

Soil Mechanics

HW10

Name: Mohammad Al-Swaity

ID: 1181136

Problem ①: $S_E = z \frac{B(1-M_s^2)}{E_s} If$

$$25 * 10^{-3} = \frac{600 * B * (1-0.3)^2 * 0.65}{B^2 * 20600}$$

$$\rightarrow B = 0.689 \text{ m}$$

$$B * B = (0.689 * 0.689) = 0.475 \text{ m}^2$$

Problem ②: ① Attach with The Excel Sheet

② $C_c = 170 \text{ KN/m}^2$ using Casagrande's method

$$③ C_c = \frac{c_1 - c_2}{\log \frac{6_1}{6_2}} = \frac{0.755 - 0.65}{\log \left(\frac{1600}{800} \right)} = 0.35$$

$$C_s = \frac{0.658 - 0.65}{\log \left(\frac{1600}{800} \right)} = 0.026$$

~~QWIK~~ $\frac{C_s}{C_c} = 0.074$

11

$$\text{Problem ③: (a)} \Delta \delta' = \frac{P}{BL} = \frac{350}{(2.5)^2} = 56 \text{ kN/m}^2$$

$$\begin{aligned}\delta'_0 &= (\gamma_{d(\text{sand})} D_f) + (\gamma_{\text{sat}(\text{sand})} - \gamma_w)(H+D_f) + \\ &\quad (\gamma_{\text{sat}(\text{clay})} - \gamma_w)\left(\frac{H_2}{2}\right) \\ &= (16.4 * 2) + (18.8 - 9.81)(3-2) + (17.6 - 9.81)\left(\frac{4.5}{2}\right) \\ &= 59.32 \text{ kN/m}^2\end{aligned}$$

$$\begin{aligned}S_c &= \frac{C_c \cdot H}{1+c_0} \left[\frac{\delta'_0 + \Delta \delta'}{\delta'_0} \right] \\ &= \frac{0.35 (4.5)}{1+0.82} \log \left[\frac{59.32 + 56}{59.32} \right] \\ &= \cancel{0.289} \quad 0.25\end{aligned}$$

$$(b) \quad C_c = \frac{\Delta e}{\log \left[\frac{\delta'_0 + \Delta \delta'}{\delta'_0} \right]}$$

$$0.35 = \frac{\Delta e}{0.289}$$

$$\rightarrow e_f = 0.10115 + c_0$$

$$\rightarrow e_f = 0.92115$$

$$(c) \quad S_c = \frac{0.02}{1+87} * 4.5 \log \left(\frac{6}{25} \right) = 0.02$$
