SIGNALS AND SYSTEMS

Matlab_Ass-1-

Prepared By:

*Anas Nimer 1180180

Instructor: Dr. Ashraf Al-Rimawi

Section: 1

Date: 15/6/2020

Abstract:

The aim of this assignment:

- 1- To learn how use matlab to solve any function

Table of Contents

Abstract	2
Procedure	8
A. Question 1	4
B. Question 2	5
C. Question 3	8
Conclusion	12
References	13

Procedure:

Q1)

Write a program that computes and plots the convolution of the functions $x(t) = (10e^{-0.5t}) \Pi(\frac{t-7}{4})$, and $y(t) = (10te^{-0.5t}) \Pi(\frac{t-12}{8})$

❖ **Conclusion:** The result is correct so that the solution for the Matlab and Personal solution are similar.

Q2)

- Generate and plot the following signals using MATLAB:
1. $X_1(t) = u(t - 2) - u(t - 9)$
 2. A finite pulse ($P_i(t)$) with value = 8 and extension between 6 and 14
 3. $X_2(t) = u(t - 4) + r(t - 4) - 2r(t - 7) + r(t - 13)$ in the time interval [0 16]

1-

$$X(t) = u(t-2) - u(t-9)$$

MATLAB solution

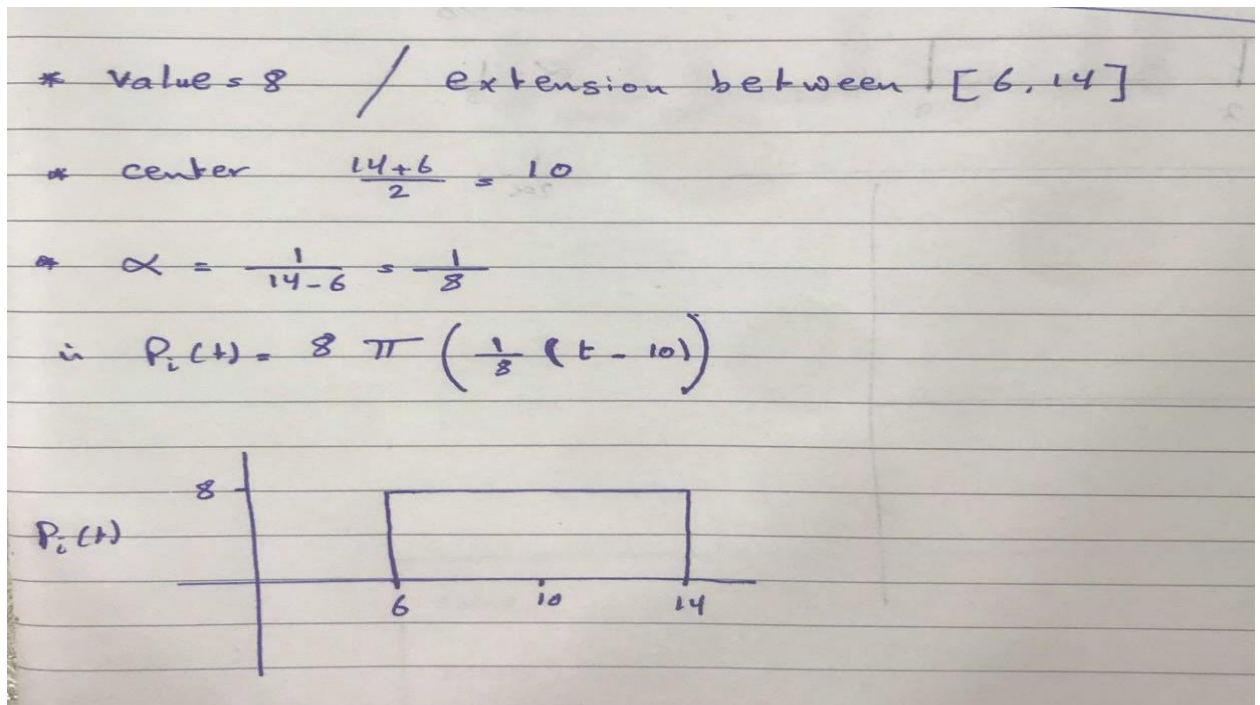

Personal solution

❖ **Conclusion:** The result is correct so that the solution for the Matlab and Personal solution are similar.

2-

MATLAB solution

Personal solution

❖ **Conclusion:** The result is correct so that the solution for the Matlab and Personal solution are similar.

3-

$$x_2(t) = u(t-4) + r(t-4) - 2r(t-7) + r(t-13)$$

MATLAB solution

Personal solution

❖ **Conclusion:** The result is correct so that the solution for the Matlab and Personal solution are similar.

Q3)

1. Generate and plot the signals $y_1(t) = \sin(300\pi t)$, $y_2(t) = \cos(800\pi t)$, then determine and plot the signals $m(t) = y_1 + y_2$ and $n(t) = y_1 - y_2$.
2. Determine, using the MATLAB plots, if the generated signals are periodic. In case a signal is periodic, determine its fundamental frequency.

1-

$$Y_1(t) = \sin(300\pi t)$$

MATLAB solution

$y_1(t) = \sin(300\pi t)$

$\omega_0 = 2\pi f_0$

$300\pi = 2\pi f_0$

$f_0 = 150 \text{ Hz}$

$y_1(t)$ is periodic.

Personal solution

- ❖ **Notes:** As shown by MATLAB solution that $\sin(300\pi t)$ is a periodic function because of function $(\sin(300\pi t))$ repeats itself periodically. In addition to, the personal solution shown the function is periodic.
- ❖ **Conclusion:** The result is correct so that the solution for the MATLAB and Personal solution are similar.

2-

$$Y_2(t) = \cos(800\pi t)$$

MATLAB solution

* $y_2(t) = \cos(800\pi t)$

$\omega_1 = 2\pi f_1$

$800\pi = 2\pi f_1$

$f_1 = 400 \text{ Hz}$

$y_2(t)$ is periodic

Personal solution

- ❖ **Notes:** As shown by Matlab solution that $\cos(800\pi t)$ is a periodic function because of function $(\cos(800\pi t))$ repeats itself periodically. In addition to, the personal solution shown the function is periodic.
- ❖ **Conclusion:** The result is correct so that the solution for the Matlab and Personal solution are similar.

3-

$$m(t) = \sin(300\pi t) + \cos(800\pi t)$$

MATLAB solution

$m(t) = y_1 + y_2 = \sin(800\pi t) + \cos(800\pi t)$

$f_0 = 150 \text{ Hz}, f_1 = 400 \text{ Hz}$

$f_2 = \text{GCD}(150, 400) = 50 \text{ Hz}$

$\therefore f_2 = 50 \text{ Hz}$ $m(t)$ is periodic

Personal solution

- ❖ **Notes:** As shown by MATLAB solution that $m(t) = \sin(300\pi t) + \cos(800\pi t)$ is a periodic function because the function $m(t)$ repeats itself periodically. In addition to, the personal solution shows the function is periodic.
- ❖ **Conclusion:** The result is correct so that the solution for the MATLAB and Personal solution are similar.

4-

MATLAB solution

$$* n(t) = y_1 - y_2 = \sin(300\pi t) - \cos(800\pi t)$$
$$f_0 = 150 \text{ Hz}, \quad f_1 = 400 \text{ Hz}$$
$$f_3 = \text{GCD}(150, 400) = 50 \text{ Hz}$$

∴ $f_3 = 50 \text{ Hz}$ $n(t)$ is periodic

Personal solution

- ❖ **Notes:** As shown by Matlab solution that $n(t) = \sin(300\pi t) + \cos(800\pi t)$ is a periodic function because of function $n(t)$ repeats itself periodically. In addition to, the personal solution shown the function is periodic.
- ❖ **Conclusion:** The result is correct so that the solution for the Matlab and Personal solution are similar.

Conclusion:

The matlab is a very easy program and can use it to solve any function , whether difficult or easy.
