

## \*\* Introduction

### ⇒ Symmetric Encryption

$$** \textcircled{1} \quad \Sigma(K, m) = c$$

\* Encryption.

$$** \textcircled{2} \quad D(K, c) = m$$

\* Decryption.

→ Encryption algorithm (publicly known)

⇒ Never use a proprietary ~~cipher~~ cipher.

↳ Single use key (key always changes) ~~as it is public~~

public.

### \*\* 2 - cases

① Single use key.

-email-

② Multi use key

-encrypted files.

→ need more machines ~~machines~~

Single use ~~use~~  
key.

\*\* cases all depend on what is used, ~~single use key~~ ~~single use key~~

\*\* Cryptography: Fantastic for protecting info.

→ but it has limitations.

①

① Software bugs

→ not the solution for all security problems.

→ for example (software bugs).

2. Social engineering attacks. (Attacker will

(phish emails)

✓ \* Security problems في لغة Cryptography :-

• [2] Crypt. becomes useless if it's implemented incorrectly

• [3] Crypt. is not something you should try to invent and design. \* حسناً انتي بحسب على اختراعه !!  
Standards (= Crypt. ) في الواقع \* \*

\* \* Crypto core المفهوم:

{ 1. Secret Key establishment انتاج المفتاح السري.

2. Secure communication. اتمام الاتصال

• Encryption schemes provide both security  
confidentiality & integrity. يتوفر السرية والتزامنة

→ Crypto can do more.

⇒ 1. Digital signature. التوقيع الكتروني.

التوقيع بالوضع العادي (Digital Signature) كل من يراها يراها

ممكن cut/copy (يمكنه) attackers (attackers can't)

!! paste

\* Function of the content side no dig. sign. في الواقع  
being signed.

فهي لا تحرر محتوى المنشئ الموقوع عليه من attackers

فهي لا تحرر المنشئ الموقوع عليه من attackers

## ⇒ ② Anonymous communication. (Bidirectional)

تعني تبادل اتصالات بين سيرفرات (server to server) اعتماد على مزود الخدمة.

Ex: Anonymous digital cash. المفهوم هو خرمانة مجهولة.

(Alice) تواجه توافقها (Bob و Carol). نحن سنترجم توافقها (Bob و Carol).

!! Alice needs (coin) لتجنب الافتن duplicate for

(see later) spins the coin once. ← Alice. نحن سنأخذ زهرة.

## oo Protocols.

### \* - Elections. (الانتخابات)

Encryption (النحو على) (election center) في الامثلية (election center) في الامثلية.

Inputs (البيانات) دفعات متساوية، يمثل الفائز. (winner) . وحدات

### \* - Private auctions. (المزاد)

Secure multi-party computation. تأمين المزادات بين الأطراف.

Function  $f$ ; election center  $\rightarrow$  election center

يعنى بمعنى كل طرف يدخل (as individual) inputs

كل طرف يدخل inputs (trusted authority) على شكل

### \* - Crypto magic.

#### ① privately outsourcing computation. الاتجاه يتجاهل خارج المكان

Encryption  $E \rightarrow$  query, performing query receives on Alice the

plaintext  $\rightarrow$  query, receives on Alice the result  $\in E(\text{query})$

REDMI NOTE 9 AI QUAD CAMERA

- ② • Zero Knowledge. (proof of knowledge).

عن الـ Factorization،  $N = p \cdot q$

$N$  رقم Alice

ما يجهزني بالمعنى: Alice  $\rightarrow$  prove  $\exists$   $p, q$  such that  $N = p \cdot q$  (يُعرف Bob)

( $p, q$ ) Factors of  $N$  such that  $N = p \cdot q$

\* \* \* ٣ خطوات

- Crypto is a rigorous science (پرسا).

\* \* 3 steps:-

{ ① Precisely specify exp. (what the attacker can do to attack a digital sig.)  
threat model

من وهمي!

② Propose a construction.

اقتراح بناء

③ Prove that breaking  $\rightarrow$  under threat model

will solve an underlying hard problem

\* \* History.

- Symmetric ciphers

(shared secret key  $p, q$ ): بـ  $p, q$  بين Bob, Alice

(key  $p, q$ ) Alice, Bob // secret key  $p, q$  available to attacker

Symmetric.

8 hrs of time.

# Keys =  $2^{56}$ , blocksize = 64 bits

- because use small key space  $\Rightarrow$  these days can be broken by brute-force  $\therefore$  Insecure.

128 bit keys now: AES is Secure

### Exp (Vigenere Cipher)

$\rightarrow m = \text{"Hello There"}, K = \text{"ITEMAM"}$

Sol. \*  $m = \text{Hello There}$  }  $\xrightarrow{\text{+}}$   $\begin{matrix} \text{I} \\ \text{T} \\ \text{E} \\ \text{A} \\ \text{M} \end{matrix}$   $\begin{matrix} \text{I} \\ \text{T} \\ \text{E} \\ \text{A} \\ \text{M} \end{matrix}$   $\xrightarrow{\text{+}}$   $\begin{matrix} \text{H} \\ \text{e} \\ \text{l} \\ \text{l} \\ \text{o} \\ \text{ } \\ \text{T} \\ \text{h} \\ \text{e} \\ \text{r} \\ \text{e} \end{matrix}$

Alphabet  $\mathcal{U}$   
 $\begin{matrix} 0 & 1 & 2 & 3 \\ a & b & c & d \end{matrix}$

- Finite Set  $\mathcal{U} = \{0, 1\}^n$

$$\text{Exp} \quad \{0, 1\}^2 \Rightarrow \{00, 01, 10, 11\}$$

$$P : \mathcal{U} \rightarrow [0, 1] \quad y_0 \quad y_1 \quad y_2 \quad y_3 = 1$$

$$\text{prob} \quad \sum P(X) = 1 \quad \frac{1}{2} \quad \frac{1}{8} \quad \frac{1}{4} \quad \frac{1}{8} = 1$$

- Uniform dis

$$P(X) = 1 / |\mathcal{U}|$$

- Point dist. at  $x_0$

$$P(X_0) = 1 \quad \forall X \neq X_0 \quad P(X) = 0$$

\*\* Events.  $\text{A} \subseteq \text{U}$   $\Pr[\text{A}] = \sum_{x \in \text{A}} \text{P}(x) \in [0, 1]$

is event.

$$\therefore \text{U} = \{0, 1\}^8 \quad \therefore |\text{U}| = 2^8 = 256.$$

$$\therefore \text{A} = \{ \text{lsb}_2(x) = 11 \}$$

$01011010$   
 $01011011$  not A  
 $\downarrow$  A

$$\therefore \Pr[\text{A}] = \frac{1}{4} = 64 \times \frac{1}{256}$$

\*\* Union Bound  $\text{A}_1 + \text{A}_2$  (events).

$$\Pr[\text{A}_1 \cup \text{A}_2] \leq \Pr[\text{A}_1] + \Pr[\text{A}_2]$$

$$\text{A}_1 \cap \text{A}_2 = \emptyset$$

$$\therefore \text{if } \text{A} \neq \text{B} \text{ and indep} \quad \therefore \Pr[\text{A} \neq \text{B}] = \Pr[\text{A}] \cdot \Pr[\text{B}]$$

## \* Stream Cipher (chapter -2-)

$$\begin{array}{l} \bullet \quad E : K \times m \rightarrow C, \quad D : K \times C \rightarrow m \\ \therefore D(K, \underbrace{E(K, m)}_C) = m \end{array}$$

$\Rightarrow E$  is often randomized /  $D$  is always Deterministic

### \* The one Time Pad \*

$$\bullet \quad m = C = \{0,1\}^n \quad \text{key space} = \text{message space } \{0,1\}^n$$

$\Leftrightarrow$  Key = (random bit string as long as the message)

$$\Leftrightarrow \begin{cases} C = E(K, m) = K \oplus m \\ m = D(K, c) = K \oplus c \end{cases}$$

$$\begin{array}{l} \xrightarrow{\text{Exp}} D(K, E(K, m)) = D(K, K \oplus m) = \underline{K \oplus K \oplus m} \\ \qquad \qquad \qquad = 0 \oplus m = \underline{\underline{m}} \end{array}$$

\* it is security ?!

\* You are given a message ( $m$ ) and its OTP enc. ( $c$ )

(Can you compute the OTP key from  $m + c$  ?!)

... Yes, the key is  $K = m \oplus c$ .

\* OTP Fast enc/dec  
very

but key long as plaintext.

- Is the OTP a good cipher?!

## ★★ Security Cipher.

Ciphertext  $\rightarrow$  إذا كان عدداً  $\leftarrow$  غير Security  $\rightarrow$  Shannon  $\rightarrow$   
 plaintext  $\rightarrow$  عدداً غير مترافقاً  $\rightarrow$  مخصوصاً

\* A cipher  $(E, D)$  over  $(K, M, C)$  has perfect secrecy if:

$$\text{len}(m_0) = \text{len}(m_1)$$

$$\forall m_0, m_1 \in M \quad \& \quad c \in C$$

~~Pr[E(K, m) = c]~~

$$\Pr [E(K, m_0) = c] = \Pr [E(K, m_1) = c]$$

where  $K$  is uniform. in  $K$ .  $(K \leftarrow K)$

مُوفّقة بها؟

و $m_0$  no enc. in  $M$   $\rightarrow$  prob  $\leq$  same as attacker  $\rightarrow$   $L$

ما هي أي خلوات!  $\forall m_1$  the negl prob  $\rightarrow$   $L$

★★ In OTP (Most powerful adversary learns nothing about

PT from CT)

$\Rightarrow$  No CT only attack !! (but other attacks are possible).

\* OTP has perfect secrecy !!

$$\forall m, c : \Pr [E(K, m) = c] = \frac{\#\text{ of keys } K \in K}{\#\text{ of keys } K} \text{ s.t. } E(K, m) = c$$

$$\therefore \frac{\#\text{ of keys } K \in K}{\#\text{ of keys } K} = \Pr [E(K, m) = c]$$

- So:-  $\forall m, c : \#\{K \in K : E(K, m) = c\}$  = constant ?!
- $\Rightarrow \therefore$  Cipher has perfect secrecy.

Q let  $m \in M + c \in C$ , How many OTP Keys map  $m$  to  $c$  ?!

(1)

• Proof (perfect secrecy): For OTP if  $E(K, m) = c$

$$\Rightarrow K \oplus m = c \Rightarrow K = m \oplus c$$

$$\Rightarrow \#\{K \in K : E(K, m) = c\} = 1 \quad \forall m, c$$

$\therefore$  OTP has perfect secrecy.

\*\* OTP : no CT only attack !! (but other attack possible).  
intro. by J. F. C. S.

\*\* Problem in OTP  $\Rightarrow$  The secret key is long \*\*

ciphers like RSA

have perfect secrecy

but shorter keys ?!

\*\* if the cipher has perfect secrecy, the num. of keys in the cipher must be at least the num. of  $m$ . that cipher can handle.

$$*** \text{ Perfect Secrecy} \Rightarrow |K| \geq |M|$$

~~if~~  $|K| \geq |M|$   $\rightarrow$  no  $\epsilon$  C given

\*\* OTP hard to use, because long key.  
in practice

① OTP has perfect secrecy (~~No CT only attack~~) but hard to use.

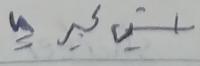

$$\textcircled{2} \text{ perfect-secrecy} \Rightarrow |K| \geq |M|$$

$\Rightarrow$  Stream cipher. (making OTP practical).

- PRG<sub>i</sub> (PseudoRandom Generator). is a func.  $G_i : \{0,1\}^s \xrightarrow{\text{map}} \{0,1\}^n$

$$G_i : \{0,1\}^s \xrightarrow{\text{map}} \{0,1\}^n \quad n \gg s$$

map  $\uparrow$  seed, Generate  $\epsilon_i$

$G_i$  must "efficient" computable:

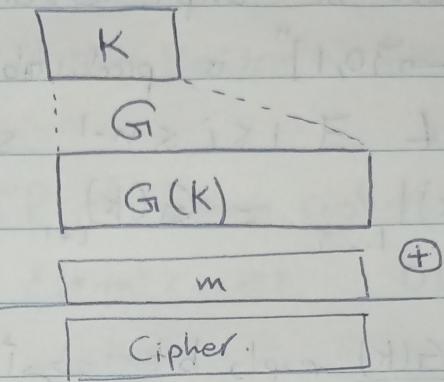

\* Seed : Random

REDMI NOTE 9  
AI QUAD CAMERA

Generator ( $G$ )  $\rightarrow$  key  $\leftarrow$  seed  $\rightarrow$  much longer seq.

much longer seq.  $\rightarrow$  seed  $\rightarrow$  expand  $\rightarrow$   $K$

$$\therefore C = E(k, m) := m \oplus G(K)$$

$$D(K, C) = C \oplus G(K)$$

⇒ Why is secure?!

Can a stream cipher have perfect secrecy?

No, since the key is shorter than the message.

?!

PRG must be Unpredictable

Suppose PRG is predictable!

$$\exists i : G(k) | \xrightarrow{\text{algo.}} G(k) | \dots | \underset{i}{\dots} | \underset{i+1}{\dots} | \dots | \underset{n}{\dots}$$

ایضاً bits امتحان هر bit  $\rightarrow$  bit دویسته

$\therefore$  not secure

Unpredictable  $\rightarrow$  PRG

لوگو  $\rightarrow$  PT  $\rightarrow$  جن باین  $\rightarrow$  sttacker

predictable  $\rightarrow$  G(K)  $\rightarrow$  prefix  $\rightarrow$  جن باین

$m \rightarrow$  جن باین  $\rightarrow$  G(K)  $\rightarrow$  جن باین

جهاز عرضي.  $\checkmark$  no secure  $\rightsquigarrow$  (predictable) PRG  $\rightsquigarrow$  إذا كان  $\oplus$

$\checkmark$  نوع آخر الباعي  $\leftarrow$  bit أول

$\therefore \Rightarrow$  PRG must be Unpredictable.

- we say that  $G:K \rightarrow \{0,1\}^n$  is predictable if.

$\exists$  "eff." alg.  $\&$   $\exists 1 \leq i \leq n-1$  s.t.

$$\Pr_{\substack{K \xrightarrow{R} K}} [\text{alg.}(G_i(K))_{1 \dots i}] = G_i(K)_{i+1} \geq \frac{1}{2} + \epsilon$$

\* يعني إذا كانت أى فرصة لـ  $G_i(K)$  تساوي bit

بعده بـ  $\epsilon$  (أو تساوى).

$\geq \frac{1}{2}^{30}$  (not negligible).

$\star \therefore$  PRG is unpredictable if it's

no "eff" can predict bit ( $i+1$ ) for non-neg.  $\epsilon$ .

Q

Suppose  $G:K \rightarrow \{0,1\}^n$  is st. for all  $K$   $\text{XOR}(G_i(K)) = 1$

Is  $G_i$  predictable?!

- Yes, given the first  $n-1$  bits I can predict the  $n$ 'th bit.

Weak PRGs  $\Rightarrow a, b, p$  parameters.

$r[0] = \text{seed}$

$r[i] \leftarrow a \cdot r[i-1] * b \bmod p$

output few bits of  $r[;]$

$i++$

Easy to predict

REDMI NOTE 9

AI QUAD CAMERA

⇒ glibc random() : (Easy to predict) !! X

$$r[i] \leftarrow (r[i-3] + r[i-3]) \% 2^{32}$$

Output  $r[i] > 1$

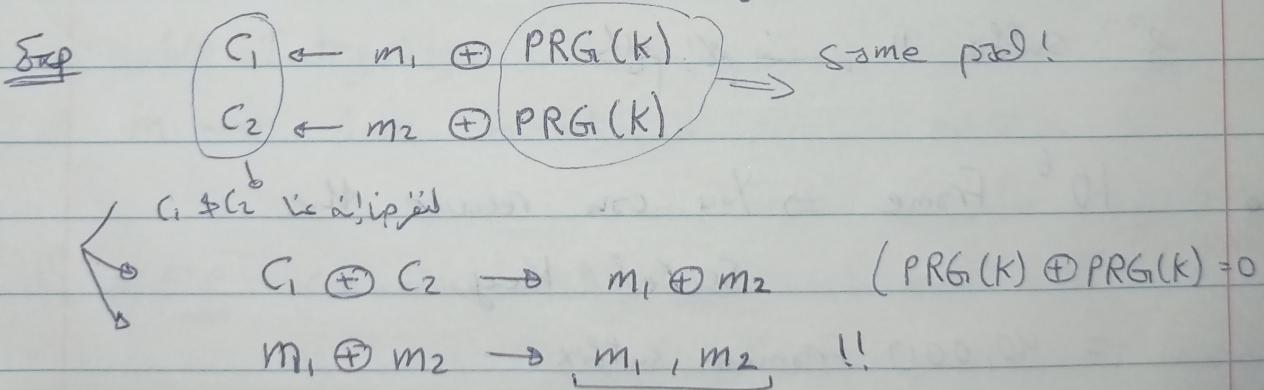

⇒ Never use Random() for crypto !!

## \* Attacks on OTP & Stream ciphers.

- OTP  $E(K, m) = m \oplus K$   $D(K, c) = c \oplus K$
- ~~OTP~~ practical use PRG1  $G: K \rightarrow \{0,1\}^n$
- stream cipher.  $E(K, m) = m \oplus G(K)$ ,  $D(K, m) = c + G(K)$ .
- For Security PRG1 must be unpredictable.

## \* II Attack #1 :-

- never use stream cipher key more than once !!

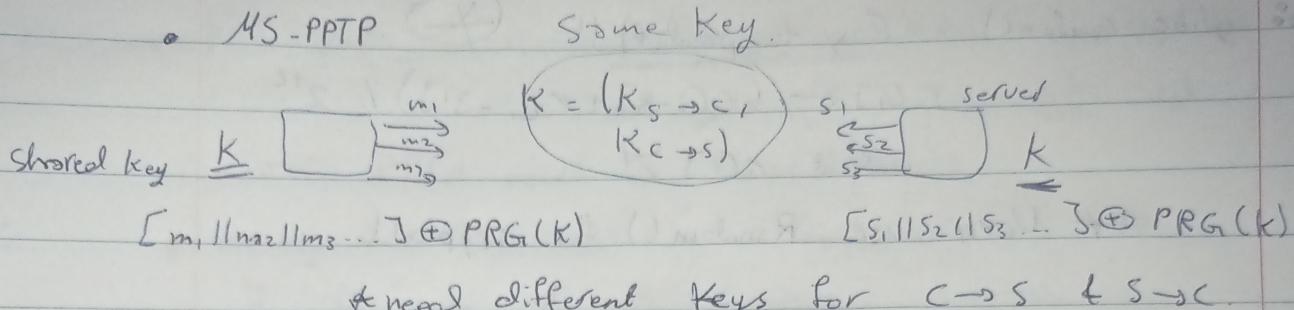

different mess. I encrypt the same pad so it is not random !! \*

. not secure vs safe

- MS-PPTP

- 802.11b WEP

@ length of IV is 24 bits.

∴ Repeated IV after  $2^{24} \approx 16M$  frames.

PI (1) is attacker II: 2 diff frames encrypt to same IV.

diff. key II with IV. plain text encrypt also frame 1 & 2.

key frame 1  $(P II(k))$  → these keys very much.

key frame 2  $(2 II(k))$  → Related to others.

$2^{24}$  suffix II

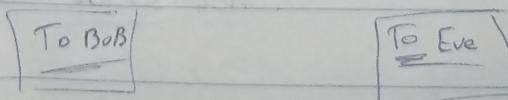

$10^6$  frame  $\Rightarrow$  You can recover the secret key.

= 40,000 frames suffix.

(indep.)  $\hookrightarrow$  this key with frame 1 is diff.

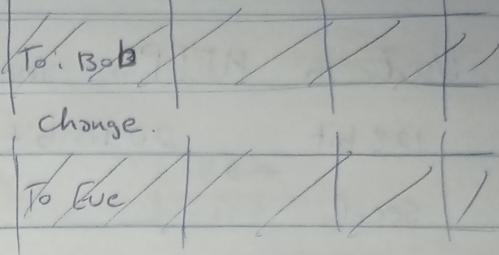

$\hookrightarrow$  each frame has a pseudorandom key.

- disk Enc.

To Bob  $\xrightarrow{\text{enc}}$

To Eve  $\xrightarrow{\text{enc}}$

!! Attackers can modify it to the attacker !!

! \* (2-time pad attack) \* !      not secure.

because used the same pad.

## \* 2-Time pad.

- never use stream cipher more than once.

- Network traffic ( session key  $\neq$  )

- Disk encryption ( stream cipher )  $\neq$  ( pad )

## \* Attack 2.

No Integrity.

$m \rightarrow (\text{enc } m \oplus k)$

cipher

$m \oplus k$

$P \leftarrow$  attacker  
modify  $m \oplus k$

$m \oplus P \leftarrow \text{dec} ( \oplus k ) \leftarrow m \oplus k \oplus P$ .

$\therefore$  modification the ciphertext are undetected &

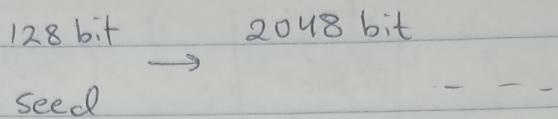

have predictable impact on plaintext.

- ↳ 1. Exists "efficient" deterministic algo. to evaluate  $E(\mathcal{K}, \mathcal{X})$ .

2. The function  $E(\mathcal{K}, \cdot)$  is one to one.

3. Exists "eff." inversion algo.  $D(\mathcal{K}, y)$ .

00 Exps. on

PRPs

→ AES :  $\mathcal{K} \times \mathcal{X} \rightarrow \mathcal{X}$  where  $\mathcal{K} = \mathcal{X} = \{0, 1\}^{128}$

→ 3DES :  $\mathcal{K} \times \mathcal{X} \rightarrow \mathcal{X}$  //  $\mathcal{X} = \{0, 1\}^{64}$ ,  $\mathcal{K} = \{0, 1\}^{168}$

④ Functionally, any PRP is also a PRF

∴ A PRP is a PRF where  $\mathcal{X} = \mathcal{Y}$  & is efficiently invertible.

REDMI NOTE 9 ((PRP is a special case of PRF)) ← \*

 $\Rightarrow DES(K, m_1 \oplus m_2 \oplus m_3)$

Recover for the key  $\leftarrow 832$  : \* \*  
 entire secret key.

\* \* Choosing the S-boxes and P-box at random.  
 $\Rightarrow$  insecure (Linear !!).

and Key recovery after  $\approx 2^{24}$  outputs).

\* \* No output bit should be close to  
 linear function. of the input bits.

\* \*

## \* Exhaustive Search Attacks

- given a few input output pairs  $(m_i, c_i = E(K, m_i)) \quad i=1, \dots, 3$

Find key.

$$!! \quad (m_1, m_2, m_3) \xrightarrow{K} (c_1, c_2, c_3)$$

$\hookrightarrow$  Unique  $\Leftrightarrow$  Key  $\exists$  unique  $\square$

$\hookrightarrow$  Suppose DES is an Ideal cipher

$2^{56}$  random invertible func.

DES implements a random  $\exists \leftarrow$  Key JSU  $\leftarrow$  invertible function.

\*\*  $2^{56}$  Keys in DES

$\therefore$  DES is a collection

$$\left( \pi_1, \dots, \pi_{2^{56}} : \{0,1\}^{64} \rightarrow \{0,1\}^{64} \right)$$

just for Ideal !!

$\Rightarrow * C = DES(K, m)$  (need one key)

$\therefore$  Key is Unique.

• Proof:  $\Pr [\exists K' \neq K; C = DES(K, m) = DES(K', m)]$

$$\leq \sum_{K' \in \{0,1\}^{56}} \Pr [DES(K, m) = DES(K', m)]$$

For  
permutation

①  $\therefore$  The prob that the key is not

$$\text{Unique} = \frac{1}{256}$$

$$= \frac{1}{2^8}$$

② \* The prob that the key Unique.

$$1 - \frac{1}{256} = 99.5\%$$

$$= \frac{1}{256}$$
