

# Diode large signal application

# Example

► Find the Q point

Using thevenin's theorem , the circuit is simplified to

$$R_{th} = 10k + 10k \parallel 20k = 16.7k$$

$$V_{th} = \frac{20k}{20k+10k} * 6 = 4V$$

since  $V_{th} \geq V_k$  , the diode is on

since  $V_{th} < 10 V_k$  , we must use the knee voltage model

# Knee voltage model

$$I_{DQ} = \frac{4 - 0.7}{16.7K} = 0.198 \text{ mA}$$

$$V_{DQ} = V_K = 0.7 \text{ V}$$

# Second method

assume the diode is on , replace it with  $V_K = 0.7 V$

**KVL:**

$$6 = 30 I_1 - 20 I_2$$

$$-0.7 = -20 I_1 + 30 I_2$$

Solve for:

$$I_2 = 0.198 \text{ mA}$$

$$\therefore I_D = I_2 = 0.198 \text{ mA}$$

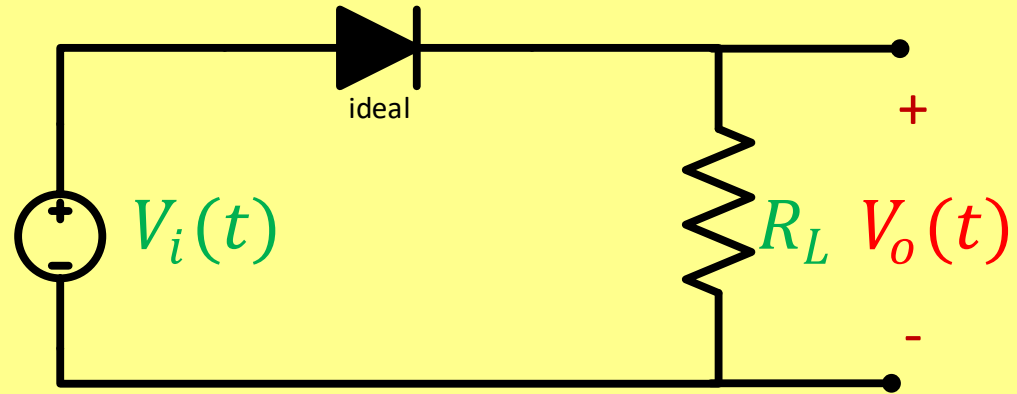

Since  $I_D > 0$  ,  $\therefore$  our assumption is ok

# Diode large - signal application

## 1) Diode clipper circuit

a) assume the diode is on  
replace it with short circuit

$$i_D(t) > 0$$
$$i_D(t) = \frac{V_i(t)}{R_L} > 0$$
$$\therefore V_i(t) > 0$$

$\therefore$  when  $V_i(t) > 0$  , the diode is on and  $V_o(t) = V_i(t)$

$\therefore$  when  $V_i(t) < 0$  , the diode is off and  $V_o(t) = ?$ .

∴ when  $V_i(t) < 0$  , the diode is off

$$V_o(t) = 0.$$

∴ the clipper circuit used to eliminate portion of the input signal .

# Example

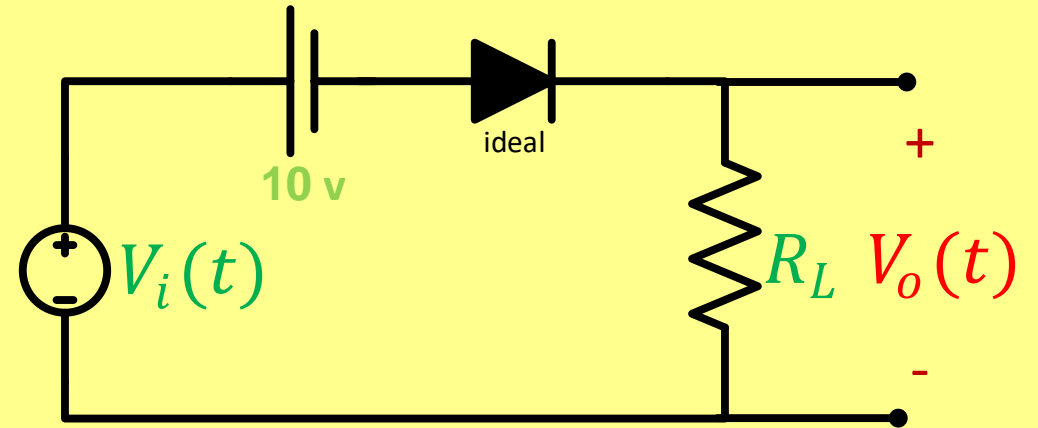

- a) assume that the diode is on
- b) replace it with short circuit

$$V_o(t) = V_i - 10$$

- c)  $i_D(t) > 0$

$$i_D(t) = \frac{V_i(t) - 10}{R_L} > 0$$

$$i_D(t) = \frac{V_i(t) - 10}{R_L} > 0$$

$$\therefore V_i(t) - 10 > 0$$

$$\therefore V_i(t) > 10$$

$$V_o(t) = V_i - 10$$

$\therefore$  when  $V_i(t) > 10 \text{ V}$  , the diode is on and  $V_o(t) = V_i - 10$

and also we can prove that when  $V_i(t) < 10 \text{ V}$  , the diode is off

$$\therefore V_o(t) = 0$$

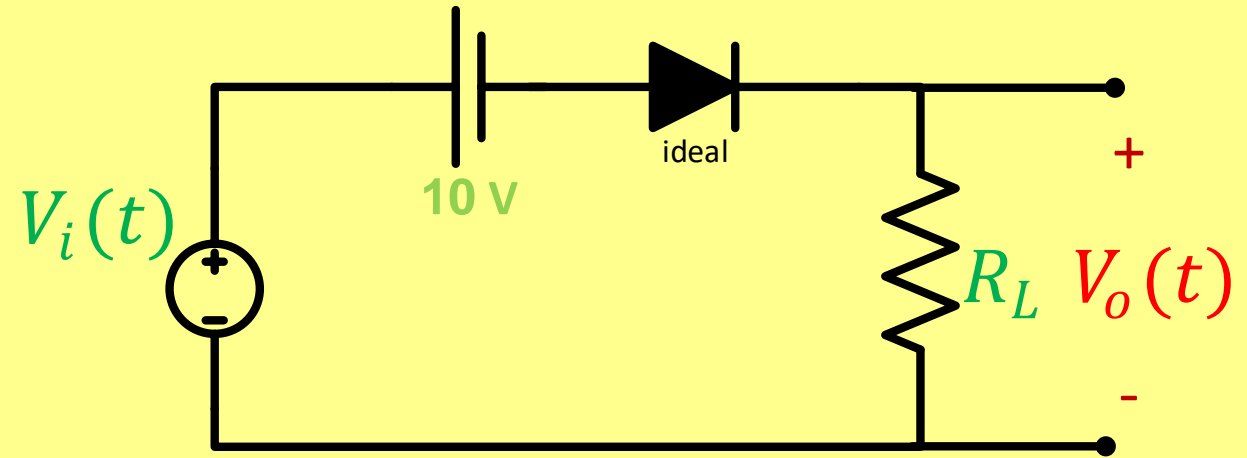

$\therefore$  when  $V_i(t) > 10\text{ V}$  , the diode is on and  $V_o(t) = V_i - 10$

$\therefore$  when  $V_i(t) < 10\text{ V}$  , the diode is off and  $V_o(t) = 0$

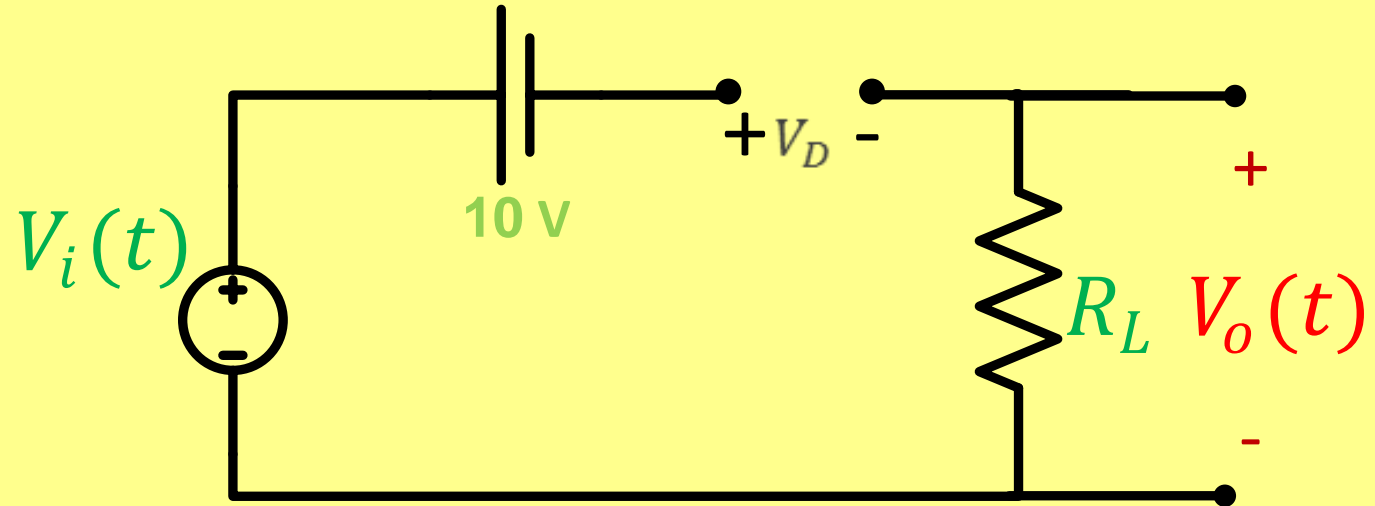

# Second method

- a) assume that the diode is off
- b) replace it with open circuit
- c)  $V_D(t) < 0$  .

$$V_D(t) = -10 + V_i$$

$$V_i(t) < 10 \text{ V}$$

$\therefore$  when  $V_i(t) < 10 \text{ V}$  , the diode is off and  $V_o(t) = 0$
