Quiz

Name: _____

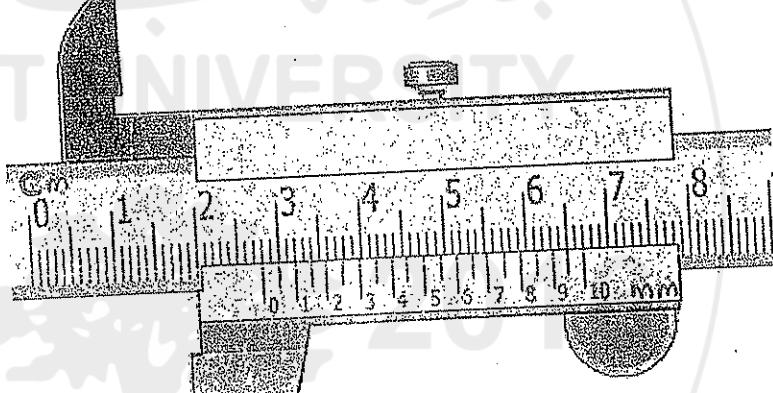

1) The reading of the micrometer is

- (a) 7.260 mm
- (b) 8.26 mm
- (c) 7.760 mm
- (d) 7.26 mm
- (e) 7.76 mm

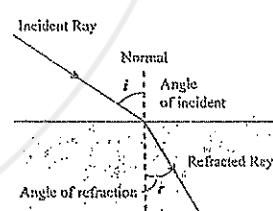

2) The reading of the vernier caliper is

- (a) 28.45 mm
- (b) 20.10 mm
- (c) 28.60 mm
- (d) 28.10 mm
- (e) 20.60 mm

3) If a student measured the angle of incidence $i = 55.7^\circ$ in air and the angle of refraction $r = 38.4^\circ$ in water, the index of refraction for water can be determined to be

- (a) 1.20
- (b) 0.83
- (c) 1.50
- (d) 0.75
- (e) 1.33
- (f) 2.0
- (g) 1.83
- (h) 1.50

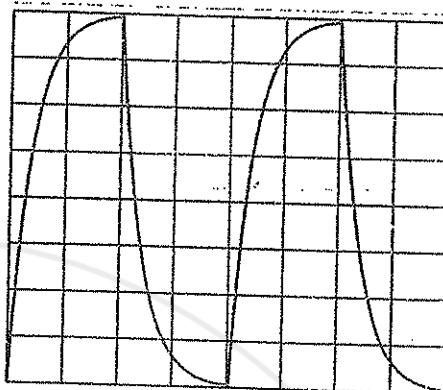

4) If the index of refraction of water is 1.33 and for glass is approximately 1.52, then the speed of light in water

- (a) is the same as the speed of light in glass.
- (b) is smaller than the speed of light in glass.
- (c) is larger than the speed of light in glass.
- (d) is larger than the speed of light in vacuum.
- (e) is the same as the speed of light in vacuum.

2) The following figure represents an oscilloscope display and showing the voltage on a capacitor of an RC circuit. If $R = 400\Omega$, and the voltage multiplier is set to 1 volt/div, while the time base is set to $50 \mu s/div$; answer the following two questions

* The time constant of the RC circuit is approximately

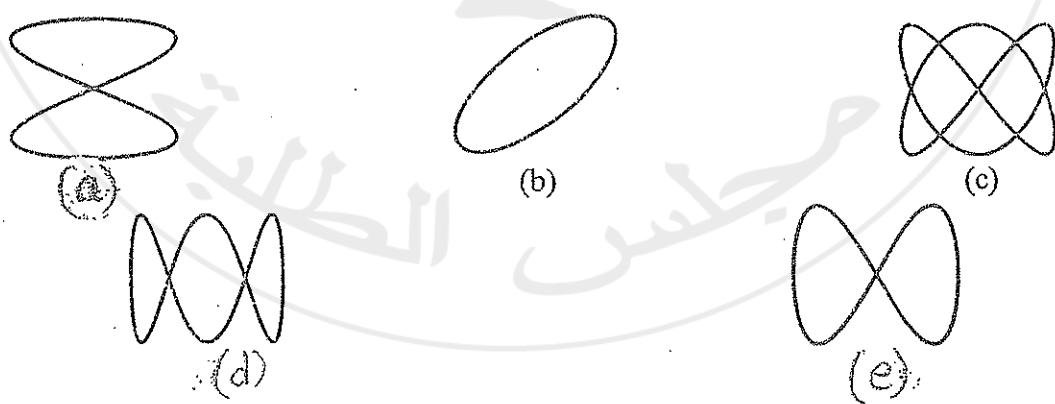

- (a) $40 \mu s$
- (b) $400 \mu s$
- (c) $100 \mu s$
- (d) $20 \mu s$
- (e) $5 \mu s$

* The value of the capacitor used in the circuit is approximately

- (a) $0.05 \mu F$.
- (b) $1.0 \mu F$.
- (c) $0.1 \mu F$.
- (d) $10 nF$.
- (e) $100 \mu F$.

3) You connected two signal generators to the oscilloscope in the external mode. The x-channel has a sinusoidal signal input with a frequency of 1000 Hz , while the y-channel has a sinusoidal signal input with a frequency of 2000 Hz . The figure that will appear on the oscilloscope display is similar to

Quiz

Focal length of a convex lens:

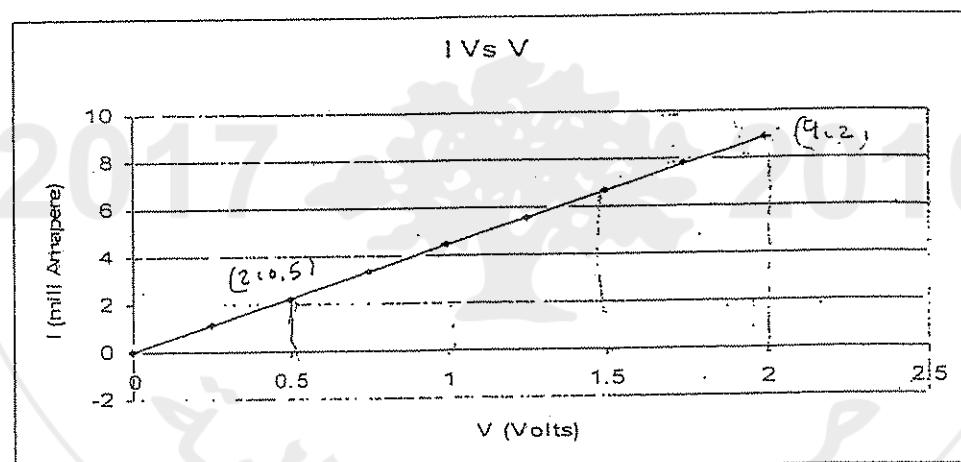

What is the physical quantity that we will measure in today's experiment?

DC circuits:

A student made the following connection in the physics lab.

And he obtained the following I-V characteristic graph by changing the value of the variable resistance connected in the circuit

$$R = R_1 + R_2$$

214.22

2

$$RI = V$$

$$I = \frac{V}{R}$$

Also he saw that the color code of the resistance number 2 was violet, green and black for the three nearby colors and the far color was silver.

$$75 \times 10^3 \Omega$$

2

1. What is the value of R_2 ?
2. What is the value of R_1 ?

~~$75 \times 10^3 \Omega$~~

$$75 \times 10^3 \Omega + 10\%$$

$$75 \pm 8$$

$$R_s = \frac{2 - 0.5}{(9 - 2) \times 10^{-3}}$$

$$R_s = 0.21$$

	A, B	C
Black	0	10^0
Brown	1	10^1
Red	2	10^2
Orange	3	10^3
Yellow	4	10^4
Green	5	10^5
Blue	6	10^6
Violet	7	10^7
Gray	8	10^8
Silver	9	10^9

$$\frac{75.5}{139} = 0.55$$

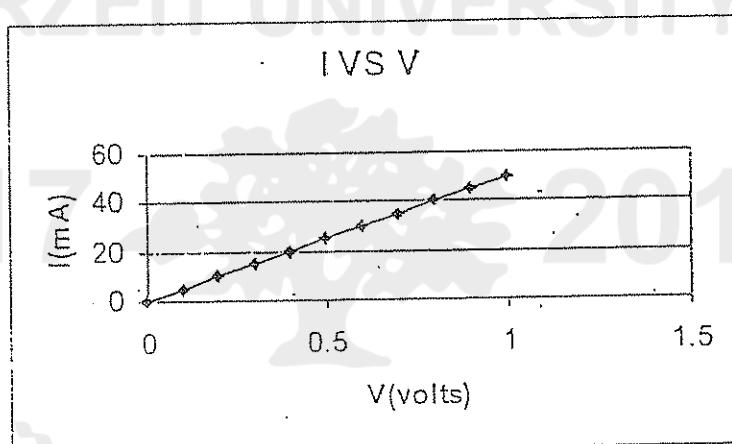

$$\frac{214.2}{75} = 75 + R$$

Also he saw that the color code of the resistance number 2 was violet, green and black for the three nearby colors and the far color was silver.

1. What is the value of R_2 ?
2. What is the value of $R_{\text{equivalent}}$ for the parallel combination of resistances?
3. What is the value of R_1 ?

NAME: _____

No.: _____

1. For the pendulum shown on the right, find out the period of oscillations T , given that $\theta = 15^\circ$, and $x = 10.35 \text{ cm}$.

$$T^2 = \frac{4\pi^2 L}{g}$$

~~$x \sin \theta = 10.35 \times \sin 15^\circ = 2.7$~~

$$\sin \theta = \frac{x}{L} \quad 0.25 = \frac{10.35}{L}$$

$$L = 41.4$$

2-Given the equation

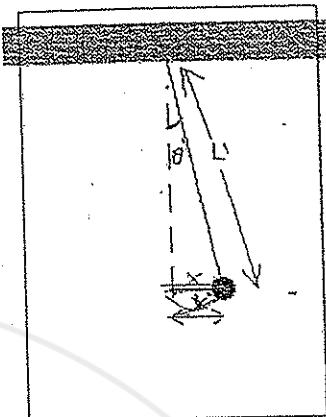

$$h = h_0 e^{-\lambda t}$$

answer the followings :-

$$T = \frac{2\pi}{\omega} = \frac{4\pi^2 L}{g}$$

$$L\theta = 10.35$$

$$T = 1.28 \text{ sec}$$

a) What type this equation is ?

b) Make a sketch for this equation (h vs. t):

c) Change the equation into linear equation.

$$\ln(h) - \ln(h_0) = -\lambda t$$

$$y_{\text{intercept}} = \ln(h_0)$$

$$\text{slope} \rightarrow -\lambda$$

$$\text{slope} \rightarrow -\lambda$$

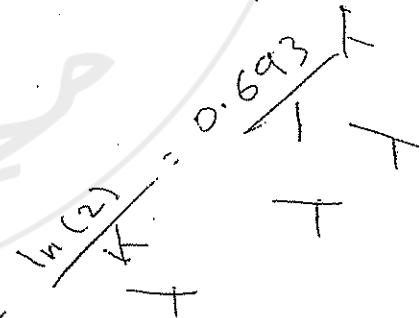

$$y_{\text{int}} = \ln(h_0)$$

d) Make another sketch for the new linear equation .

~~$\sin \theta_1 = Mg \sin \theta_n$~~

$$Mg = \frac{\sin \theta_1}{\sin \theta_n}$$

~~$\Delta Mg = \ln(1)$~~

I-V characteristic of a resistor

From the graph shown above, find:

- 1- The slope of the graph. Slope = $\frac{\Delta V}{\Delta I} = \frac{V_2 - V_1}{I_2 - I_1} = \frac{40 - 10}{5 - 1} = 7.5 \Omega$
- 2- The Value of the resistor. $R = \frac{V}{I} = \frac{40}{5} = 8 \times 10^3 \Omega$
- 3- The unit of the slope. The slope unit = $\Omega \text{hm.}^{-1}$
- 4- The unit of R. $R = \Omega$

$$\Omega = \frac{\Delta V}{\Delta I}$$

Knowing that the color code key of a resistor is as follows: Black- 0, Brown-1, Red- 2, Orange-3, Yellow-4, Green-5, Blue- 6, Violet-7, Gray- 8, White- 9. What are the colors of the resistor you got from the graph?

The colors are

- 1- The first color is ...Black.....
- 2- The second color is ...Blue.....
- 3- The third color is ...Brown.....

Focal length of a convex lens

A student drew the points he got from the focal length experiment as shown above:

1. Draw a best line for the points shown above.
2. Find the values of $1/f$ from intersections on both axes.

$$1/f_1 = 0.045 \text{ (unit)}, 1/f_2 = 0.039 \text{ (unit)}$$

3. Find the values of f ,

$$f_1 = 22.2 \text{ (unit)}, f_2 = 25.6 \text{ (unit)}$$

4. Find the best value of f

$$f = 23.9 \text{ (unit)} \quad f = \frac{1}{2} (f_1 + f_2) \\ = \frac{1}{2} (22.2 + 25.6) = 23.9 \text{ unit.}$$

5. Why do you think we got two values of f ?

Because each lens has two focal lengths.

$$\frac{1}{f_1} = 0.045 \\ 1 = 0.045 f_1 \\ f_1 = \frac{1}{0.045}$$

$$\text{Index} = \frac{\text{Speed in vacuum}}{\text{Speed in the medium}}$$

$$\text{Speed in glass} = \frac{3 \times 10^8}{1.52}$$

Q3: The index of refraction of glass is near 1.52 and the speed of light in vacuum in m/s 3×10^8 . what is the speed of light in the glass?

$$1.52 = \frac{\text{Speed in vacuum}}{\text{Speed in the medium}} \Rightarrow 1.52 = \frac{3 \times 10^8}{\text{Speed in glass}}$$

$$\text{Speed in glass} = 1.97 \times 10^8 \text{ m/s}$$

Q4: Put a circle around the correct answer:

a-In the method of least square fit .the expression for the best line is derived from:

a) $\sigma^2 = \sum_{i=1}^N (Y_i - y_i)^2$ is minimum

b) $\sigma^2 = \sum_{i=1}^N (Y_i + y_i)^2$ is maximum

c) $\sigma^2 = \sum_{i=1}^N (Y_i - y_i)^2$ is minimum

d) $\sigma^2 = \sum_{i=1}^N (Y_i + y_i)$ is maximum

b-Two pendulum with different masses m_1, m_2 and same string length (L), if you know that $m_2 > m_1$ the period of

a) first pendulum is greater than the second.

b) First pendulum is less than the second .

c) Two pendulum are the same.

$$T = 2\pi \sqrt{\frac{L}{g}}$$

Half life of a draining water column

The above graph shows the relation between the water column height ratio (h/h_0) versus time, where $h = h_0 e^{-\lambda t}$. Using this graph, answer the following questions:

1- What is the value of $t_{1/2}$?

$$\frac{h}{h_0} = e^{-\lambda t} \Rightarrow \ln\left(\frac{h}{h_0}\right) = -\lambda t$$

$$\ln(0.5) = -8 \times 10^{-3} t$$

2- What is the value of the decay constant (λ)?

$$\text{slope} = -\lambda \Rightarrow \frac{0.68 - 0.60}{40 - 20} = -8 \times 10^{-3}$$

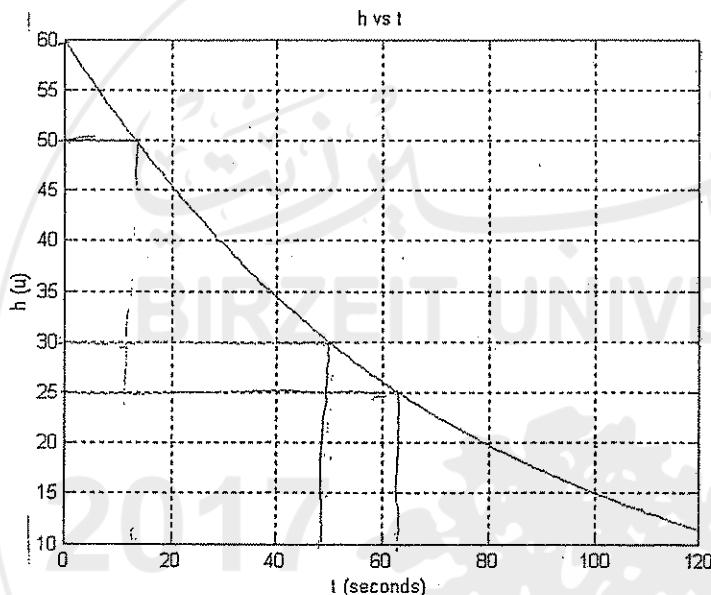

$$\Rightarrow \boxed{\lambda = 8 \times 10^{-3}}$$

Physics111
Quiz

Student Name : YASMIN HABHEM Student ID: 1070113

1-Define the half life time of a draining water column?

it is the time that is required for the water of water to contain one half quantity of the original quantity.

2-Linearize the following equation (Write in a straight line form):

$$\ln \frac{m}{m_0} = -\lambda t$$
$$\ln(m) = \ln(m_0) - \lambda t$$
$$\ln(m) - \ln(m_0) = -\lambda t$$

What is the slope and the y-intercept of the linear equation?

Slope = $\frac{\ln(m) - \ln(m_0)}{-\lambda t}$

y-intercept = $\ln(m_0)$

$\ln(m) - \ln(m_0)$

$$\ln(m) = \ln(m_0 e^{-\lambda t})$$

$$\ln(m) = \ln(m_0) + \ln(e^{-\lambda t})$$

$$\ln(m) - \ln(m_0) = \ln(e^{-\lambda t})$$

$$\ln(m) - \ln(m_0) = -\lambda t$$

3-What is the aim of today's experiment?

Slope = $-\lambda$

Half life of a draining water column

$$\begin{aligned}
 h &= h_0 e^{-\lambda t} \\
 \frac{h}{h_0} &= e^{-\lambda t} \\
 -\ln(2) &= -\lambda t
 \end{aligned}$$

The above graph shows the relation between the water column height ratio (h/h_0) versus time. Using this graph, answer the following questions:

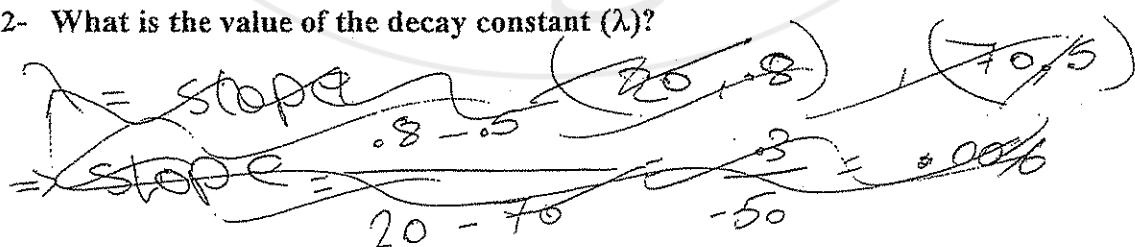

- 1- What is the value of $t_{1/2}$?

$$\begin{aligned}
 h &= h_0 e^{-\lambda t} \\
 \frac{h}{h_0} &= e^{-\lambda t} \Rightarrow -\ln(2) = -\lambda t \Rightarrow -\ln(2) = -\lambda t_1/2 \Rightarrow +0.693 = +\lambda t_1/2 \\
 \frac{t_1/2}{\lambda} &= +0.693 \quad : \lambda \quad +0.7
 \end{aligned}$$

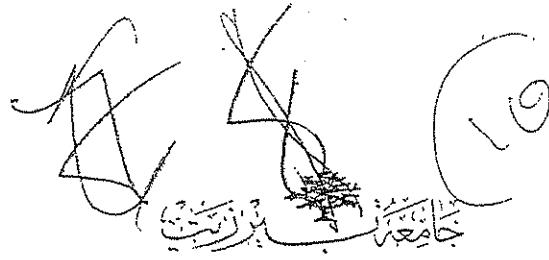

$$t_{1/2} = +0.693 \quad : \lambda$$

$$t_{1/2} = 70 \text{ sec.}$$

- 2- What is the value of the decay constant (λ)?

$$\begin{aligned}
 t_{1/2} &= \frac{+0.7}{+\lambda} \\
 \Rightarrow \lambda &= \frac{+0.7}{t_{1/2}} = \frac{+0.7}{70} = 0.01
 \end{aligned}$$

Focal length of a convex lens

The graph above shows the relation between $1/v$ (1/cm) vs. $1/u$ (1/cm). Answer the following questions:

1- The y-intercept =

- a) 0.08 (1/cm)
- b) 0 (1/cm)
- c) 0.065 (cm)
- d) 0.065 (1/cm)

2- The x-intercept =

- a) 0.08 (1/cm)
- b) 0 (1/cm)
- c) 0.06 (cm)
- d) 0.06 (1/cm)

3- The focal length of the lens found from the y-intercept =

- a) 12.5 cm
- b) 15 cm
- c) 0.065 cm
- d) 0.065 (1/cm)

4- The focal length of the lens found from the x-intercept =

- a) 12.5 cm
- b) 17 cm
- c) 0.06 cm
- d) 0.06 (1/cm)

5- The slope of this line is:

- a) positive
- b) negative
- c) no sign
- d) it depends

6- The focal length of the lens is:

- a) positive
- b) negative
- c) no sign
- d) it depends

7- If $1/u = .04 \text{ cm}^{-1}$ then $1/v =$

- a) 0.01 cm^{-1}
- b) 0.02 cm^{-1}
- c) 0.03 cm^{-1}
- d) 0.04 cm^{-1}

8- If $u = 10 \text{ cm}$, then $v =$

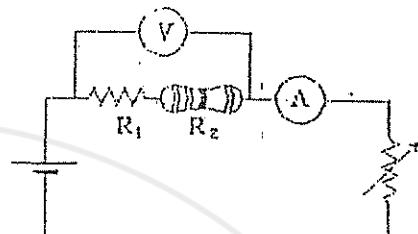

- a) 12 cm
- b) 17 cm
- c) 150 cm
- d) No real image

Q1:

Suppose you have a convex lens which has focal length 15.00cm and you put an object 20.0 cm apart from the lens and if you given the uncertainty in focal length 0.15cm and the uncertainty in the object distance 0.2cm , find the image distance and its uncertainty ?

Ans 3

$$\frac{1}{v} = \frac{1}{u} + \frac{1}{f} \Rightarrow \frac{1}{v} = \frac{1}{20} + \frac{1}{15} = 0.017$$

$$U = 20 \times 10^{-2}$$

$$DF = 0.15 \times 10^{-2}$$

$$\Delta U = 0.2 \times 10^{-2}$$

$$V = ? \quad \Delta V = ?$$

$$\cancel{\frac{\Delta U}{U} = \frac{\Delta v}{v}} \quad \cancel{\frac{\Delta U}{U} + \frac{\Delta v}{v}}$$

Q2:- Calculate the half life time from the following curve
Then Write $y = h_0 e^{-\lambda t}$, you have to find h_0 and λ .

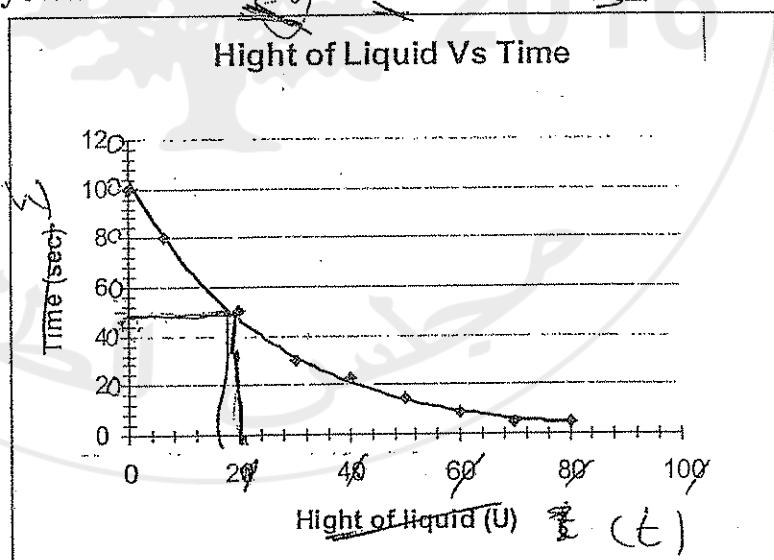

$$h_0 = 100 \text{ cm}$$

at

$$h = 50$$

$$t = 2 \text{ sec}$$

this is the half life time.

$$h_0 = 100 \text{ at } t = 0 \quad t_{\frac{1}{2}} = \log 2$$

we can take a special point at

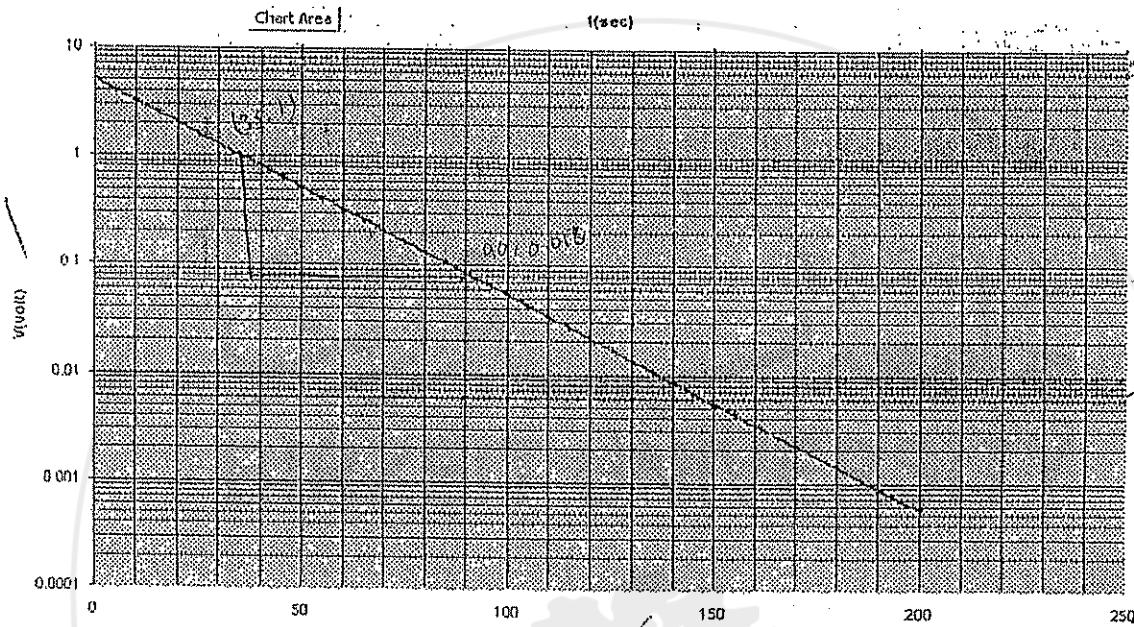

$t_{\frac{1}{2}}$ and $\frac{1}{2} h_0$

then

$$\frac{h_0}{2} = h_0 e^{-2 \times t_{\frac{1}{2}}} \Rightarrow \frac{1}{2} = e^{-2 t_{\frac{1}{2}}} \Rightarrow$$

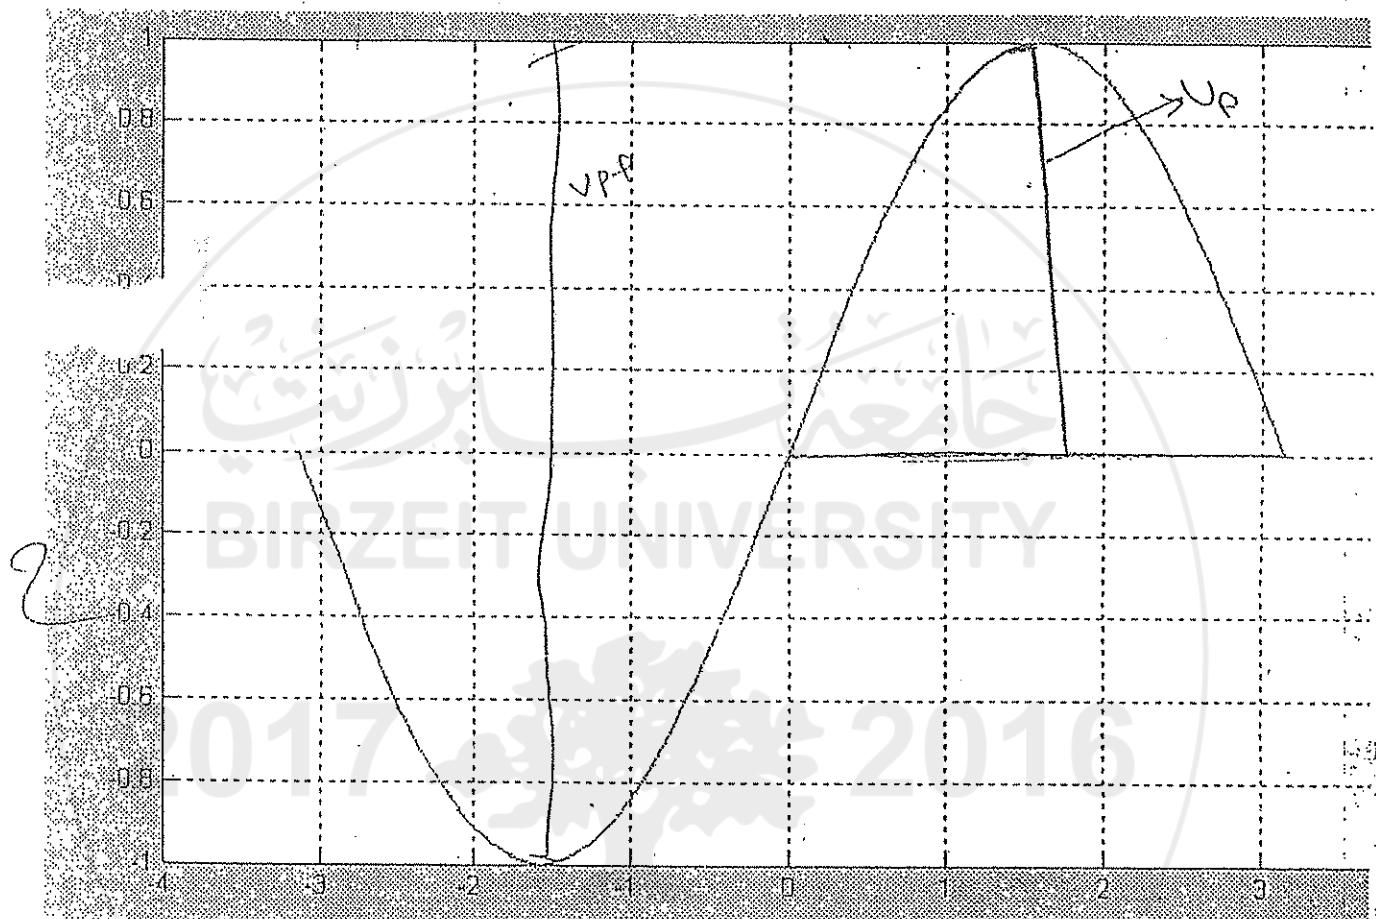

$$\ln(1) - \ln(2) = -2 t_{\frac{1}{2}}$$

- Q2) The following graph (on semi-log graph paper) is V vs t
 V = the decaying voltage of the capacitor.
 Find: the time constant τ and the maximum voltage e

$$T = \text{stop} - \frac{\ln 1 - \ln 0.013}{35-90} = -0.07$$

Q3) For the CRO graph (voltage multiplier = 2v/div; time base=50 μ sec)

- a) find the amplitude of the wave
- b) It's frequency

a) ~~Up~~ $Up = \sqrt{5 \times 0.2} = 1$ volt/div.

b) $F = \frac{1}{T} \Rightarrow \frac{1}{50 \times 10^{-3}} = 2 \times 10^4$ Hz

In figure 1, the reading of the voltmeter is (2 volts) and the reading of the ammeter is (40mA). In figure 2, the reading of the voltmeter is (2 volts) and the reading of the ammeter is (16mA). Find R_1 and R_2 . sw

$$\text{Ans} \quad P_1 = \frac{I}{V} \cdot 40 \times 10^{-3} \Omega = 20 \times 10^{-3} \Omega$$

$$R_s = R_1 + R_2 = 16 \times 10^{-3} \Omega$$

$$R_1 = \frac{V}{I} = \frac{2}{\text{max } \mu^{-3}} = 50 \text{ m}$$

$$R_s = R_1 + R_2 = \frac{V_{initial}}{I} = \frac{16}{1} = 16 \times 10^{-3}$$

$$s_0 + R_2 = 125 \Rightarrow R_2 = 125 - s_0$$

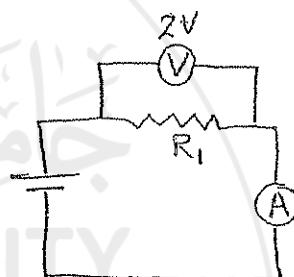

Figure 1

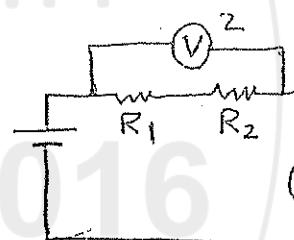

figure 2

In figure 3, if $u = 30.0\text{cm}$ and $v = 60.0\text{cm}$, find the focal length (f) of the lens.

$$\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$$

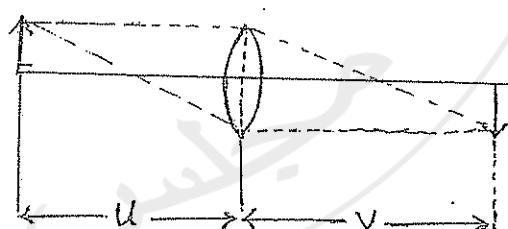

figure 3

$$\frac{1}{F} = \frac{1}{30} + \frac{1}{60} =$$

$$= 9.0333 + 0.01667 = \underline{\underline{9.05}}$$

$$\frac{1}{f} = 0.05$$

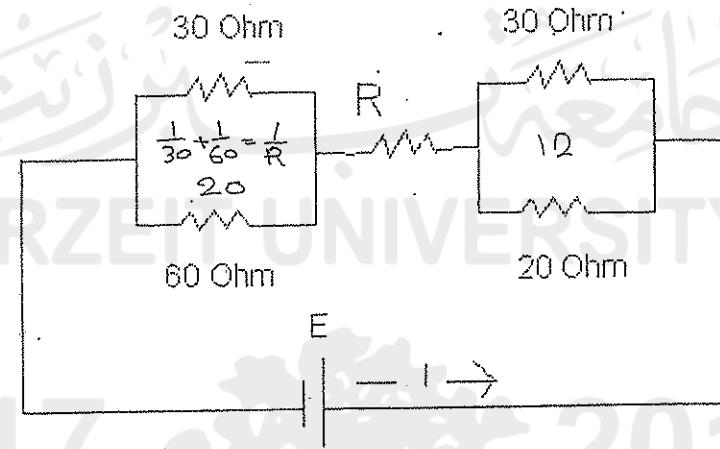

$$f = \frac{1}{0.05} = 20.0 \text{ cm}$$

- For the following circuit find the value of (R) if the value of E is 10 volts and the value of I is 0.2 Ampere.

$$R + 12 + 20 = \frac{10}{0.2}$$

$$R + 32 = 50$$

$$R = 18$$

$$\frac{1}{200} + \frac{1}{300} = \frac{300}{600+300} = \frac{1}{500}$$

$$320$$

$$V = 10 \\ I = 0.2$$

$$50 = \underline{\underline{23+2}}$$

- What's the aim of today's experiment?

Quiz #3
Physics Lab 111

1. Carbon 14 (C_{14}) is used to determine the age of fossils; its decay is given by:

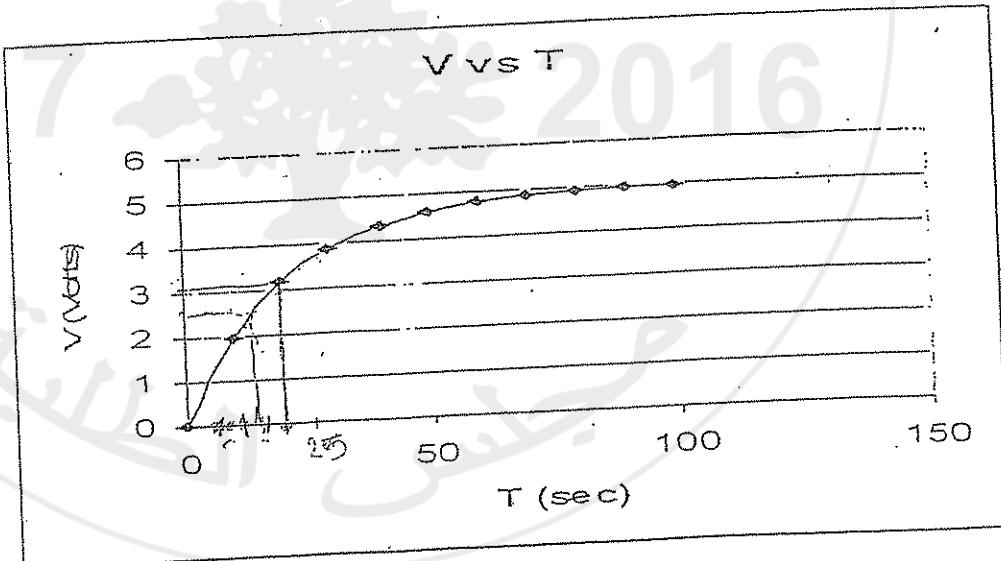

$$N(t) = N_0 e^{-\alpha t}$$

Where $N(t)$ is the number of remaining atoms at a time t ; the half life time for (C_{14}) is 5730 years.

- Find the decay constant for (C_{14}).
- What's the time required obtain half the original number of atoms (C_{14})?

$\frac{N_0}{2} = N_0 e^{-\alpha t} \quad (5730 \text{ years})$ What's the time required to have a quarter of the original number of atoms (C_{14}) undecayed?

2. A capacitor is connected in series with a resistance and voltage source that supplies the circuit with 5 volts DC, if we obtained the following graph for the charging case:

- a) Find the time constant of the circuit.
- b) If the given resistor in the circuit is 1M ohm what is the value of the capacitor used?
- c) Find the time required to charge the capacitor to half of its maximum value.

 Quiz # 3

Name: _____ No.: _____ section: _____

The graph shows the voltage on a capacitor vs time in an RC circuit in both charging and discharging processes.

- 1) Find the time constant from the charging curve (τ_c).

$$\text{Charging} = 0.02 \text{ sec}$$

$$V_{max} = 5 \times 0.63 = 3$$

$$C = 0.02$$

- 2) Find the time constant from the discharging curve (τ_d).

$$V_{max} = 5 \times 0.37 = 1.85$$

$$\tau = 0.025 \text{ sec}$$

- 3) If $R=1\text{Kohm}$, find the value of C .

$$R = 1000 \Omega$$

$$\tau = RC$$

$$\frac{0.02 + 0.025}{2} = 1000 \times C \Rightarrow C$$

- 4) Find the half life time and λ for the discharging curve.

$$\frac{t_1}{2} = \tau \ln 2$$

- 5) Explain the relation between λ and time constant τ in the discharging curve.

$$\frac{t_1}{2} = \frac{\ln 2}{\lambda}, \tau = \frac{1}{\lambda}$$

$$t_1 = \tau \ln 2$$

1. In RC circuit, $R = 1 \text{ M Ohm}$, $C = 22 \text{ Micro Farad}$, Find the Time constant τ .

$$t = RC$$
$$R = 1 \times 10^6 \text{ Ohm}$$

$$\Rightarrow \tau = 1 \times 10^{-6} \times 22 = 2.2 \times 10^{-5} \text{ sec}$$

$1 \text{ M Ohm} = 10^{-6} \text{ Ohm}$

2. In RC circuit with a constant C , how can we increase the time constant?

$t = RC$ if C constant \Rightarrow the time constant will increasing when R increasing

3. $Q = Q_0 e^{-t/RC}$. What is the shape of the graph between Q and t ?

4. What should we do to get a straight line while drawing a graph that shows the relation between the Voltage of the capacitor and the time (Voltage vs. time)?

~~RC circuit~~ dis change of ~~i~~ RC circuit and drawing of ~~a~~

Date,

Block	0	None	$\pm 20\%$
Brown	1	Silver	$\pm 10\%$
Red	2	Gold	$\pm 5\%$
Orange	3	Red	$\pm 2\%$
Yellow	4		
Green	5		
Blue	6		
Violet	7		
Gray	8		
White	9		

Block + Gold

Brown Yellow x 10

14

$$14 \times 10 + 5\% = 14 + 0.7 = 14.7$$

R = B + Y Black G.

Brown Yellow Black Gold

In the adjacent plot several voltages (V) and their corresponding currents (I) are recorded for the circuit shown above. Use the plot to find the value of R.

$$\frac{DU}{DI}$$

$$R_s = \frac{15 - 5}{10} = \frac{10}{50 - 20} = \frac{10}{30 \times 10^3} = 0.333 \Omega = 312.5 \Omega$$

$$R_s = 312.5 \Omega$$

$$R_1 = R_s - R_2$$

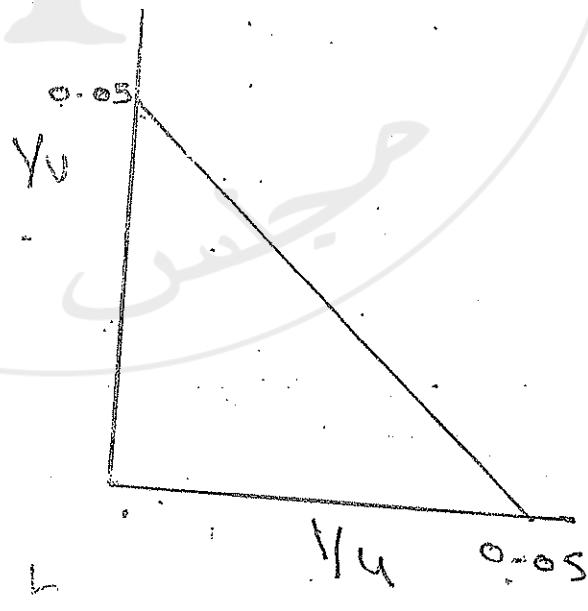

$$\Rightarrow \text{From the graph } = 312.5 - 208.5 = 104 \Omega$$

Find F

$$F_y = \frac{1}{0.05} = 20 \text{ cm}$$

$$F_x = \frac{1}{0.05} = 20 \text{ cm}$$

$$\frac{F_x + F_y}{2} = 20$$

Q1: Suppose you have a convex lense which has focal length 15cm and you put an object in front of it so that the distance between the object and lense 20cm where will the image produce?

$$f = 15 \text{ cm}$$

$$u = 20 \text{ cm}$$

$$\frac{1}{f} = \frac{1}{u} + \frac{1}{v}$$

$$\frac{1}{15} = \frac{1}{20} + \frac{1}{v}$$

$$\frac{1}{15} = \frac{20+v}{20v} \quad | \cdot 20v \Rightarrow 20v = 300 + 15v$$

$$\Leftrightarrow v =$$

$$5v = 300$$

$$v = 60 \text{ cm}$$

$$\frac{1}{15} = \frac{1}{20} + \frac{1}{v}$$

$$\frac{1}{15} = \frac{1}{15} - \frac{1}{20} \Rightarrow v = 60 \text{ cm}$$

Q2: Student do experiment no. 5 the following data was obtained.
 $f = 14.774 \text{ cm}$, $u = 20 \text{ cm}$, $v = 30 \text{ cm}$, $\Delta u = \Delta v = 0.2 \text{ cm}$. Calculate the uncertainty in f (Δf)
And write the final result as $f \pm \Delta f$

$$f = 14.774 \text{ cm}$$

$$u = 20 \text{ cm}$$

$$v = 30 \text{ cm}$$

$$\Delta f = ?$$

$$\Delta f = f^2 \left[\frac{\Delta v}{v^2} + \frac{\Delta u}{u^2} \right]$$

$$(14.774)^2 \left[\frac{0.2}{30^2} + \frac{0.2}{20^2} \right] \quad \Delta u = \Delta v = 0.2 \text{ cm}$$

$$\frac{\Delta f}{f^2} = \frac{\Delta u}{u^2} + \frac{\Delta v}{v^2}$$

$$\Delta f = \sqrt{\left(\frac{0.2}{20^2} + \frac{0.2}{30^2} \right)} \quad (14.774)^2$$

$$\Delta f = 0.157$$

$$30, 2$$

Q3: What is the physics law you will apply today?

Law of reflection
Newton's law
Law of refraction

1. It's known that the speed of light in vacuum is 3×10^8 m/s, and it is known that in plastic the speed of light is 2.06×10^8 m/s, find the index of refraction of plastic.

$$n = \frac{3 \times 10^8}{2.06 \times 10^8} = 1.4$$

Q2: Put a circle around the correct answer:

In the method of least square fit .the expression for the best line is drivated from:

$$\sigma^2 = \sum_{i=1}^N (Y_i - y_i)^2 \text{ is minimum}$$

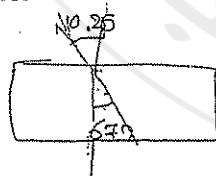

$$\sigma^2 = \sum_{i=1}^N (Y_i + y_i)^2 \text{ is maximum}$$

$$\sigma^2 = \sum_{i=1}^N (Y_i - y_i)^2 \text{ is minimum}$$

$$\sigma^2 = \sum_{i=1}^N (Y_i + y_i)^2 \text{ is maximum}$$

$$\sum (Y_i - y_i)^2 \text{ is minimum}$$

3. A beam of light passes from air to a block of glass If the angle of incident is 10.25° , and the angle of refraction is 6.72° . Find the index of refraction of the glass giving that the index of refraction of air is 1.

$$n_A \sin 10.25^\circ = n_g \sin 6.72^\circ$$

$$n_g = 1.52$$
