Second hour exam

Spring 2012

Name: ~~XXXXXXXXXX~~

Number: ~~XXXXXXXXXX~~

section: 1

Question #1 (36%) Prove or disprove each of the following statements

a) If $A \neq \emptyset$ and $A \times B = A \times C$ then $B = C$

\square Suppose: $A \times B = A \times C$ and $b \in B$

The statement is true.

Let $a \in A$ $(a, b) \in A \times B$

$\Rightarrow (a, b) \in A \times C$ (since $A \times B = A \times C$)

proof:
(Direct)

Let $A \neq \emptyset$ and $A \times B = A \times C$

$a \in A, b \in B, c \in C$

$\Rightarrow (a, b) \in A \times B$ if $(a, c) \in A \times C \Rightarrow a \in A$ and $b \in C$

$\Rightarrow (a, b) = (a, c)$

$\Rightarrow b = c$

$\Rightarrow b \in B, b \in C$

$\Rightarrow B = C$

\square Suppose $A \times B = A \times C$ and $c \in C$

Let $(a, c) \in A \times C$ let $(x, x) \in R \cup S$

$\Rightarrow (a, c) \in A \times B$

$\Rightarrow a \in A$ and $c \in B$

Let $x \in A \Rightarrow \begin{cases} (x, x) \in R \\ (x, x) \in S \end{cases}$

$\Rightarrow (x, x) \in R \cup S$

\Rightarrow ref.

Let $\begin{cases} (x, y) \in R \\ (x, y) \in S \end{cases} \Rightarrow \begin{cases} (y, x) \in R \\ (y, x) \in S \end{cases}$

$\Rightarrow (y, x) \in R \cup S$

\Rightarrow Sym.

transitive \square Let $a, b, c \in A$

b) If f and g are functions then $f \cup g$ is a function

The statement is false.

Counter example =

$f = \{(1, 2), (3, 4)\} \Rightarrow$ function

$g = \{(1, 5), (4, 6)\} \Rightarrow$ function

$f \cup g = \{(1, 2), (1, 5), (3, 4), (4, 6)\} \Rightarrow$ not function

because $f \cup g(1) = 2$ or 5 (not one value)

c) If R and S are equivalence relations on A then $R \cup S$ is an equivalence relations on A

The statement is true.

~~Let R, S eq. relation on $A \Rightarrow R \cup S$ is eq. relation~~

~~Proof = $R \cup S$~~

~~$A = \{1, 2, 3\}$~~

~~$R = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1)\}$~~

~~$S = \{(1, 1), (2, 2), (3, 3), (3, 1), (1, 3)\}$~~

~~$R \cup S = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1), (3, 1), (1, 3)\}$~~

~~$(2, 1) \in R, (1, 3) \in S$~~

~~$(2, 3) \notin R \cup S$~~

~~but $(2, 3) \in R \cup S$~~

~~Let $x \in A \Rightarrow (x, x) \in R$ and $(x, x) \in S$~~

~~$\Rightarrow (x, x) \in R \cup S$~~

~~$\Rightarrow R \cup S$ is ref.~~

~~Let $(x, y) \in R$ and $(x, y) \in S$~~

~~$\Rightarrow (y, x) \in R$ and $(y, x) \in S$~~

~~$\Rightarrow (y, x) \in R \cup S$~~

~~Let $(x, y) \in R$ and $(y, z) \in S$~~

~~$\Rightarrow (x, z) \in R \cup S$~~

~~$\Rightarrow R \cup S$ is trans.~~

(because R and S are equivalence relations)

$\Rightarrow R \cup S$ is Sym.

Let $\begin{cases} (x, y) \in R \\ (x, y) \in S \end{cases} \Rightarrow \begin{cases} (y, x) \in R \\ (y, x) \in S \end{cases}$

$\Rightarrow (y, x) \in R \cup S$

$\Rightarrow R \cup S$ is trans.

d) If f^{-1} is a function then f is one to one function

The statement is false.

Suppose f is a function
 and suppose f^{-1} is a function
 $f = \{(1,1), (2,1), (3,1)\}$
 $f^{-1} = \{(1,1), (1,2), (1,3)\}$
 f^{-1} is not one to one
 $\Rightarrow f^{-1}$ is not a function $\Rightarrow f$ is not one to one

Counter example
 $f^{-1} = \{(1,1), (2,1), (3,1)\}$
 $f = \{(1,1), (1,2), (1,3)\}$
 f is not a function and not 1-1.
 $f^{-1}(1) = \{1, 2, 3\}$
 f^{-1} is not a function

e) If R and S equivalence relations on A then $R \circ S$ is an equivalence relations on A

The statement is true.

Proof:

$(x, y) \in R \circ S \Rightarrow \exists w \in A; (x, w) \in R \wedge (w, y) \in S$
 $\Rightarrow (w, x) \in R \wedge (y, w) \in S$

$\Rightarrow (y, x) \in R \circ S \Rightarrow$ Sym.

$(x, x) \in R \circ S \Rightarrow x \in A; (x, x) \in R \wedge (x, x) \in S$
 $\Rightarrow (x, x) \in R \circ S$
 $\Rightarrow R \circ S$ is an eq. relation (ref)

Let $x \in A \Rightarrow (R \circ S)(x) = R(S(x)) = R(x) \Rightarrow x$
 $\Rightarrow R \circ S$ is a reflexive relation

$(x, y) \in R \circ S \wedge (y, z) \in R \circ S$

$\Rightarrow (x, x) \in R \circ S \Rightarrow$ Reflexive
 $A = \{1, 2, 3\}$

$\Rightarrow R(S(x)) = w \wedge R(S(w)) = y$
 $\Rightarrow R \circ S$

$R = \{(1,1), (2,2), (3,3), (1,2), (3,1)\}$
 $S = \{(1,1), (2,2), (3,3), (2,1), (1,2)\}$

$R \circ S = \{(1,1), (1,3), (2,2), (3,3), (3,1), (2,3), (1,2)\}$

f) If R is a relations on A and $R \circ R \subseteq R$ then R is transitive relations

The statement is true.

Let $(x, y) \in R, (x, y) \in R \circ R \Rightarrow \exists w \in \text{Dom}(A); (x, w) \in R \wedge (w, y) \in R$

Suppose $R \circ R \subseteq R$ and suppose $(x, y) \in R \circ R \Rightarrow (x, y) \in R$

$(2,3) \in R \circ S$ but $(2,3) \notin R$

$(x, z) \in R \circ R$
 $\Rightarrow (x, z) \in R$ (since $R \circ R \subseteq R$)
 $\Rightarrow R$ is transitive

$R \circ R = \{(1,1), (1,2), (2,2)\}$
 $R \circ R \subseteq R$

$C = \{c_1, c_2, c_3\}$

ref: $(c, c) \in R$
 sym: $(c, D) \in R$ # of element $c = 12 \cup D$

$(D, c) \in D^D \bar{X} = \{ \{c\}, \{a\}, \{b\}, \{c\}, \{a,b\}, \{a,c\}, \{b,c\}, \{a,b,c\} \}$

Question #2 (14%) Let $A = \{a, b, c\}$, define R on $X = P(A)$ as follows
 $R = \{ (C, D) \in X \times X : \text{number of elements of } C = \text{number of elements of } D \}$

a) Show that R is an equivalence relation on X

let $C \in X, D \in X$
 $\Rightarrow (C, C) \in X \times X$
 $\Rightarrow R$ is ref.

let $(C, D) \in X \times X \Rightarrow C \in X \wedge D \in X$
 $\Rightarrow D \in X \wedge C \in X$
 $\Rightarrow (D, C) \in X \times X$
 $\Rightarrow R$ is sym.

let $(C, D) \in R \wedge (D, E) \in R \Rightarrow C \in X \wedge D \in X \wedge D \in X \wedge E \in X$
 $(C, D) \quad (D, E) \quad \Rightarrow C = D \quad \Rightarrow D = E$
 $\Rightarrow C = E$
 $\Rightarrow (C, E) \in R$
 $\Rightarrow R$ is trans.

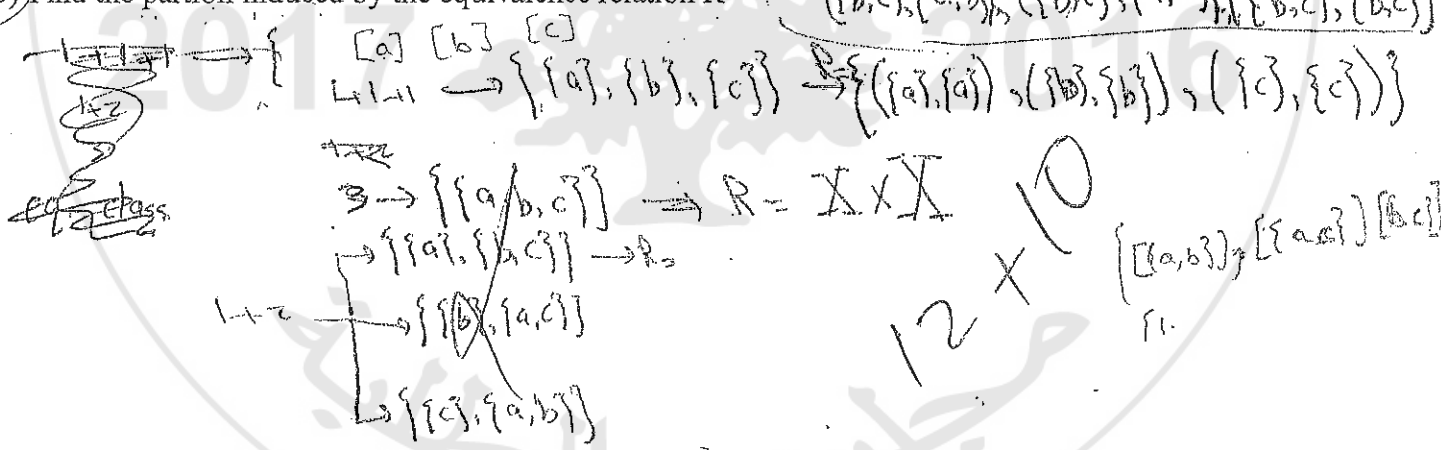

$R_1 = \{ (\{a\}, \{a\}), (\{a\}, \{b\}), (\{a\}, \{c\}), (\{b\}, \{b\}), (\{b\}, \{c\}), (\{c\}, \{c\}) \}$
 $R_2 = \{ (\{a,b\}, \{a,b\}), (\{a,b\}, \{a,c\}), (\{a,b\}, \{b,c\}), (\{a,c\}, \{b,c\}), (\{a,c\}, \{a,b,c\}), (\{b,c\}, \{a,b,c\}) \}$
 $R_3 = \{ (\{a,b,c\}, \{a,b,c\}) \}$

b) find $[b]$

$[b] = \{ \{a,b\}, \{a,c\}, \{b,c\} \}$
 $(b, c) \in R$

$\therefore R$ is equivalence relation on X
 $R_1 = \{ (\{a,b\}, \{a,b\}), (\{a,b\}, \{a,c\}), (\{a,b\}, \{b,c\}), (\{a,c\}, \{a,b\}), (\{a,c\}, \{a,c\}), (\{a,c\}, \{b,c\}), (\{b,c\}, \{a,b\}), (\{b,c\}, \{a,c\}), (\{b,c\}, \{b,c\}) \}$

c) Find the partition induced by the equivalence relation R

Question #3 (10%) Let $A = \{1, 2, 3, 4\}$ and let $P = \{ \{1, 2\}, \{3\}, \{2, 4\} \}$

Find if possible an equivalence relation R on A such that

$A/R = P$ justify your answer

P is not partition because $\{1, 2\} \cap \{2, 4\} = \{2\}$ but $\{1, 2\} \neq \{2, 4\}$
 $\Rightarrow P$ is not equ. Relation.

$R = \{ (a, a), (b, b), (c, c), (a, a), (b, b) \}$

Question #4(10%) Use the graph of the functions f , and g to indicate on the graph the value of $(f \circ g)(x)$ and $(g \circ f)(x)$

Question #5(15%) Let A, B, C be nonempty set and let $f: A \rightarrow B, g: B \rightarrow C$ be functions.

a) Show that if $g \circ f$ is onto then $g: B \rightarrow C$ is onto.

(5/7) \Rightarrow Let $(a, c) \in g \circ f \Rightarrow \exists b \in B; (a, b) \in f \wedge (b, c) \in g$
 $\Rightarrow \forall c \in C; \exists b \in B; g(b) = c$
 $\Rightarrow g$ is onto.

Suppose $g \circ f$ is onto and ~~suppose~~ let $c \in C$

$\Rightarrow \exists a \in A; g \circ f(a) = c$
 $\Rightarrow g(f(a)) = c$
 $\exists b \in B; f(a) = b$
 $\Rightarrow g(b) = c$
 $\Rightarrow g$ is onto.

Suppose $(g \circ f)$ is onto and suppose $c \in C$.
 $\Rightarrow \exists a \in A; (a, c) \in g \circ f$
 $\Rightarrow f(g(a)) = c$

c) Show that the converse of (a) is not true

Converse: if $g: B \rightarrow C$ is onto then $g \circ f$ is onto $\Rightarrow \exists b \in B; f(a) = b, g(b) = c$
 $f = \{(1, 4), (2, 4), (3, 5)\}$
 $g = \{(4, 7), (5, 8), (6, 9)\}$
 $g \circ f = \{(1, 7), (2, 7), (3, 8)\}$
 $y = 9 \notin \text{Rang}(g \circ f)$

Converse: if g is onto then $g \circ f$ is onto.

25

Question #6(15%) Let A, B, C be nonempty set and let $f: A \rightarrow B, g: B \rightarrow C$ be functions.

a) Show that if f, g are one to one functions then $g \circ f: A \rightarrow C$ is one to one.

~~Let $(a_1, c) \in g \circ f \Rightarrow \exists b \in B; (a_1, b) \in f \wedge (b, c) \in g$~~
 suppose f, g is 1-1
~~and suppose $f(x) = f(y)$~~
 ~~$\Rightarrow g(f(x)) = g(f(y))$~~
 ~~$\Rightarrow g \circ f(x) = g \circ f(y)$~~
 ~~$\Rightarrow f(x) = f(y)$~~
 ~~$\Rightarrow x = y$~~

~~Let $(a_1, c) \in g \circ f \Rightarrow \exists b \in B; (a_1, b) \in f \wedge (b, c) \in g$~~
~~Let $(a_2, c) \in g \circ f \Rightarrow \exists b \in B; (a_2, b) \in f \wedge (b, c) \in g$~~
~~Let $(a_1, c) \in g \circ f \Rightarrow (g \circ f)(a_1) = (g \circ f)(a_2)$~~
 ~~$\Rightarrow g(f(a_1)) = g(f(a_2))$~~
 ~~$\Rightarrow f(a_1) = f(a_2)$~~
 ~~$\Rightarrow a_1 = a_2$~~
 ~~$\Rightarrow g \circ f$ is 1-1~~

a) let $(g \circ f)(a_1) = (g \circ f)(a_2)$
 $\Rightarrow g(f(a_1)) = g(f(a_2))$
 g is 1-1 $\Rightarrow f(a_1) = f(a_2)$
 f is 1-1 $\Rightarrow a_1 = a_2$
 $\Rightarrow g \circ f$ is 1-1

c) Show that the converse of (a) is not true

converse: If $g \circ f$ is 1-1 then f, g is 1-1

for $f = \{(1,3), (2,5)\}$

$g = \{(3,6), (4,6), (5,7)\}$

$g \circ f = \{(1,6), (2,7)\}$

$g \circ f$ is 1-1

but g is not one to one.
