

Part I: z-transform

- z-transform
- Properties of the ROC
- Inverse z-transform
- Properties of z-transform

Limitation of Fourier transform

- Fourier transform

$$X(e^{j\omega}) = \sum_{n=-\infty}^{\infty} x[n] e^{-j\omega n}$$

$$x[n] = \frac{1}{2\pi} \int_{-\pi}^{\pi} X(e^{j\omega}) e^{j\omega n} d\omega$$

- Condition for the convergence of the infinite sum

$$|X(e^{j\omega})| = \left| \sum_{n=-\infty}^{\infty} x[n] e^{-j\omega n} \right| \leq \sum_{n=-\infty}^{\infty} |x[n]| |e^{-j\omega n}| \leq \sum_{n=-\infty}^{\infty} |x[n]| < \infty$$

- If $x[n]$ is absolutely summable, its Fourier transform exists (sufficient condition).

- Example

$$x[n] = a^n u[n] \quad |a| < 1: \quad X(e^{j\omega}) = \frac{1}{1 - ae^{-j\omega}}$$

$$a = 1: \quad X(e^{j\omega}) = \frac{1}{1 - e^{-j\omega}} + \sum_{k=-\infty}^{\infty} \pi \delta(\omega + 2\pi k)$$

$$|a| > 1: \quad -$$

z-transform

■ Fourier transform

$$X(e^{j\omega}) = \sum_{n=-\infty}^{\infty} x[n] e^{-j\omega n}$$

■ z-transform

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n} \quad x[n] \xleftrightarrow{z} X(z)$$

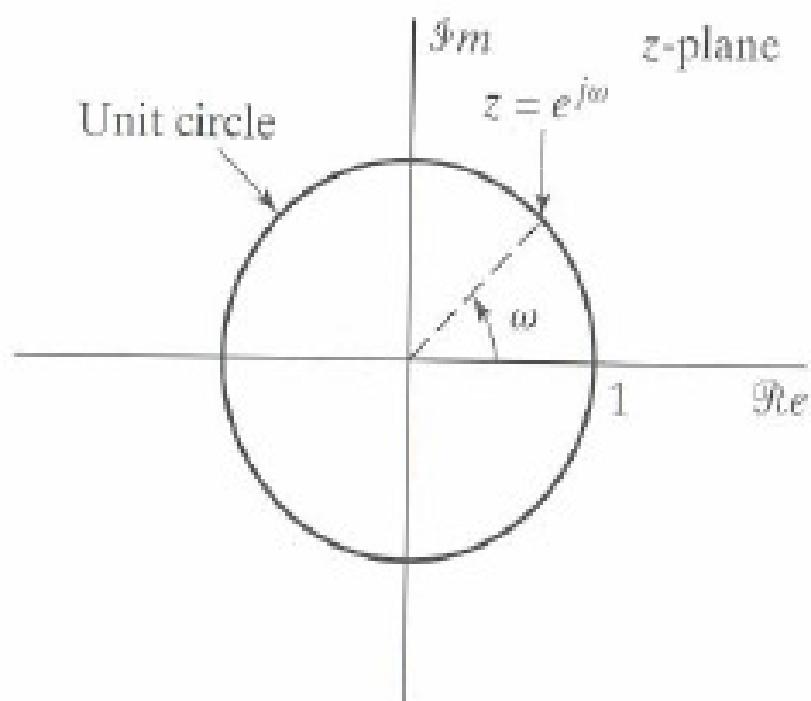

■ The complex variable z in polar form $z = re^{j\omega}$

$$X(z) = X(re^{j\omega}) = \sum_{-\infty}^{\infty} x[n](re^{j\omega})^{-n} = \sum_{-\infty}^{\infty} (x[n]r^{-n})e^{-j\omega n}$$

$$|z| = r = 1, \quad X(z) = X(e^{j\omega})$$

z-plane

- z-transform is a function of a complex variable → using the complex z-plane

Z-transform on unit circle
↔ Fourier transform

Linear frequency axis in
Fourier transform
→ Unit circle in z-transform
(periodicity in freq. of
Fourier transform)

Figure 3.1 The unit circle in the complex z-plane.

Region of convergence – ROC

- Fourier transform does not converge for all sequences

$$X(e^{j\omega}) = \sum_{n=-\infty}^{\infty} x[n] e^{-jn\omega}$$

- z-transform does not converge for all sequences or for all values of z.

$$X(z) = X(re^{j\omega}) = \sum_{n=-\infty}^{\infty} x[n] z^{-n} = \sum_{n=-\infty}^{\infty} (x[n] r^{-n}) e^{-jn\omega}$$

- ROC – for any given seq., the set of values of z for which the z-transform converges

$$\sum_{n=-\infty}^{\infty} |x[n] r^{-n}| < \infty$$

$$\sum_{n=-\infty}^{\infty} |x[n]| |z|^{-n} < \infty \quad \text{ROC is ring!}$$

ROC

- Outer boundary is a circle (may extend to infinity)
- Inner boundary is a circle (may extend to include the origin)
- If ROC includes unit circle, Fourier transform converges

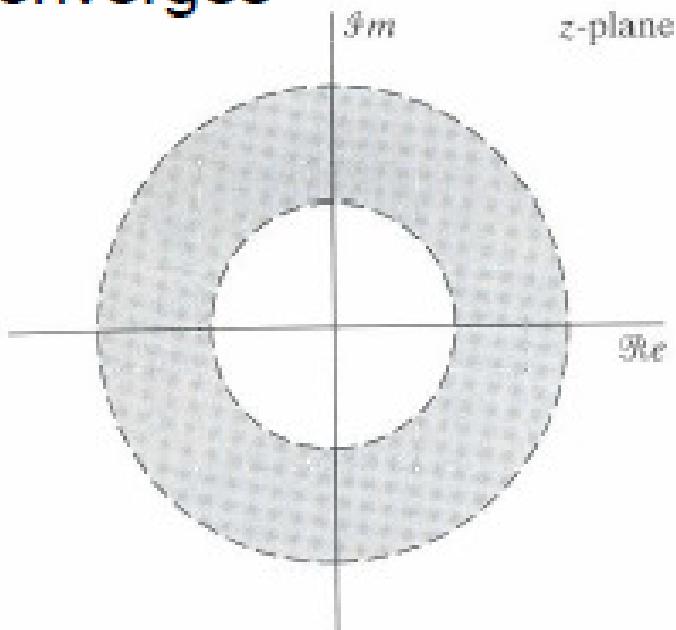

Figure 3.2 The region of convergence (ROC) as a ring in the z-plane. For specific cases, the inner boundary can extend inward to the origin, and the ROC becomes a disc. For other cases, the outer boundary can extend outward to infinity.

Zeros and poles

- The most important and useful z-transforms – rational function:

$$X(z) = \frac{P(z)}{Q(z)}$$

$P(z)$ and $Q(z)$ are polynomials in z

- Zeros: values of z for which $X(z)=0$.
- Poles : values of z for which $X(z)$ is infinite.
- Close relation between poles and ROC

Right-sided exponential sequence

$$x[n] = a^n u[n]$$

$$X(z) = \sum_{n=-\infty}^{\infty} a^n u[n] z^{-n}$$

$$= \sum_{n=0}^{\infty} (az^{-1})^n$$

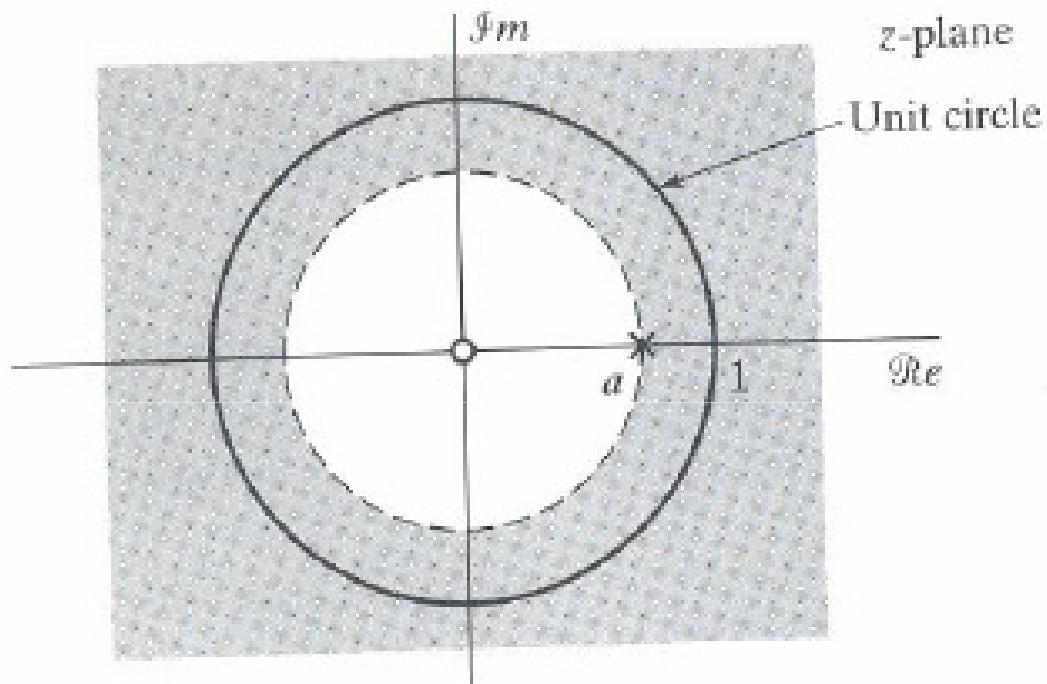

■ ROC

$$\sum_{n=0}^{\infty} |az^{-1}|^n < \infty$$

■ z-transform

$$X(z) = \sum_{n=0}^{\infty} (az^{-1})^n = \frac{1}{1 - az^{-1}} = \frac{z}{z - a}, \quad |z| > |a|$$

$$u[n] \xleftrightarrow{z} \frac{1}{1 - z^{-1}}, \quad |z| > 1$$

Left-sided exponential sequence

$$x[n] = -a^n u[-n-1]$$

$$\begin{aligned} X(z) &= - \sum_{n=-\infty}^{\infty} a^n u[-n-1] z^{-n} \\ &= - \sum_{n=-\infty}^{-1} a^n z^{-n} = 1 - \sum_{n=0}^{\infty} (a^{-1}z)^n \end{aligned}$$

■ ROC

$$\sum_{n=0}^{\infty} |a^{-1}z|^n < \infty$$

■ z-transform

$$X(z) = \frac{1}{1 - az^{-1}} = \frac{z}{z - a}, \quad |z| < |a|$$

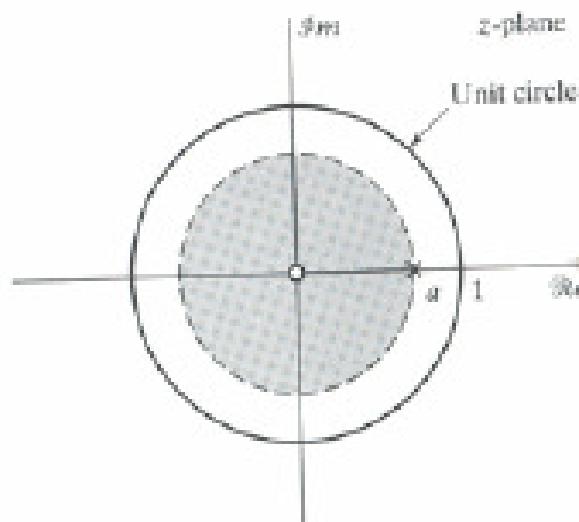

Figure 3.4 Pole-zero plot and region of convergence for Example 3.2

Sum of two exponential sequence

$$x[n] = \left(\frac{1}{2}\right)^n u[n] + \left(-\frac{1}{3}\right)^n u[n]$$

$$X(z) = \sum_{n=0}^{\infty} \left(\frac{1}{2}z^{-1}\right)^n + \sum_{n=0}^{\infty} \left(-\frac{1}{3}z^{-1}\right)^n$$

$$= \frac{1}{1 - \frac{1}{2}z^{-1}} + \frac{1}{1 + \frac{1}{3}z^{-1}} = \frac{2z(z - \frac{1}{12})}{(z - \frac{1}{2})(z + \frac{1}{3})}$$

■ ROC

$$\left| \frac{1}{2}z^{-1} \right| < 1 \text{ and } \left| -\frac{1}{3}z^{-1} \right| < 1$$

$$\left| z \right| > \frac{1}{2} \text{ and } \left| z \right| > \frac{1}{3}$$

$$\left| z \right| > \frac{1}{2}$$

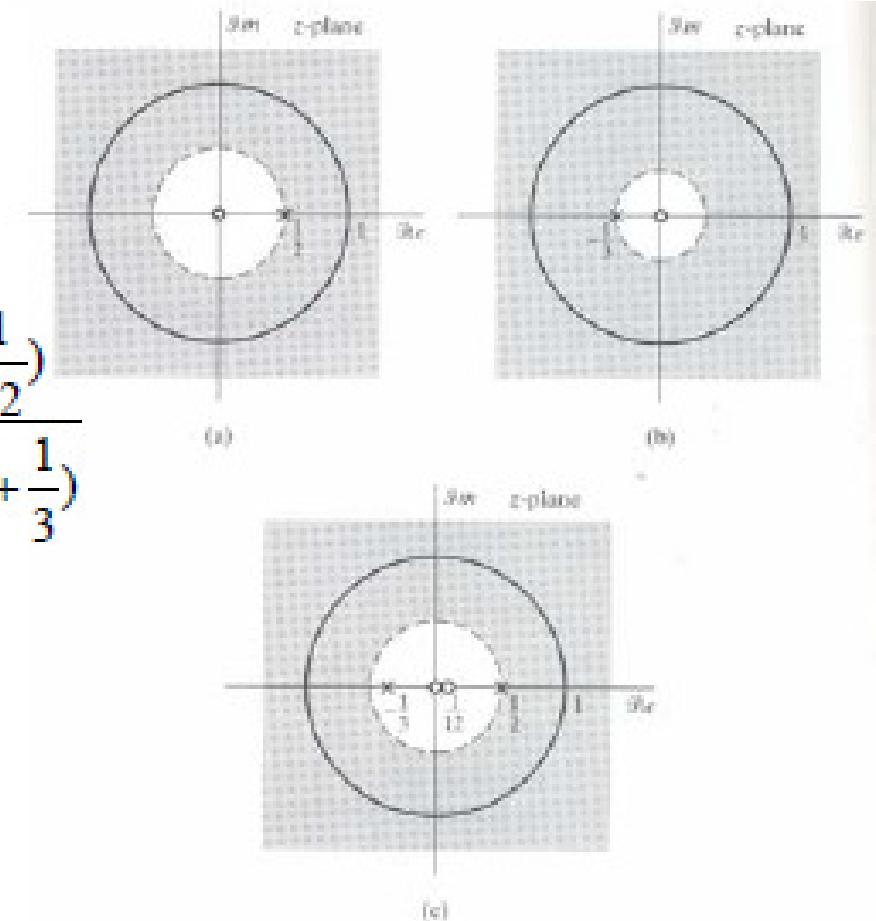

Figure 3.6 Pole-zero plot and region of convergence for the individual terms and the sum of terms in Examples 3.3 and 3.4. (a) $1/(1 - \frac{1}{2}z^{-1})$, $|z| > \frac{1}{2}$. (b) $1/(1 + \frac{1}{3}z^{-1})$, $|z| > \frac{1}{3}$. (c) $1/(1 - \frac{1}{2}z^{-1}) + 1/(1 + \frac{1}{3}z^{-1})$, $|z| > \frac{1}{2}$.

Sum of two exponential sequence

Another way to calculate:

$$x[n] = \left(\frac{1}{2}\right)^n u[n] + \left(-\frac{1}{3}\right)^n u[n]$$

$$\left(\frac{1}{2}\right)^n u[n] \leftrightarrow \frac{1}{1 - \frac{1}{2}z^{-1}}, \quad |z| > \frac{1}{2}$$

$$\left(-\frac{1}{3}\right)^n u[n] \leftrightarrow \frac{1}{1 + \frac{1}{3}z^{-1}}, \quad |z| > \frac{1}{3}$$

$$\left(\frac{1}{2}\right)^n u[n] + \left(-\frac{1}{3}\right)^n u[n] \leftrightarrow \frac{1}{1 - \frac{1}{2}z^{-1}} + \frac{1}{1 + \frac{1}{3}z^{-1}} \quad |z| > \frac{1}{2}$$

Two-sided exponential sequence

$$x[n] = \left(-\frac{1}{3}\right)^n u[n] - \left(\frac{1}{2}\right)^n u[-n-1]$$

$$\left(-\frac{1}{3}\right)^n u[n] \leftrightarrow \frac{z}{1 + \frac{1}{3}z^{-1}}, \quad |z| > \frac{1}{3}$$

$$-\left(\frac{1}{2}\right)^n u[-n-1] \leftrightarrow \frac{z}{1 - \frac{1}{2}z^{-1}}, \quad |z| < \frac{1}{2}$$

$$X(z) = \frac{1}{1 + \frac{1}{3}z^{-1}} + \frac{1}{1 - \frac{1}{2}z^{-1}}, \quad |z| > \frac{1}{3}, \quad |z| < \frac{1}{2}$$

$$= \frac{2z(z - \frac{1}{12})}{(z - \frac{1}{2})(z + \frac{1}{3})}$$

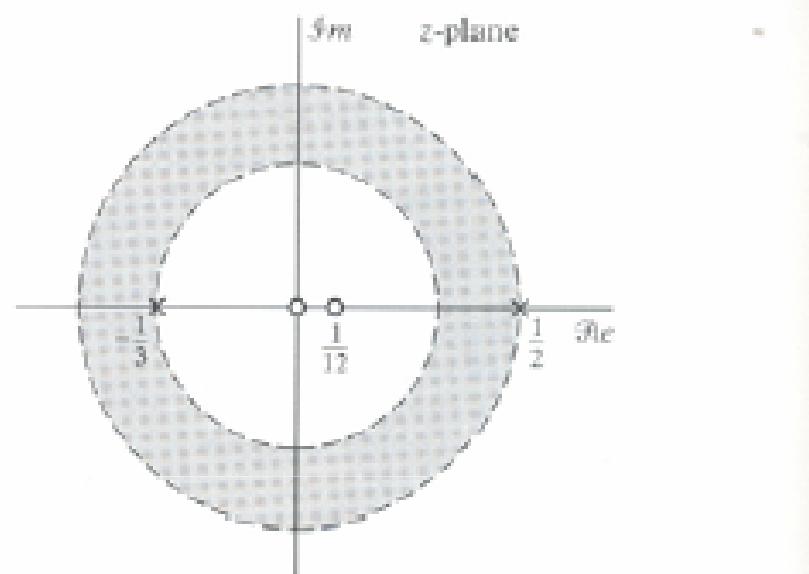

Figure 3.6 Pole-zero plot and region of convergence for Example 3.5.

Finite-length sequence

$$x[n] = \begin{cases} a^n, & 0 \leq n \leq N-1 \\ 0, & \text{otherwise.} \end{cases}$$

$$\begin{aligned} X(z) &= \sum_{n=0}^{N-1} a^n z^{-n} = \sum_{n=0}^{N-1} (az^{-1})^n \\ &= \frac{1 - (az^{-1})^N}{1 - az^{-1}} = \frac{1}{z^{N-1}} \frac{z^N - a^N}{z - a} \end{aligned}$$

$$\text{ROC } \sum_{n=0}^{N-1} |az^{-1}|^n < \infty$$

$|a| < \infty$ and $z \neq 0$

$$z_k = ae^{j(2\pi k/N)}, \quad k = 0, 1, \dots, N-1$$

pole at $z = a$

$$z_k = ae^{j(2\pi k/N)}, \quad k = 1, \dots, N-1$$

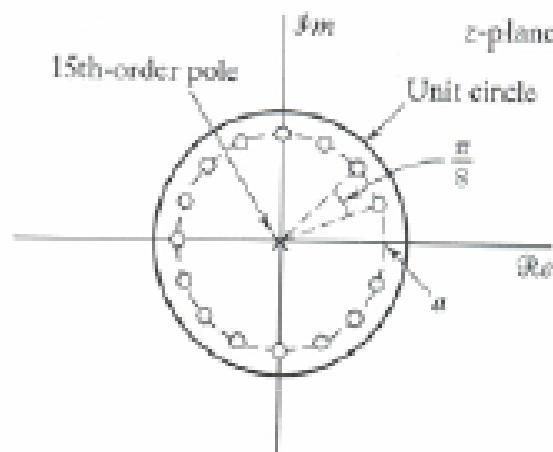

Figure 3.7 Pole-zero plot for Example 3.6 with $N = 16$ and a real such that $0 < a < 1$. The region of convergence in this example consists of all values of z except $z = 0$.

TABLE 3.1 SOME COMMON z -TRANSFORM PAIRS

Sequence	Transform	ROC
1. $\delta[n]$	1	All z
2. $u[n]$	$\frac{1}{1 - z^{-1}}$	$ z > 1$
3. $-u[-n - 1]$	$\frac{1}{1 - z^{-1}}$	$ z < 1$
4. $\delta[n - m]$	z^{-m}	All z except 0 (if $m > 0$) or ∞ (if $m < 0$)
5. $a^n u[n]$	$\frac{1}{1 - az^{-1}}$	$ z > a $
6. $-a^n u[-n - 1]$	$\frac{1}{1 - az^{-1}}$	$ z < a $
7. $na^n u[n]$	$\frac{az^{-1}}{(1 - az^{-1})^2}$	$ z > a $
8. $-na^n u[-n - 1]$	$\frac{az^{-1}}{(1 - az^{-1})^2}$	$ z < a $
9. $[\cos \omega_0 n]u[n]$	$\frac{1 - [\cos \omega_0]z^{-1}}{1 - [2 \cos \omega_0]z^{-1} + z^{-2}}$	$ z > 1$
10. $[\sin \omega_0 n]u[n]$	$\frac{[\sin \omega_0]z^{-1}}{1 - [2 \cos \omega_0]z^{-1} + z^{-2}}$	$ z > 1$
11. $[r^n \cos \omega_0 n]u[n]$	$\frac{1 - [r \cos \omega_0]z^{-1}}{1 - [2r \cos \omega_0]z^{-1} + r^2 z^{-2}}$	$ z > r$
12. $[r^n \sin \omega_0 n]u[n]$	$\frac{[r \sin \omega_0]z^{-1}}{1 - [2r \cos \omega_0]z^{-1} + r^2 z^{-2}}$	$ z > r$
13. $\begin{cases} a^n, & 0 \leq n \leq N - 1, \\ 0, & \text{otherwise} \end{cases}$	$\frac{1 - a^N z^{-N}}{1 - az^{-1}}$	$ z > 0$

Part II: Properties of the ROC

- z-transform
- Properties of the ROC
- Inverse z-transform
- Properties of z-transform

PROPERTY 1: The ROC is a ring or disk in the z -plane centered at the origin; i.e., $0 \leq r_R < |z| < r_L \leq \infty$.

PROPERTY 2: The Fourier transform of $x[n]$ converges absolutely if and only if the ROC of the z -transform of $x[n]$ includes the unit circle.

PROPERTY 3: The ROC cannot contain any poles.

PROPERTY 4: If $x[n]$ is a *finite-duration sequence*, i.e., a sequence that is zero except in a finite interval $-\infty < N_1 \leq n \leq N_2 < \infty$, then the ROC is the entire z -plane, except possibly $z = 0$ or $z = \infty$.

PROPERTY 5: If $x[n]$ is a *right-sided sequence*, i.e., a sequence that is zero for $n < N_1 < \infty$, the ROC extends outward from the *outermost* (i.e., largest magnitude) finite pole in $X(z)$ to (and possibly including) $z = \infty$.

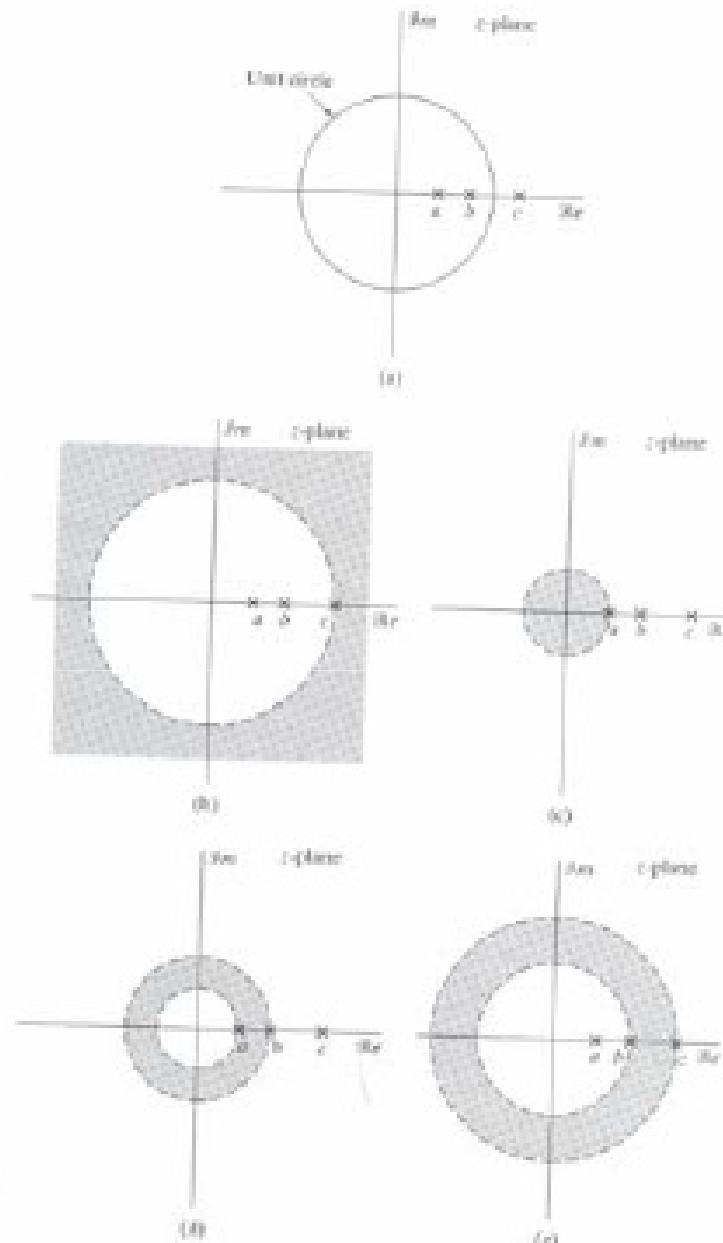

PROPERTY 6: If $x[n]$ is a *left-sided sequence*, i.e., a sequence that is zero for $n > N_2 > -\infty$, the ROC extends inward from the *innermost* (smallest magnitude) nonzero pole in $X(z)$ to (and possibly including) $z = 0$.

PROPERTY 7: A *two-sided sequence* is an infinite-duration sequence that is neither right sided nor left sided. If $x[n]$ is a two-sided sequence, the ROC will consist of a ring in the z -plane, bounded on the interior and exterior by a pole and, consistent with property 3, not containing any poles.

PROPERTY 8: The ROC must be a connected region.

Properties of the ROC

- The algebraic expression or pole-zero pattern does not completely specify the z-transform of a sequence \rightarrow the ROC must be specified!
- Stability, causality and the ROC

Part III: Inverse z-transform

- z-transform
- Properties of the ROC
- Inverse z-transform
- Properties of z-transform

Inverse z-transform

- Needed for system analysis: 1) z-transform,
2) manipulation, 3) inverse z-transform.
- Approaches:
 - Inspection method
 - Partial fraction expansion
 - Power series expansion

Inspection method

- By inspection, e.g.

$$X(z) = \left(\frac{1}{1 - \frac{1}{2}z^{-1}} \right), \quad |z| > \frac{1}{2}$$

- Make use of

$$a^n u(n) \xleftrightarrow{z} \left(\frac{1}{1 - az^{-1}} \right), \quad |z| > |a|$$

$$\therefore x[n] = \left(\frac{1}{2} \right)^n u[n]$$

$$\text{if } |z| < \frac{1}{2} ? \quad \text{of course, } x[n] = -\left(\frac{1}{2} \right)^n u[-n-1]$$

Partial fraction expansion

- For rational function, get the format of a sum of simpler terms, and then use the inspection method.

Second-order z-transform

$$X(z) = \frac{1}{1 - \frac{3}{4}z^{-1} + \frac{1}{8}z^{-2}}, \quad |z| > \frac{1}{2}$$

$$X(z) = \frac{1}{(1 - \frac{1}{4}z^{-1})(1 - \frac{1}{2}z^{-1})}$$

$$X(z) = \frac{A_1}{(1 - \frac{1}{4}z^{-1})} + \frac{A_2}{(1 - \frac{1}{2}z^{-1})}$$

$$A_1 = (1 - \frac{1}{4}z^{-1})X(z)|_{z=1/4} = -1$$

$$A_2 = (1 - \frac{1}{2}z^{-1})X(z)|_{z=1/2} = 2$$

$$X(z) = \frac{-1}{(1 - \frac{1}{4}z^{-1})} + \frac{2}{(1 - \frac{1}{2}z^{-1})}$$

$$x[n] = 2(\frac{1}{2})^n u[n] - (\frac{1}{4})^n u[n]$$

$$X(z) = \frac{\sum_{k=0}^M b_k z^{-k}}{\sum_{k=0}^N a_k z^{-k}}$$
$$X(z) = \frac{b_0}{a_0} \frac{\sum_{k=1}^M (1 - c_k z^{-1})}{\sum_{k=1}^N (1 - d_k z^{-1})}$$

$$X(z) = \sum_{k=1}^N \frac{A_k}{1 - d_k z^{-1}}$$

$$A_k = X(z)(1 - d_k z^{-1})|_{z=d_k}$$

What about M>=N?

$$X(z) = \frac{1+2z^{-1}+z^{-2}}{1-\frac{3}{2}z^{-1}+\frac{1}{2}z^{-2}}, \quad |z| > 1$$

$$X(z) = \frac{(1+z^{-1})^2}{(1-\frac{1}{2}z^{-1})(1-z^{-1})}$$

$$X(z) = B_0 + \frac{A_1}{(1-\frac{1}{2}z^{-1})} + \frac{A_2}{(1-z^{-1})}$$

$$\frac{1}{2}z^{-2} - \frac{3}{2}z^{-1} + 1 \Big) z^{-2} + 2z^{-1} + 1 \\ \frac{z^{-2} - 3z^{-1} + 2}{-5z^{-1} - 1}$$

$B_0 = 2$ Found by long division.

$$A_1 = (1-\frac{1}{2}z^{-1})X(z)|_{z=1/2} = -9$$

$$A_2 = (1-z^{-1})X(z)|_{z=1} = 8$$

$$X(z) = 2 - \frac{9}{(1-\frac{1}{2}z^{-1})} + \frac{8}{(1-z^{-1})}$$

$$x[n] = 2\delta[n] - 9\left(\frac{1}{2}\right)^n u[n] + 8u[n]$$

Power series expansion

■ By long division

$$X(z) = \frac{1}{1 - az^{-1}}, \quad |z| > |a|$$

$$\begin{array}{r} 1 + az^{-1} + a^2 z^{-2} + \dots \\ \hline 1 - az^{-1}) 1 \end{array}$$

$$\underline{1 - az^{-1}}$$

$$az^{-1}$$

$$\underline{az^{-1} - a^2 z^{-2}}$$

$$a^2 z^{-2} \dots$$

$$\frac{1}{1 - az^{-1}} = 1 + az^{-1} + a^2 z^{-2} + \dots$$

$$x[n] = a^n u[n]$$

Finite-length sequence

$$X(z) = z^2 \left(1 - \frac{1}{2}z^{-1}\right) \left(1 + z^{-1}\right) \left(1 - z^{-1}\right)$$

$$X(z) = z^2 - \frac{1}{2}z - 1 + \frac{1}{2}z^{-1}$$

$$x[n] = \delta[n+2] - \frac{1}{2}\delta[n+1] - \delta[n] + \frac{1}{2}\delta[n-1]$$

Part IV: Properties of z-transform

- z-transform
- Properties of the ROC
- Inverse z-transform
- Properties of z-transform

Linearity

$$x_1[n] \xrightarrow{z} X_1(z), \quad \text{ROC} = R_{x_1}$$

$$x_2[n] \xrightarrow{z} X_2(z), \quad \text{ROC} = R_{x_2}$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

■ Linearity

$$ax_1[n] + bx_2[n] \xrightarrow{z} aX_1(z) + bX_2(z), \quad \text{ROC contains } R_{x_1} \cap R_{x_2}$$

at least

$$u[n] \xrightarrow{z} \frac{1}{1-z^{-1}}, \quad |z| > 1$$

$$u[n-1] \xrightarrow{z} \frac{z^{-1}}{1-z^{-1}}, \quad |z| > 1$$

$$u[n] - u[n-1] = \delta[n] \xrightarrow{z} \frac{1-z^{-1}}{1-z^{-1}} = 1, \quad \text{All } z$$

Time shifting

$$x[n - n_0] \xleftrightarrow{z} z^{-n_0} X(z),$$

ROC = R_{x_1} (except for 0 or ∞)

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

■ Example $X(z) = \frac{1}{z - \frac{1}{4}}$, $|z| > \frac{1}{4}$

$$X(z) = \frac{z^{-1}}{1 - \frac{1}{4}z^{-1}} = z^{-1} \left(\frac{1}{1 - \frac{1}{4}z^{-1}} \right)$$

$$\left(\frac{1}{4}\right)^n u[n] \xleftrightarrow{z} \frac{1}{1 - \frac{1}{4}z^{-1}}$$

$$\left(\frac{1}{4}\right)^{n-1} u[\underline{n-1}] \xleftrightarrow{z} z^{-1} \left(\frac{1}{1 - \frac{1}{4}z^{-1}} \right)$$

Multiplication by exponential sequence

$$z_0^n x[n] \xrightarrow{Z} X(z/z_0), \quad \text{ROC} = |z_0| R_x$$

$$e^{j\omega_0 n} x[n] \xrightarrow{F} X(e^{j(\omega-\omega_0)})$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

■ Examples

$$u[n] \xrightarrow{Z} \frac{1}{1-z^{-1}}, \quad |z| > 1$$

$$a^n u[n] \xrightarrow{Z} \frac{1}{1-(z/a)^{-1}} = \frac{1}{1-az^{-1}}, \quad |z| > a$$

$$x[n] = \cos(\omega_0 n) u[n] = \frac{1}{2} (e^{j\omega_0})^n u[n] + \frac{1}{2} (e^{-j\omega_0})^n u[n]$$

$$X(z) = \frac{\frac{1}{2}}{1-e^{j\omega_0}z^{-1}} + \frac{\frac{1}{2}}{1-e^{-j\omega_0}z^{-1}} = \frac{(1-\cos\omega_0 z^{-1})}{1-2\cos\omega_0 z^{-1}+z^{-2}}, \quad |z| > 1$$

Differentiation of X(z)

$$nx[n] \xleftrightarrow{z} -z \frac{dX(z)}{dz}, \quad \text{ROC} = R_x$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

■ Example $X(z) = \log(1 + az^{-1}), \quad |z| > |a|$

$$\frac{dX(z)}{dz} = \frac{-az^{-2}}{1 + az^{-1}}$$

$$nx[n] \xleftrightarrow{z} -z \frac{dX(z)}{dz} = \frac{az^{-1}}{1 + az^{-1}}, \quad |z| > |a|$$

$$nx[n] = a(-a)^{n-1} u[n-1]$$

$$x[n] = \frac{a(-a)^{n-1}}{n} u[n-1]$$

Conjugation of a complex sequence

$$x^*[n] \xleftrightarrow{z} X^*(z^*), \quad \text{ROC} = R_x$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

Time reversal

$$x[-n] \xrightarrow{z} X(1/z), \text{ ROC} = 1/R_x$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

■ Example

$$x[n] = a^{-n} u[-n]$$

$$x[n] = a^n u[n]$$

$$X(z) = \frac{1}{1 - az}, \quad |z| < |a|$$

$$X(z) = \frac{1}{1 - az^{-1}}, \quad |z| > |a|$$

Convolution of sequences

$$x_1[n] * x_2[n] \xrightarrow{z} X_1(z)X_2(z),$$

ROC contains $R_{x_1} \cap R_{x_2}$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

Example

$$x[n] = \left(\frac{1}{2}\right)^n u[n]$$

$$h[n] = u[n]$$

$$y[n]?$$

$$X(z) = \frac{1}{1 - \frac{1}{2}z^{-1}}, \quad |z| > \frac{1}{2}$$

$$H(z) = \frac{1}{1 - z^{-1}}, \quad |z| > 1$$

$$Y(z) = \frac{1}{(1 - \frac{1}{2}z^{-1})(1 - z^{-1})}, \quad |z| > \frac{1}{2}$$

$$y[n] = \frac{1}{1 - \frac{1}{2}} (u[n] - \left(\frac{1}{2}\right)^{n+1} u[n]) \leftarrow = \frac{1}{1 - \frac{1}{2}} \left(\frac{1}{(1 - z^{-1})} - \frac{\frac{1}{2}}{(1 - \frac{1}{2}z^{-1})} \right)$$

Initial-value theorem

$$x[0] = \lim_{z \rightarrow \infty} X(z)$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

$$\lim_{z \rightarrow \infty} X(z) = \lim_{z \rightarrow \infty} \sum_{n=-\infty}^{\infty} x[n] z^{-n}$$

$$= \sum_{n=-\infty}^{\infty} x[n] \lim_{z \rightarrow \infty} z^{-n}$$

$$= x[0]$$

TABLE 3.2 SOME z -TRANSFORM PROPERTIES

Property Number	Section Reference	Sequence	Transform	ROC
1	3.4.1	$x[n]$	$X(z)$	R_x
		$x_1[n]$	$X_1(z)$	R_{x_1}
		$x_2[n]$	$X_2(z)$	R_{x_2}
	3.4.2	$ax_1[n] + bx_2[n]$	$aX_1(z) + bX_2(z)$	Contains $R_{x_1} \cap R_{x_2}$
	3.4.3	$x[n - n_0]$	$z^{-n_0} X(z)$	R_x , except for the possible addition or deletion of the origin or ∞
