Quiz#4

Name and ID [redacted]

1) When three fatty acids link to a glycerol molecule by covalent bonds a triacylglycerol (or triglyceride) is formed.

(A) True (B) False

2) All lipids are hydrophilic

(A) True (B) False

3) Fatty acids could be saturated or unsaturated fatty acids. What is the main difference between them?

the difference is with the group that compond withe the third carbon ?!

glesarol compond with fatty acid and on phosphat group (Phospho lipids)

glesarol [C — Faty acid; C — Faty acid; C (P) — phosphor gro] phospho lipids

C — Faty acid; C — faty acid; C (g) → [redacted]

-2

4) What is the main function of lipids?

[redacted] glesarol and fatty acid compond with covalent bonds

5) Proteins are the macromolecules that actually do work in the cell. Name two of their functions?

1. [redacted] Storage

2. transport

[redacted] ils on the cell Wall
