

History of Architecture

Gothic Architecture

The Middle Ages

- The middle ages were the ages between the **ancient civilization** and the **Renaissance**
- Divided into 3 period:
 - **Early middle ages (450-1000)**
 - **High middle ages (1000-1150)**
 - **Late middle ages (1150-1500)**

Early Middle Ages
6th-10th century

High Middle Ages
11th-13th century

Late Middle Ages
14th-15th century

Gothic style

- Gothic style has flourished during the **high and late medieval period** - 12th to 16th century (1150 - 1450)
- Started in **France** about **1140**, then spread to the rest of Europe
- The term "Gothic Architecture" describe the culture that was considered barbaric or even related to vandals

Geography & Chronology

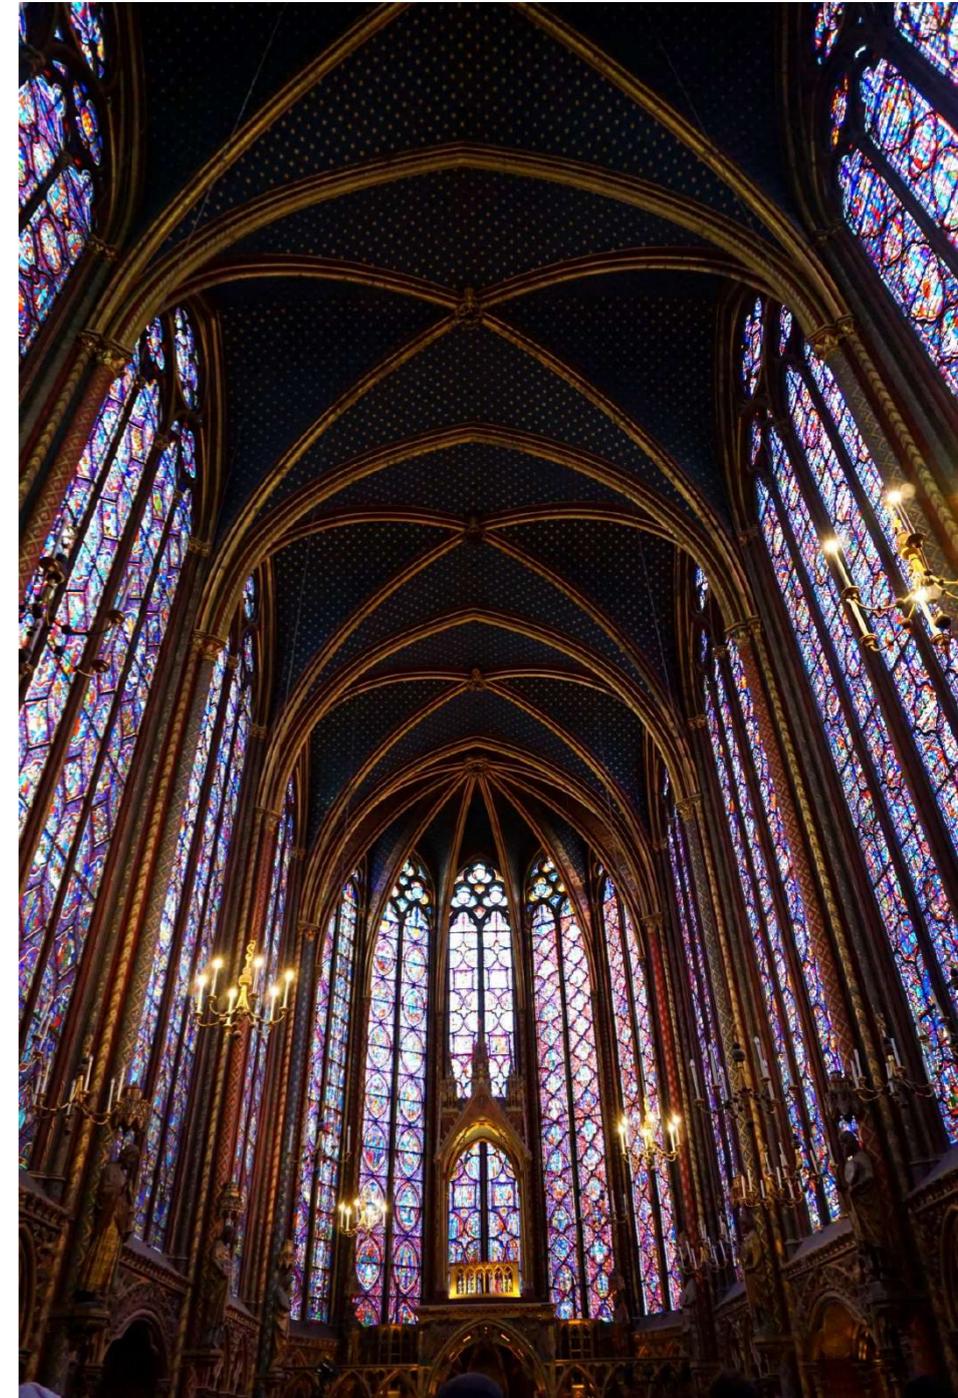

- Each area in Europe developed according to its circumstances and hence there are two timelines for gothic architecture

1. According to French Gothic:

- Early Gothic (1140-1194)
- High Gothic (1194-1300)
- Late Gothic (1300-1500)

2. According to English Gothic:

- Early English Gothic Style (1200-1300)
- Decorated Gothic Style (1300-1400)
- Perpendicular Gothic Style (1400-1500)

Politics & Social

- Growing awareness of the **nation - states** by a **common culture and language**
- Emergence of **strong central monarchies in England and France**
- Europe transformed during the late Middle Ages by two forces that reinforced each other:
 - **The emergence of cities**
 - **The growth of trade**

Louis VI, France

Politics & Social

- Major cities such as Florence, Venice, Paris, and London had population about 100,000
- 95% of Europe was rural but the 5% which were cities dominated the life and culture of Europe
- The word **Bourgeois** was created to allude to those who lived in the city and usually someone who operated a business

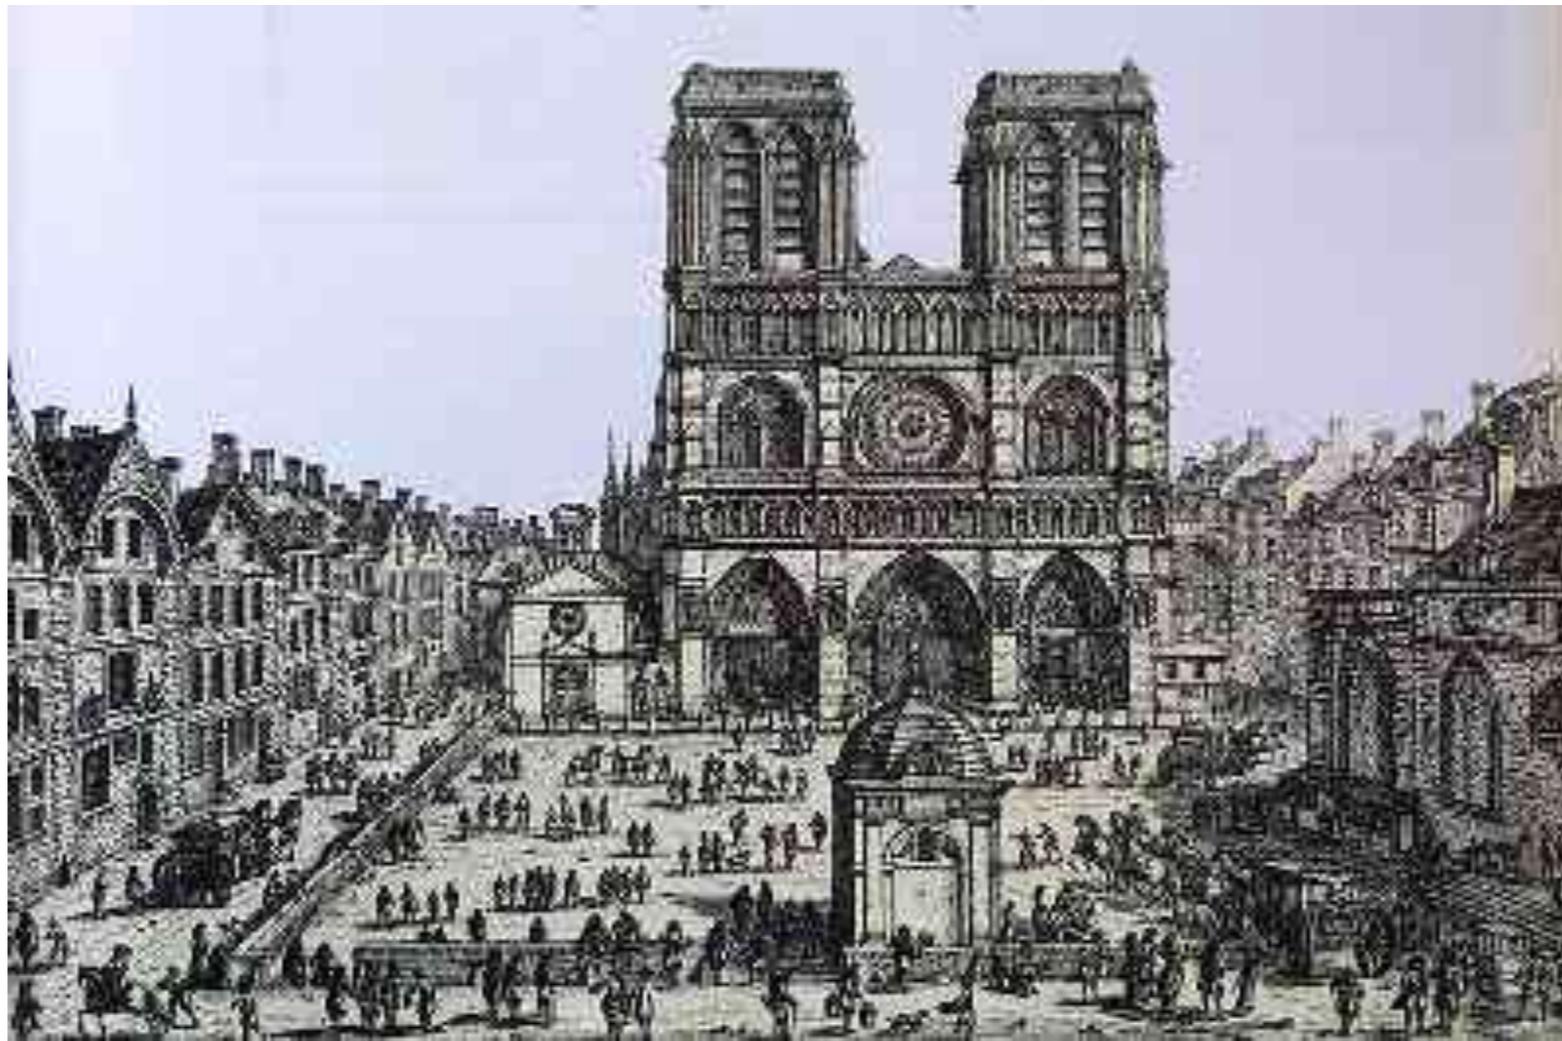

Religious Scholasticism

- The **establishment of universities** which were branches of the church and their faculty members were clerics

Architecture

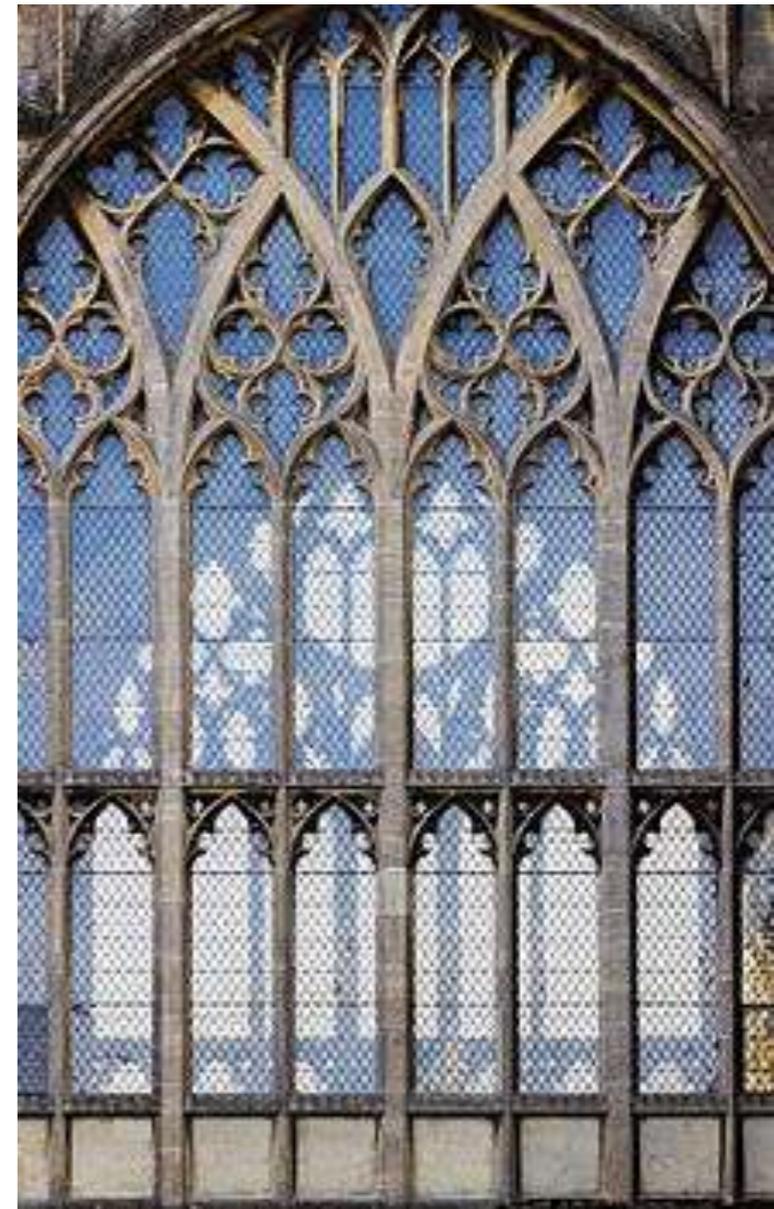

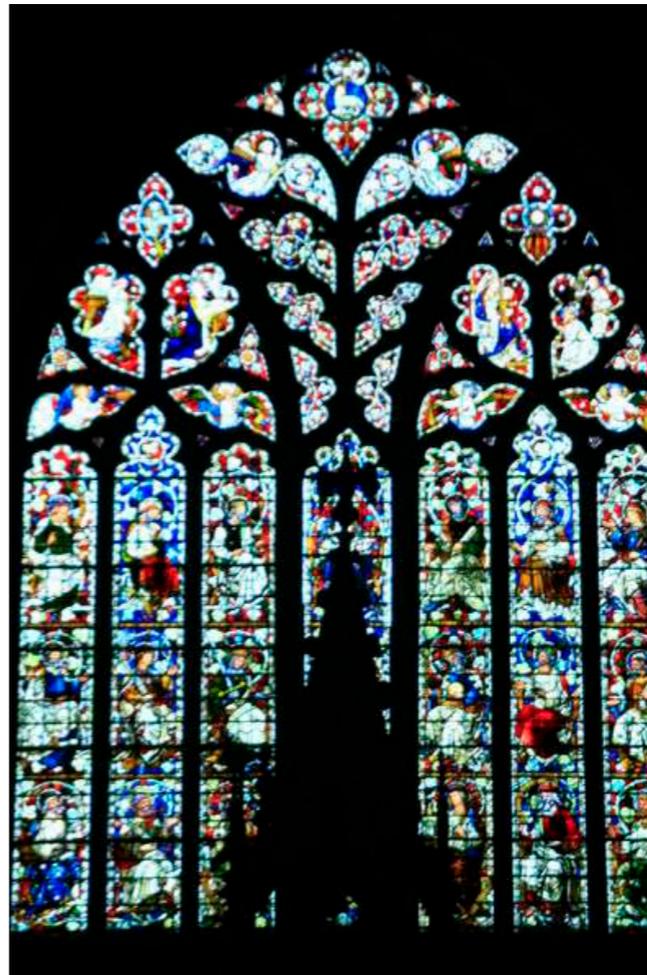

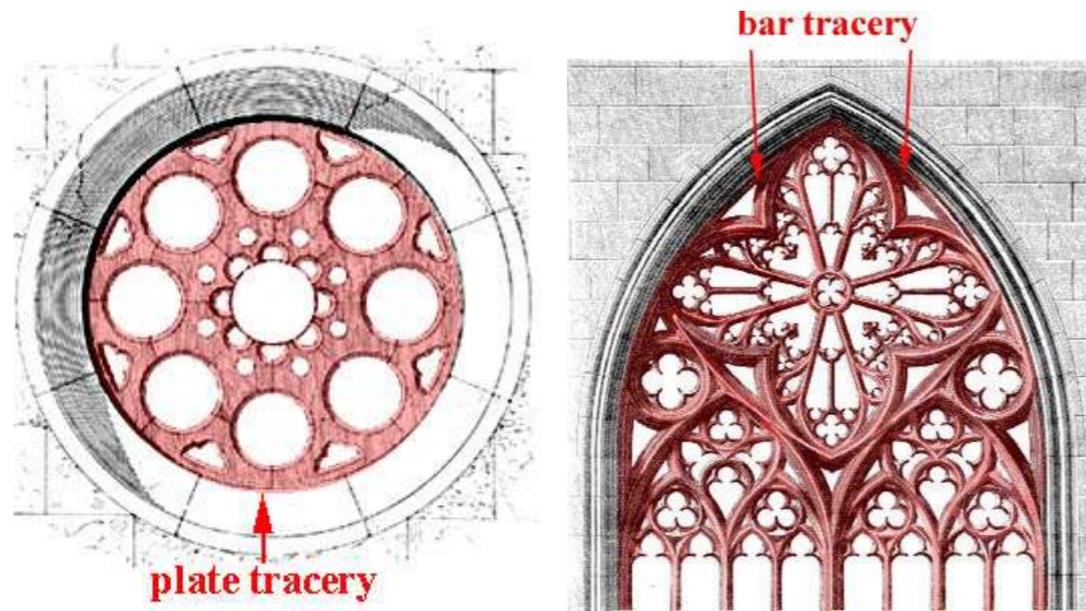

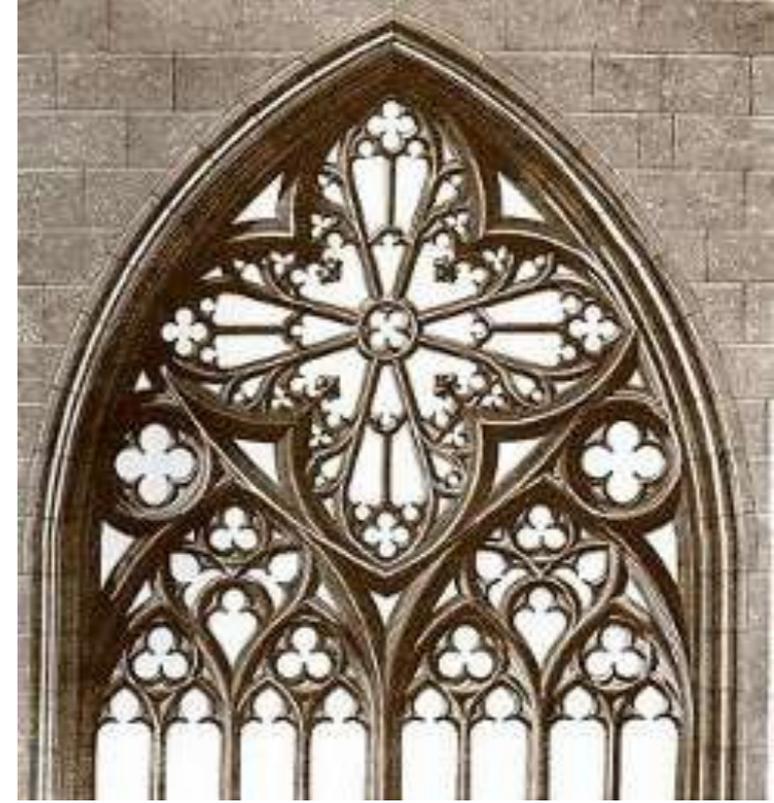

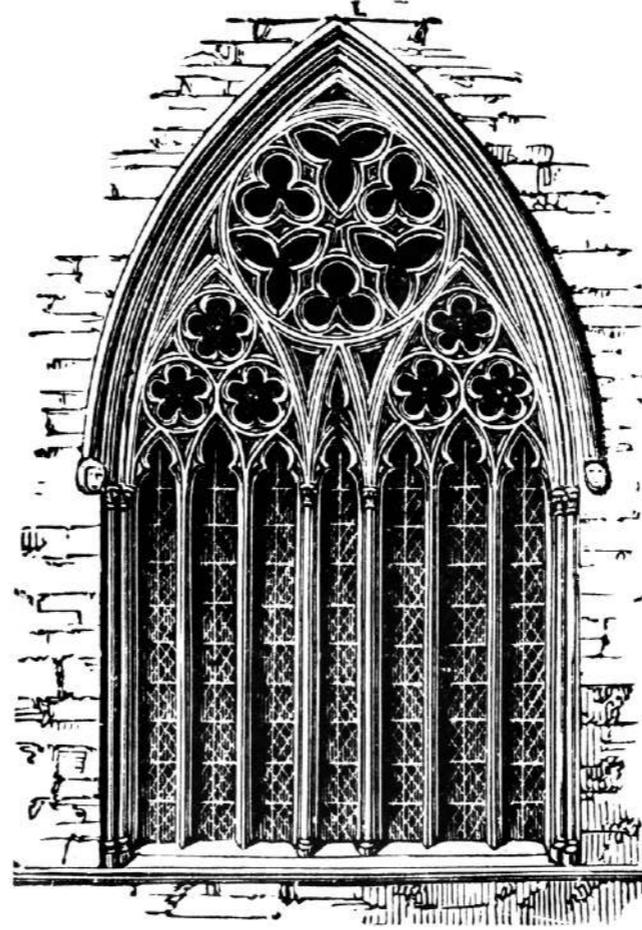

- The gothic architecture was largely an **urban architecture**
- Unlike the isolated monasteries and pilgrimage churches of the Romanesque, the gothic architecture were **urban cathedral**
- The cathedral's dedication was mostly to **Virgin Mary** (Notre - Dame) rather than to local saints

Architectural Elements

Tracery

- Bars, or ribs, used decoratively in windows or other openings
- This type of stonework decoration became more **complex** during the High Gothic

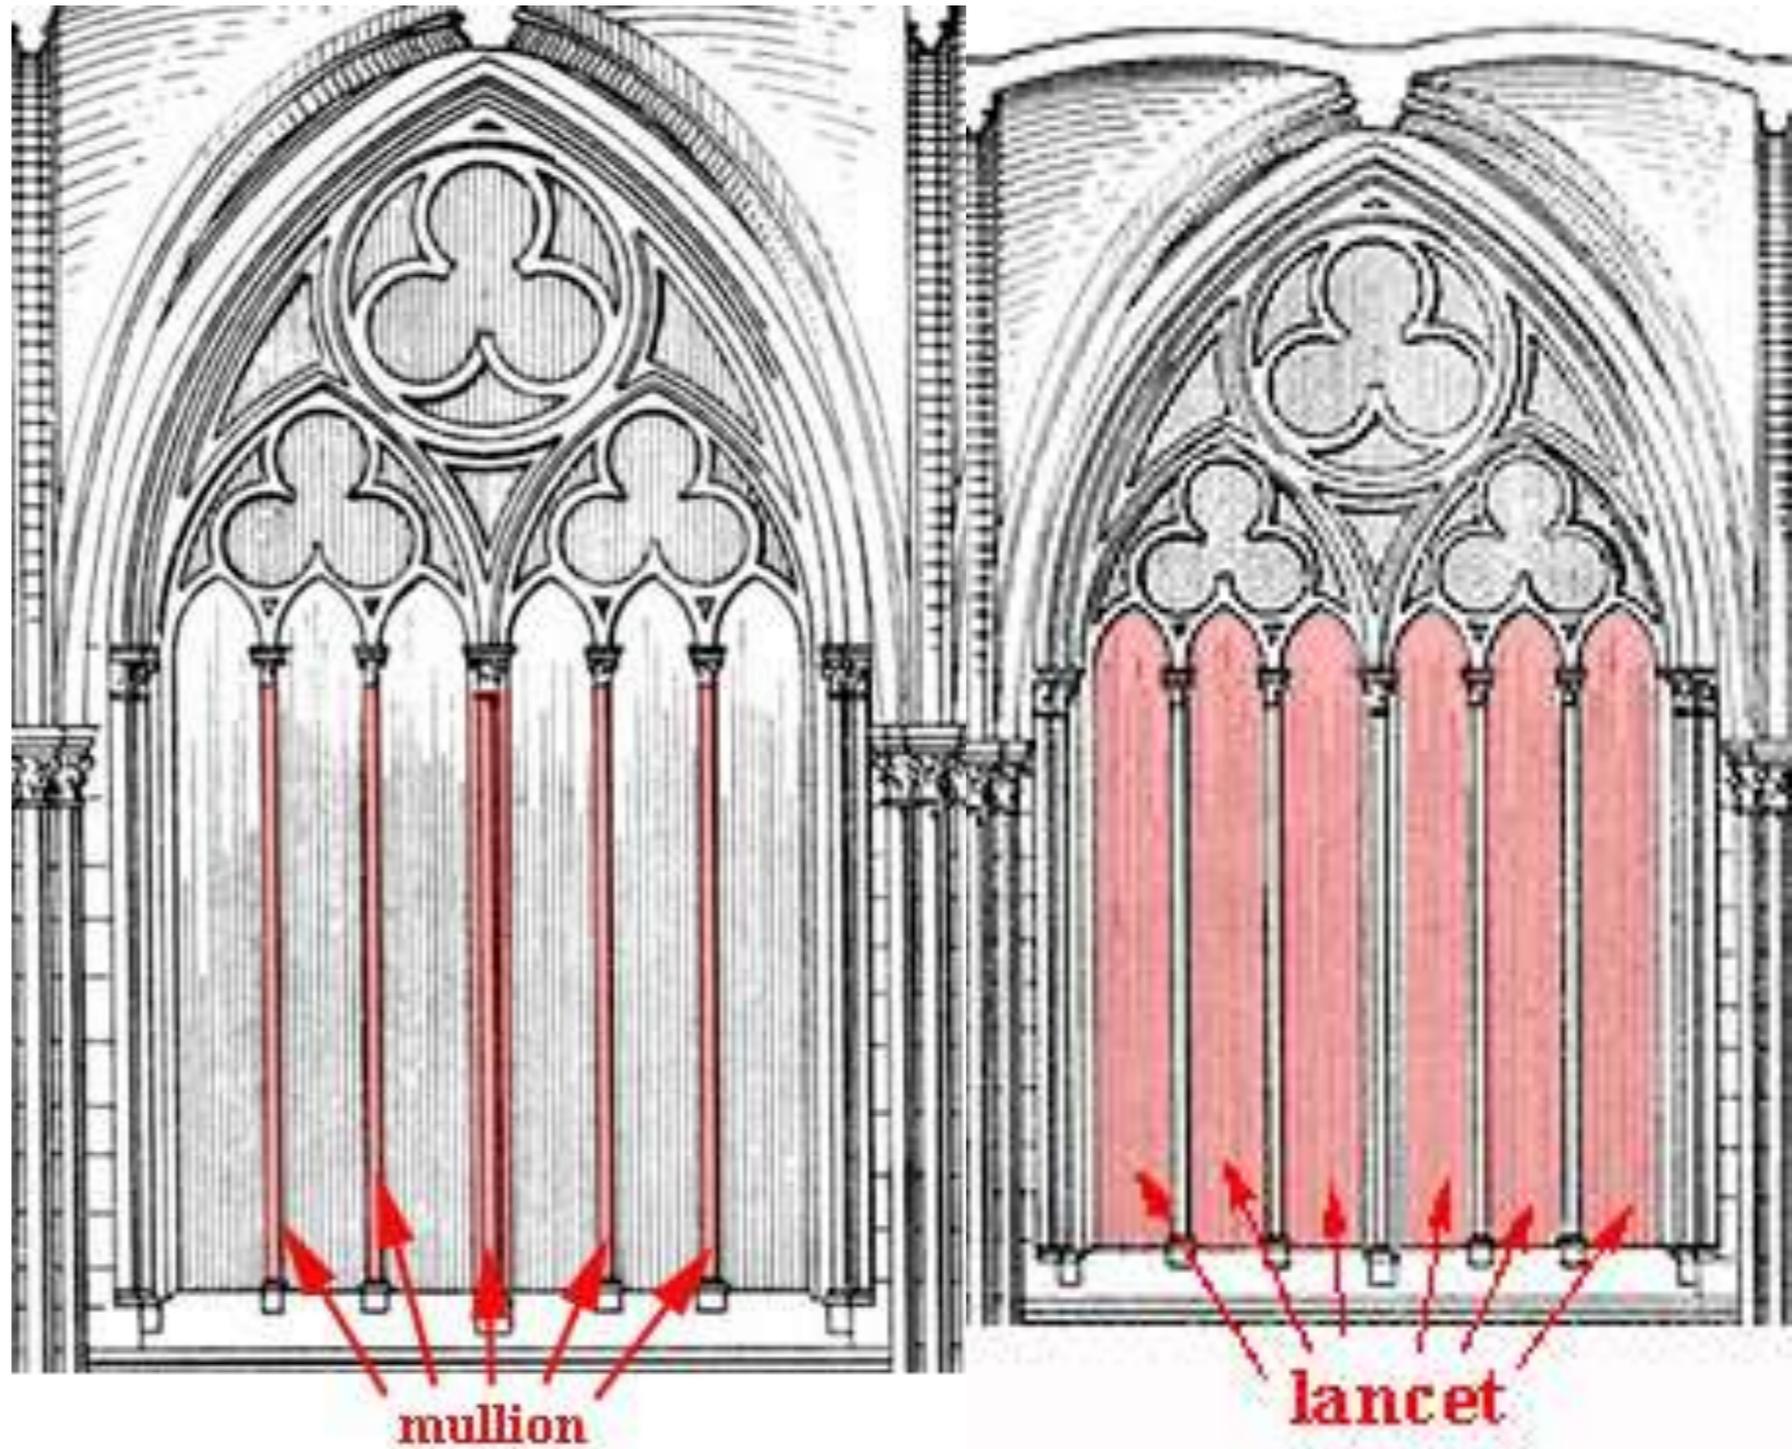

Lancet window

- A narrow window with sharp pointed arch

Mullion

- The vertical dividing bar of a rose or lancet window

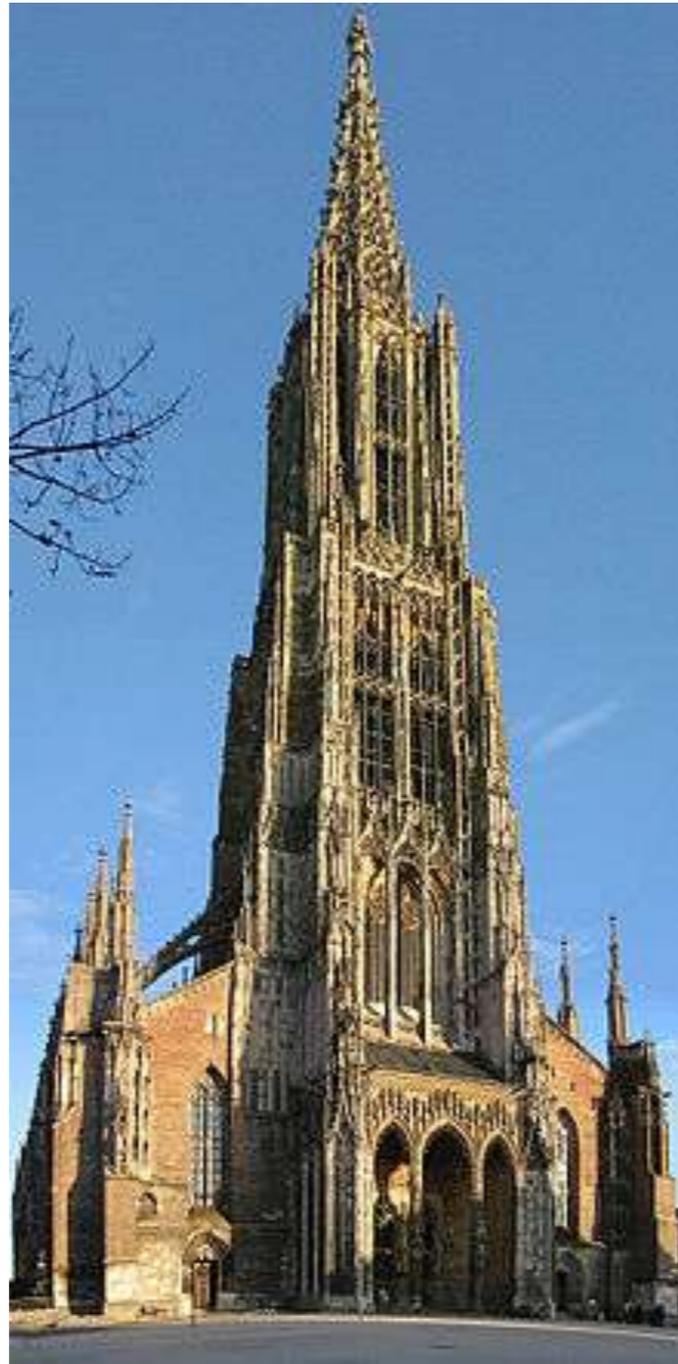

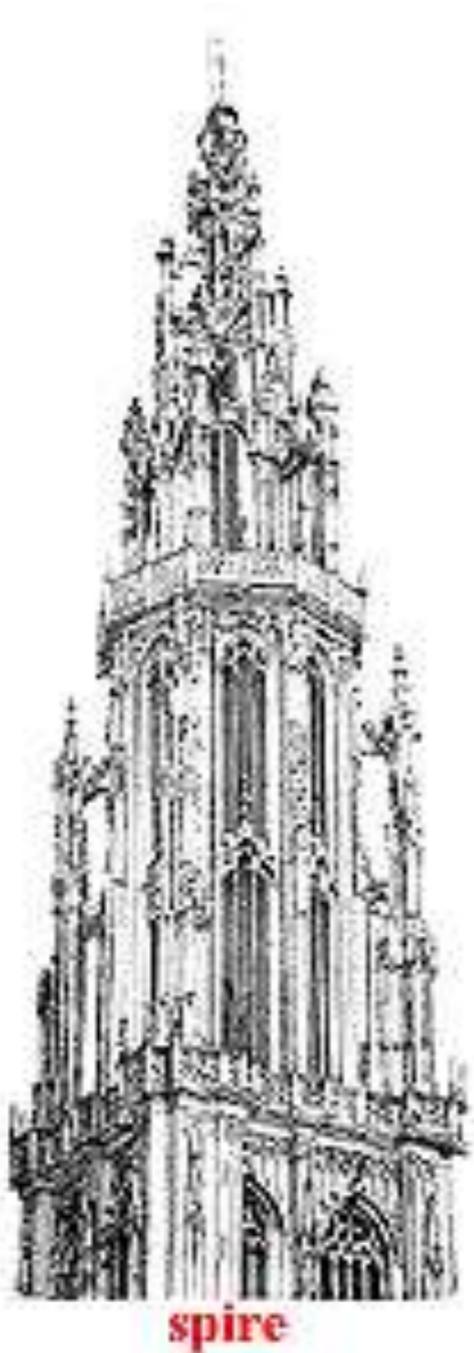

Gargoyles

- A **water sprout** terminating in an oddly carved figure of a human animal, and projecting from the gutter of a cathedral

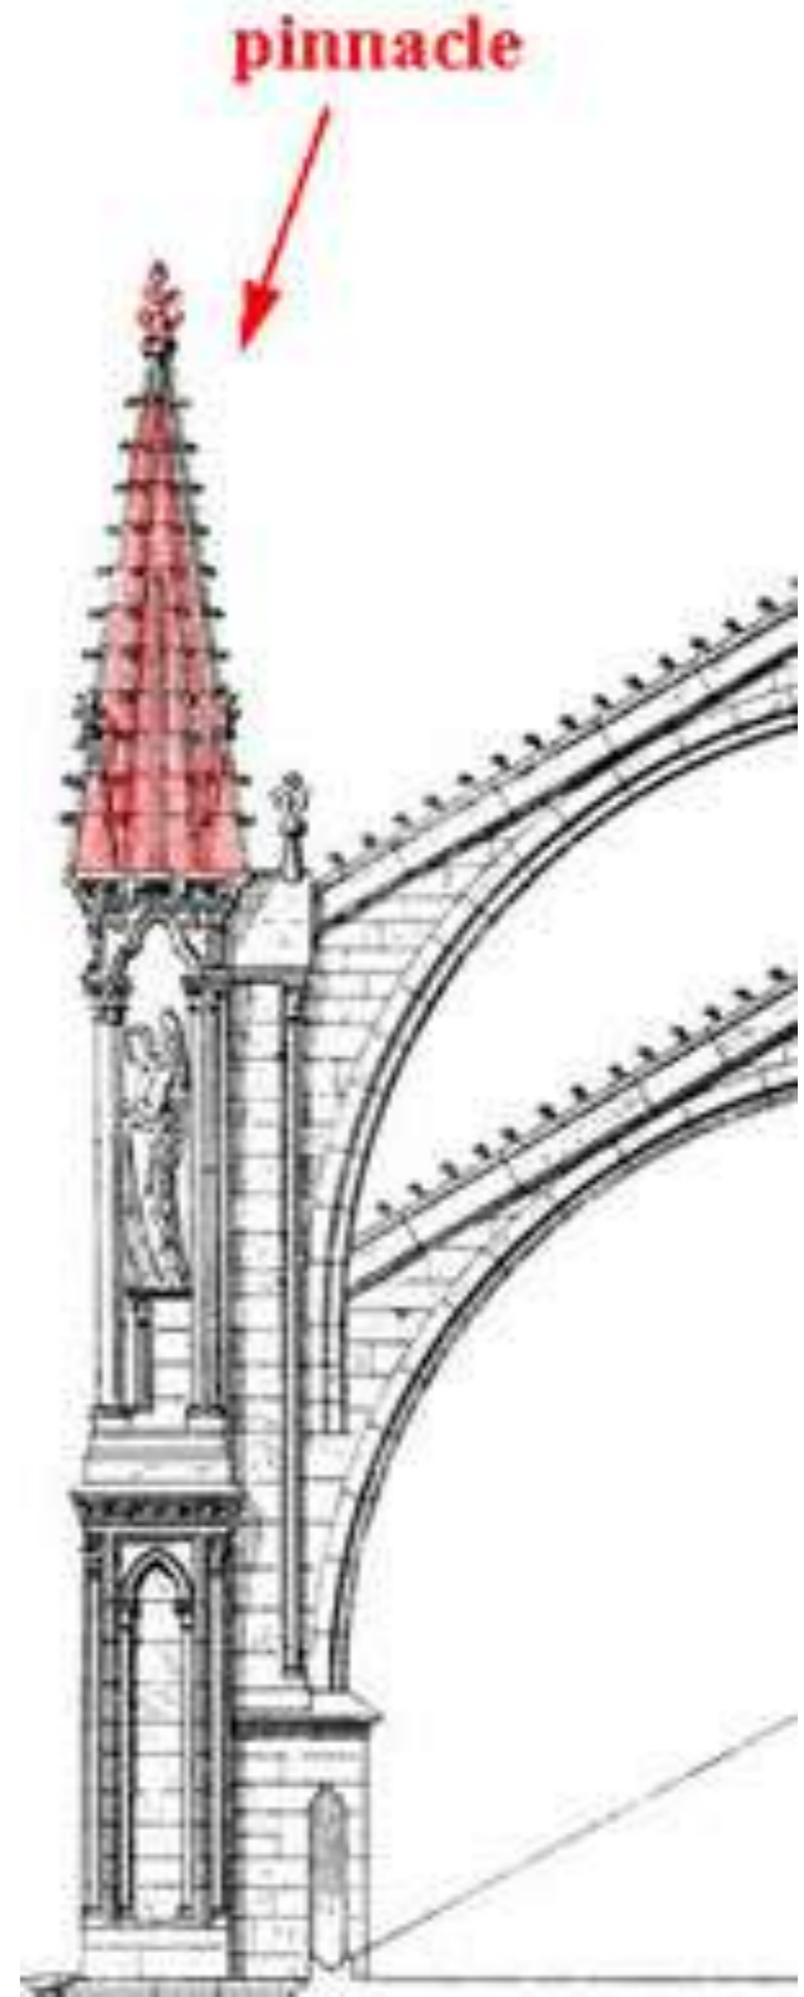

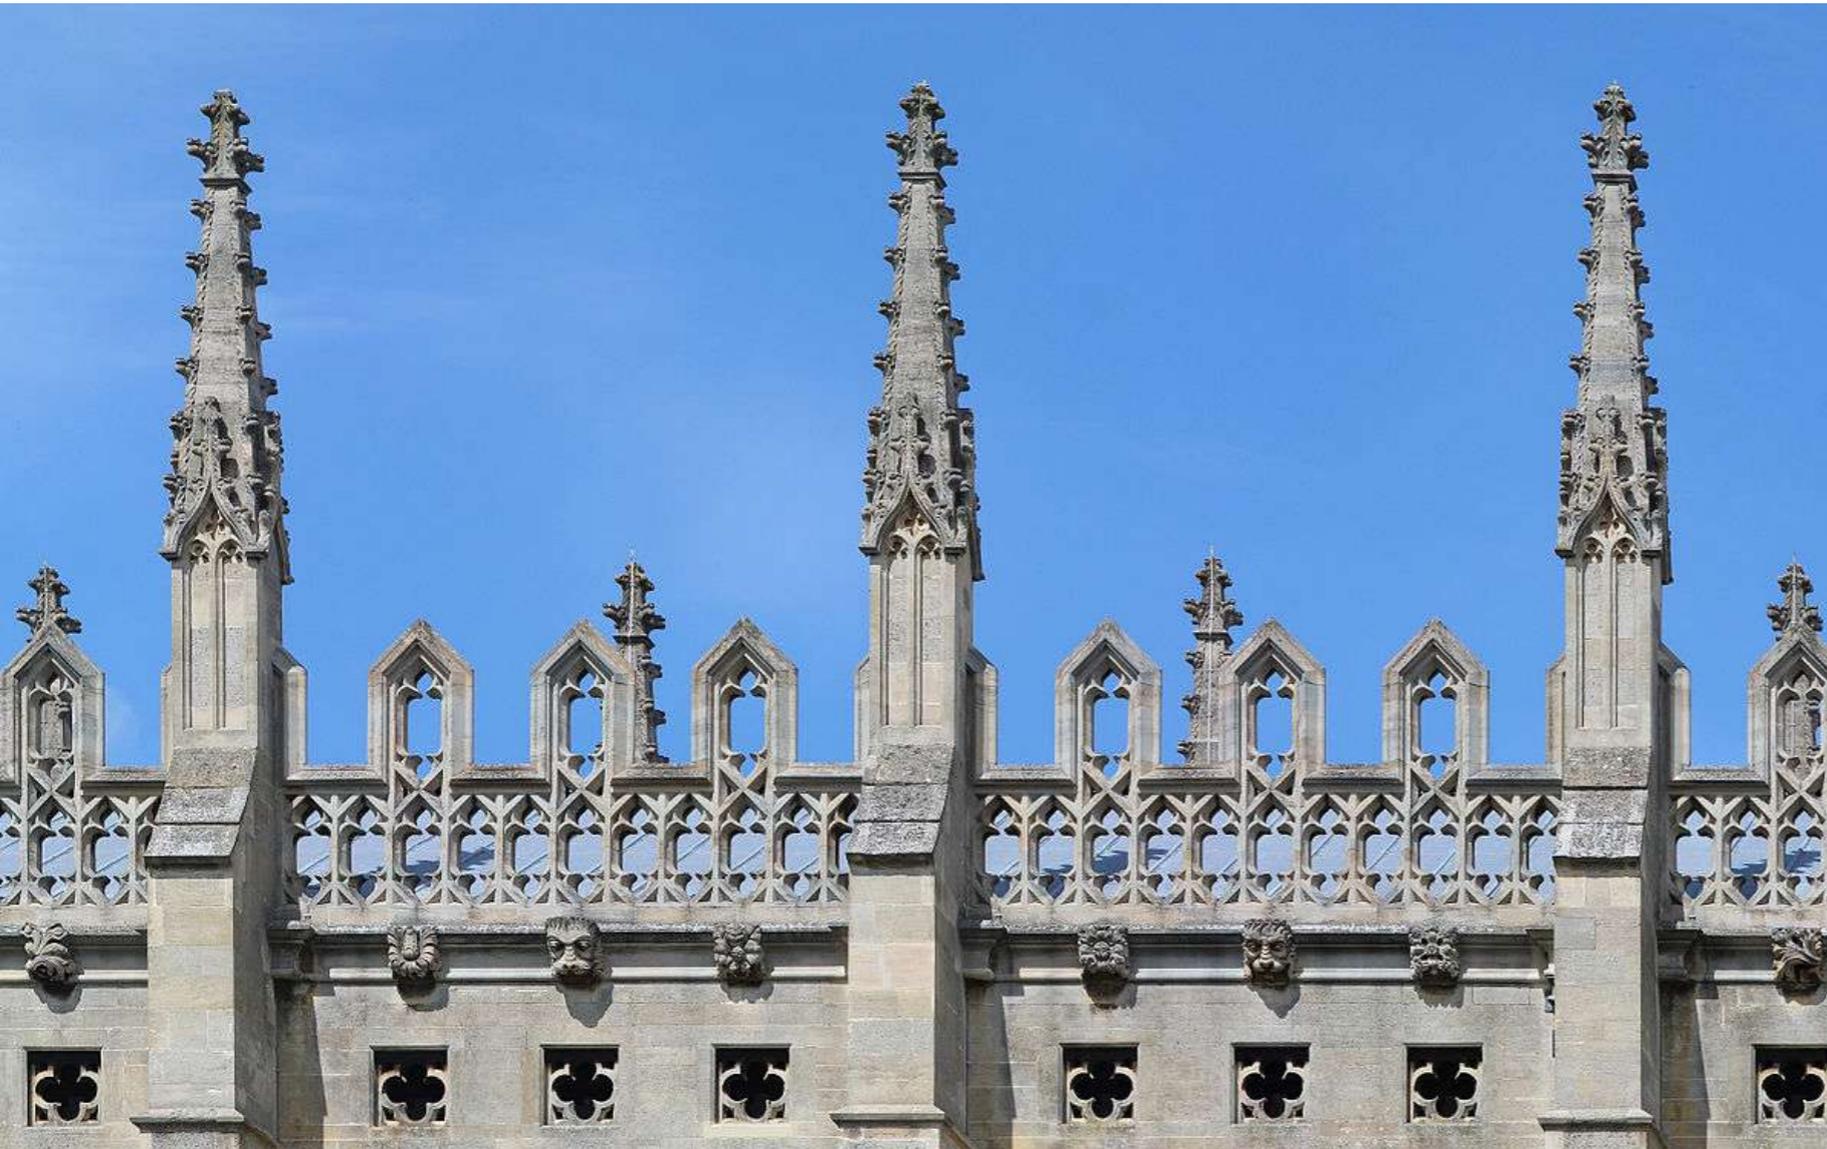

Spire

- A sharply pointed pyramidal or conical structure surmounting a tower

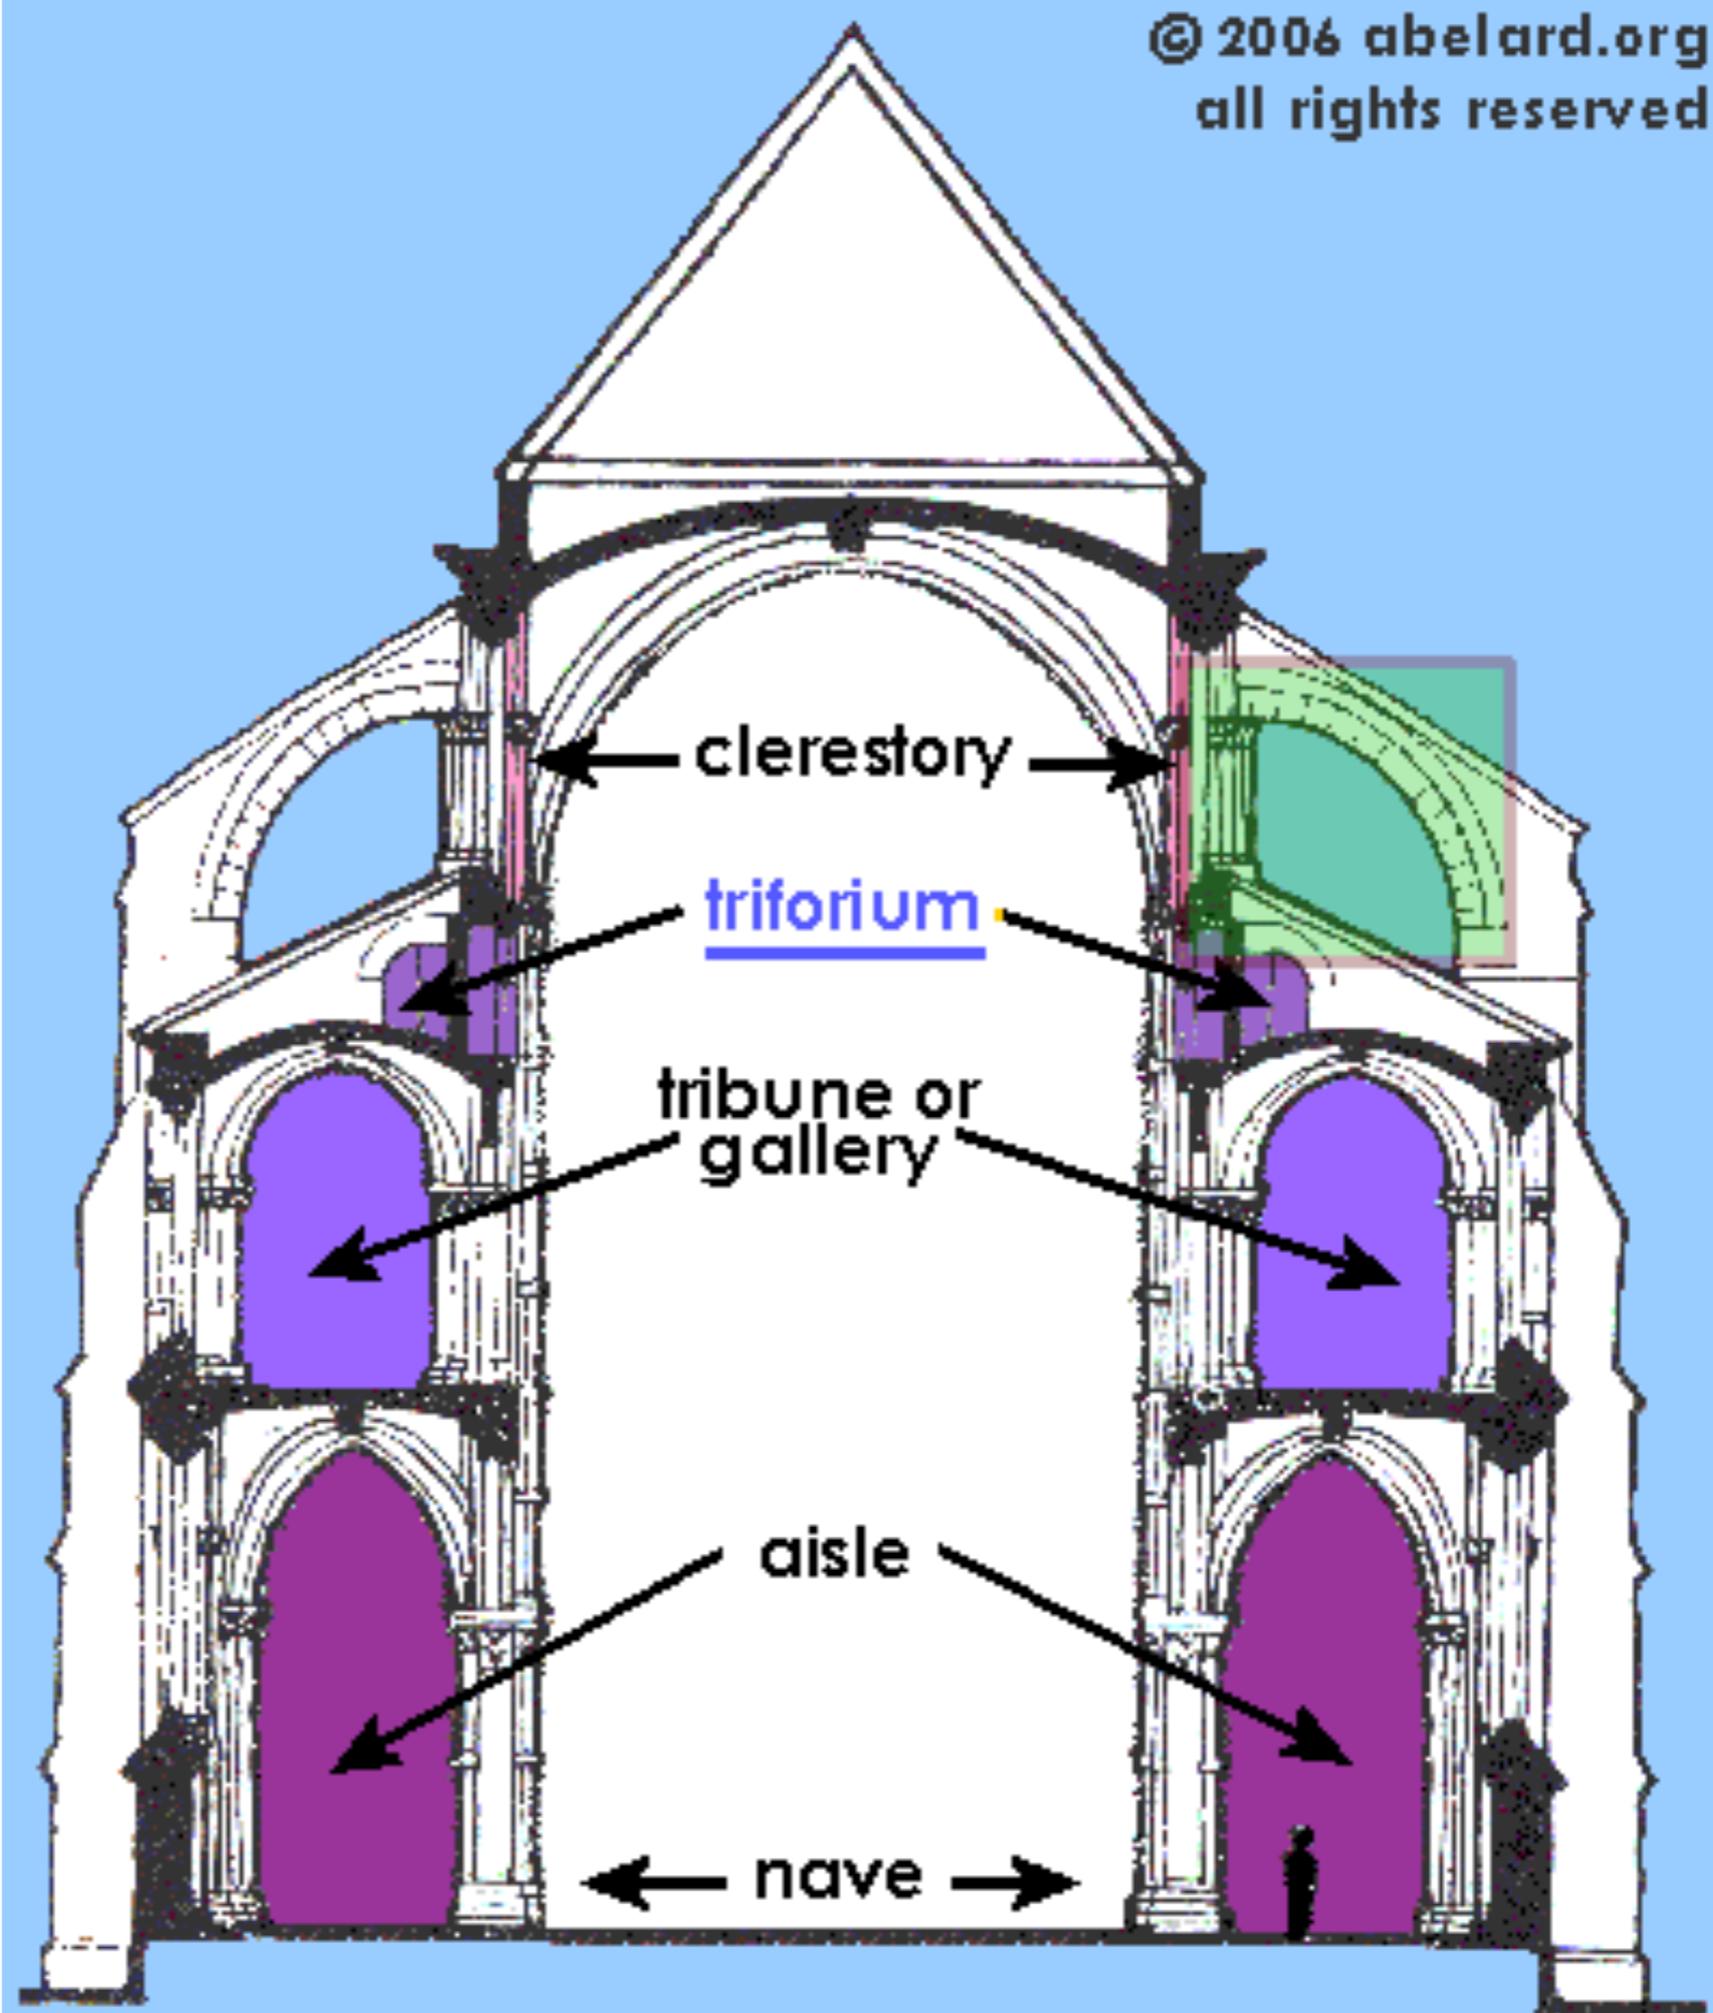

Pinnacle

- Small narrow pointed tower initially capping buttresses and openwork gables or portals and galleries
- The pinnacle looks like a small spire

Interior levels:

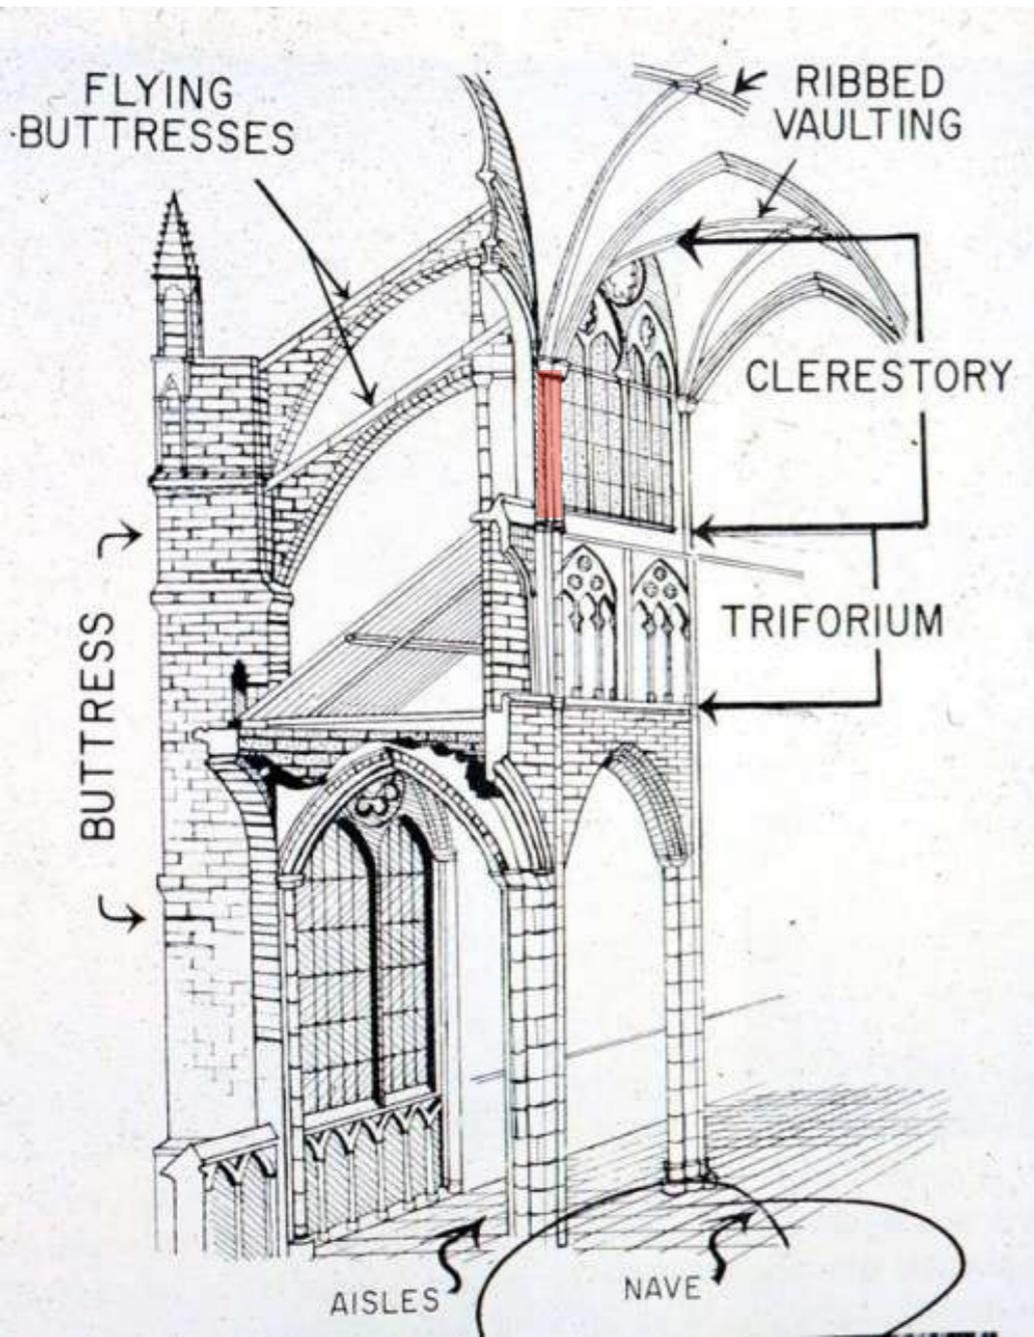

Architectural Character

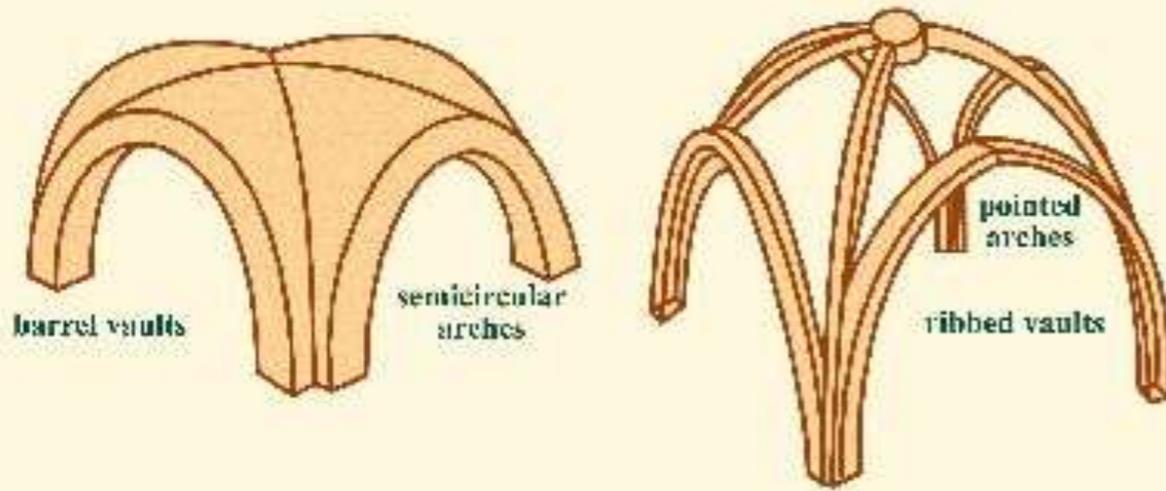

- Revolution in building techniques, that was achieved through the use of **pointed arches** and **ribbed vaults**
- This allowed:
 - higher ceilings
 - thinner walls
 - slim columns
 - incredible openness

- Since the outward thrusts of the vaults were concentrated in the small areas at the springing of the ribs, pressure could be counteracted by narrow buttresses and by external arches, called **flying buttresses**

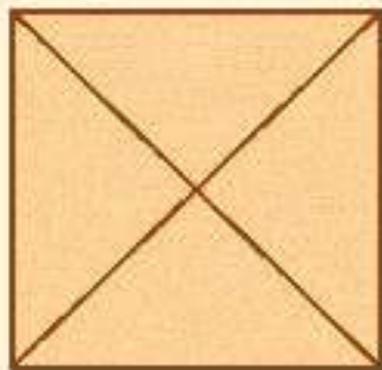

- Buildings had a **stone skeleton** made of the **internal columns** of the arcade with their attached shafts, the **ribs of the vaults** in addition to the external **flying buttresses**

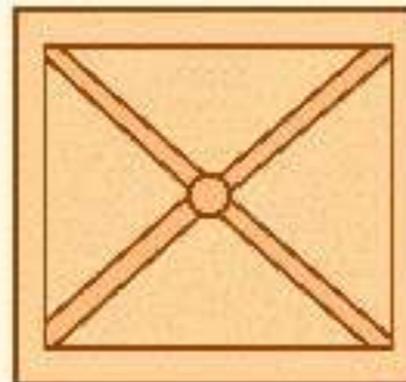

Romanesque vault

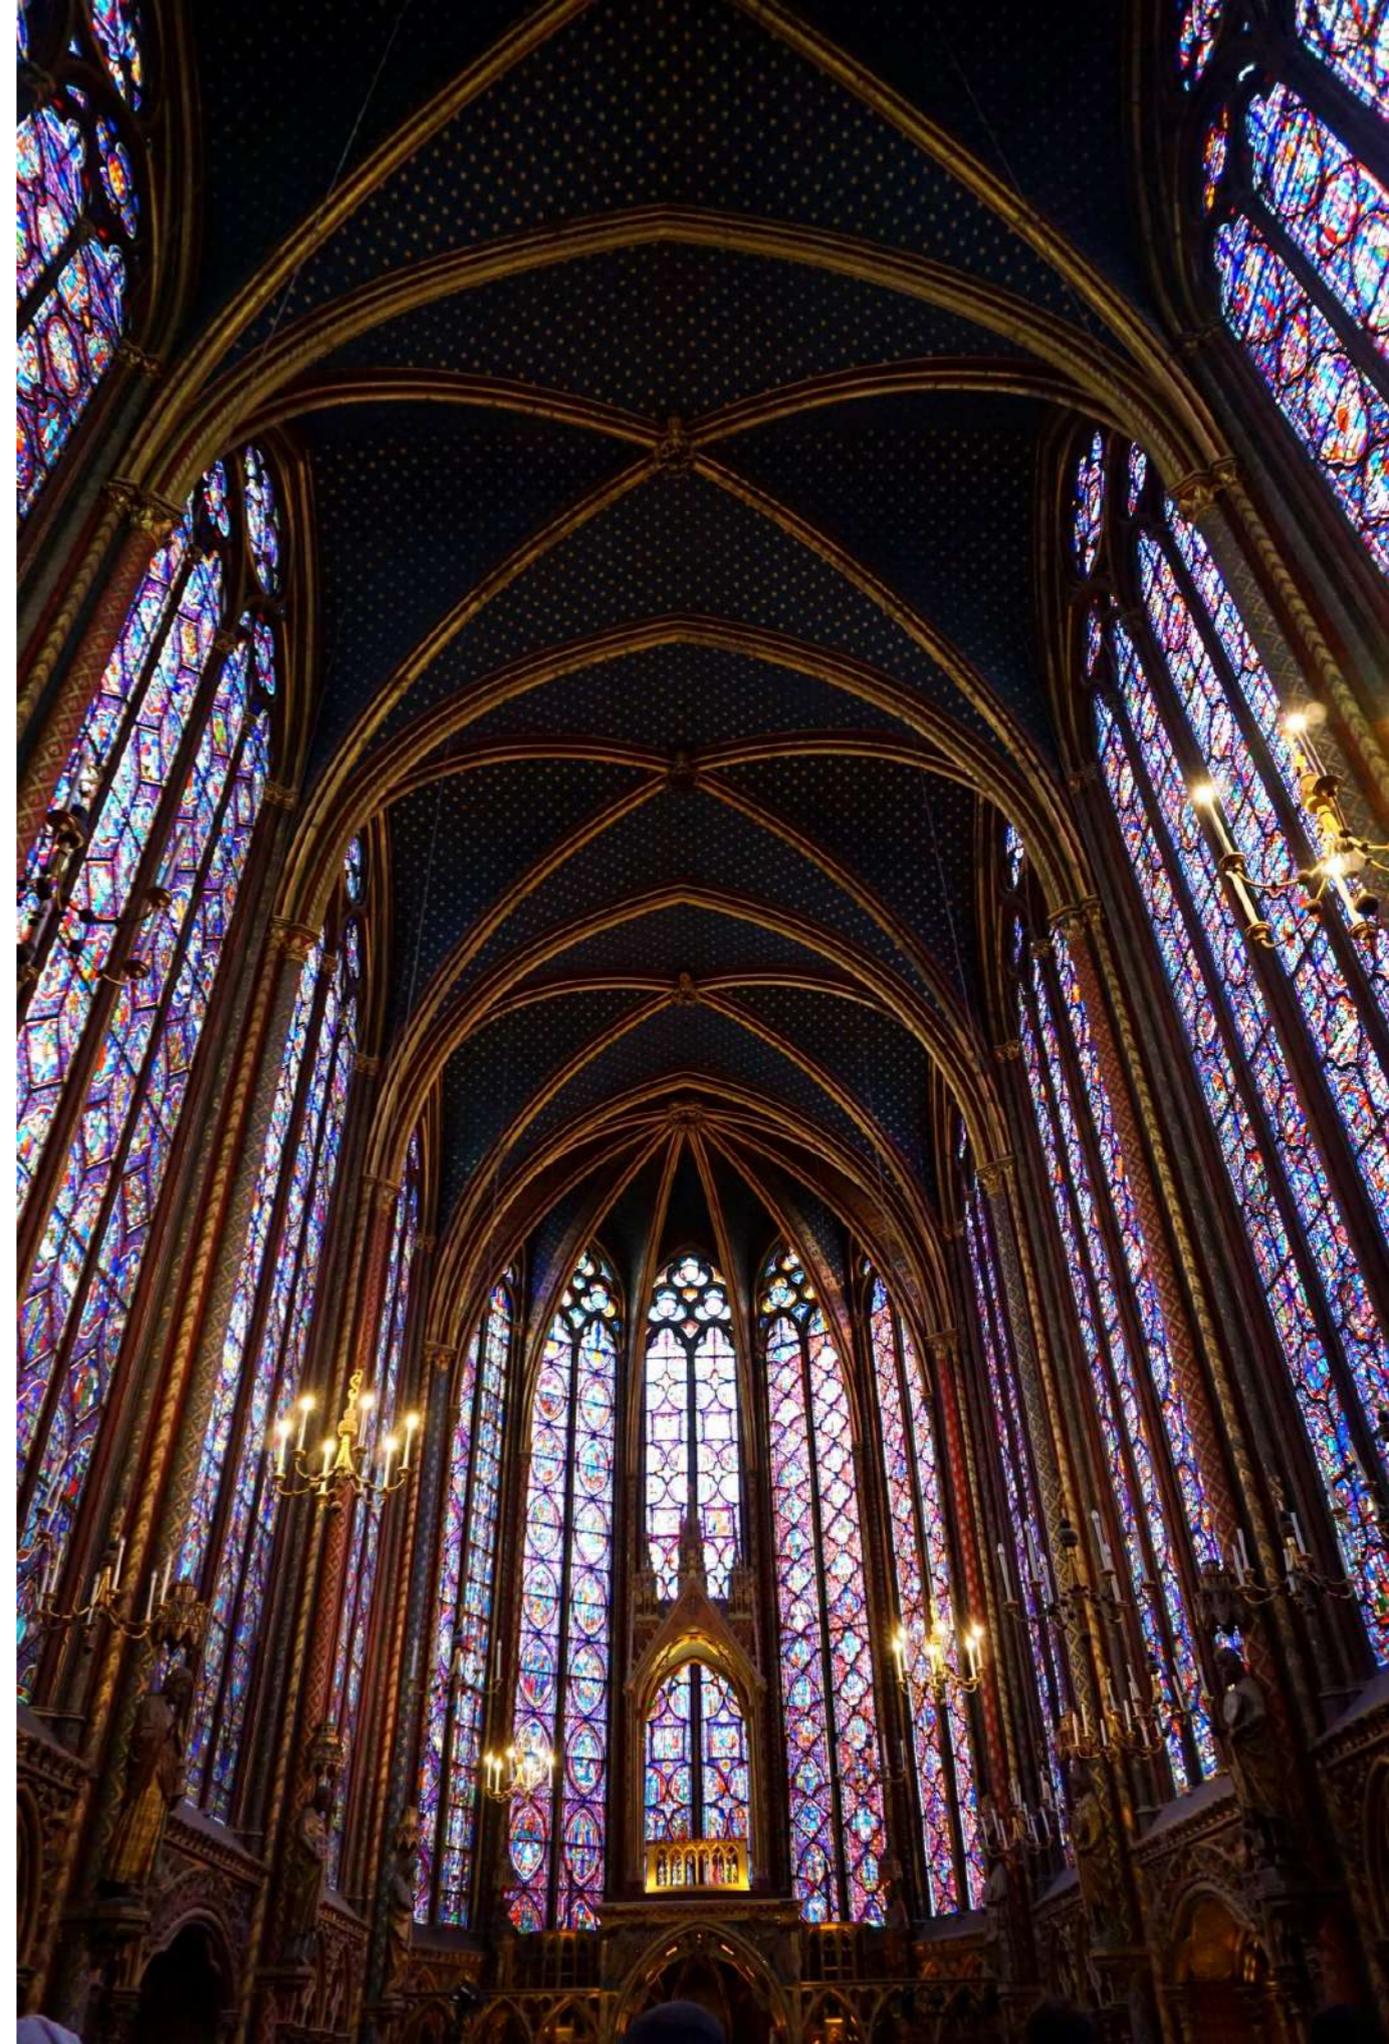

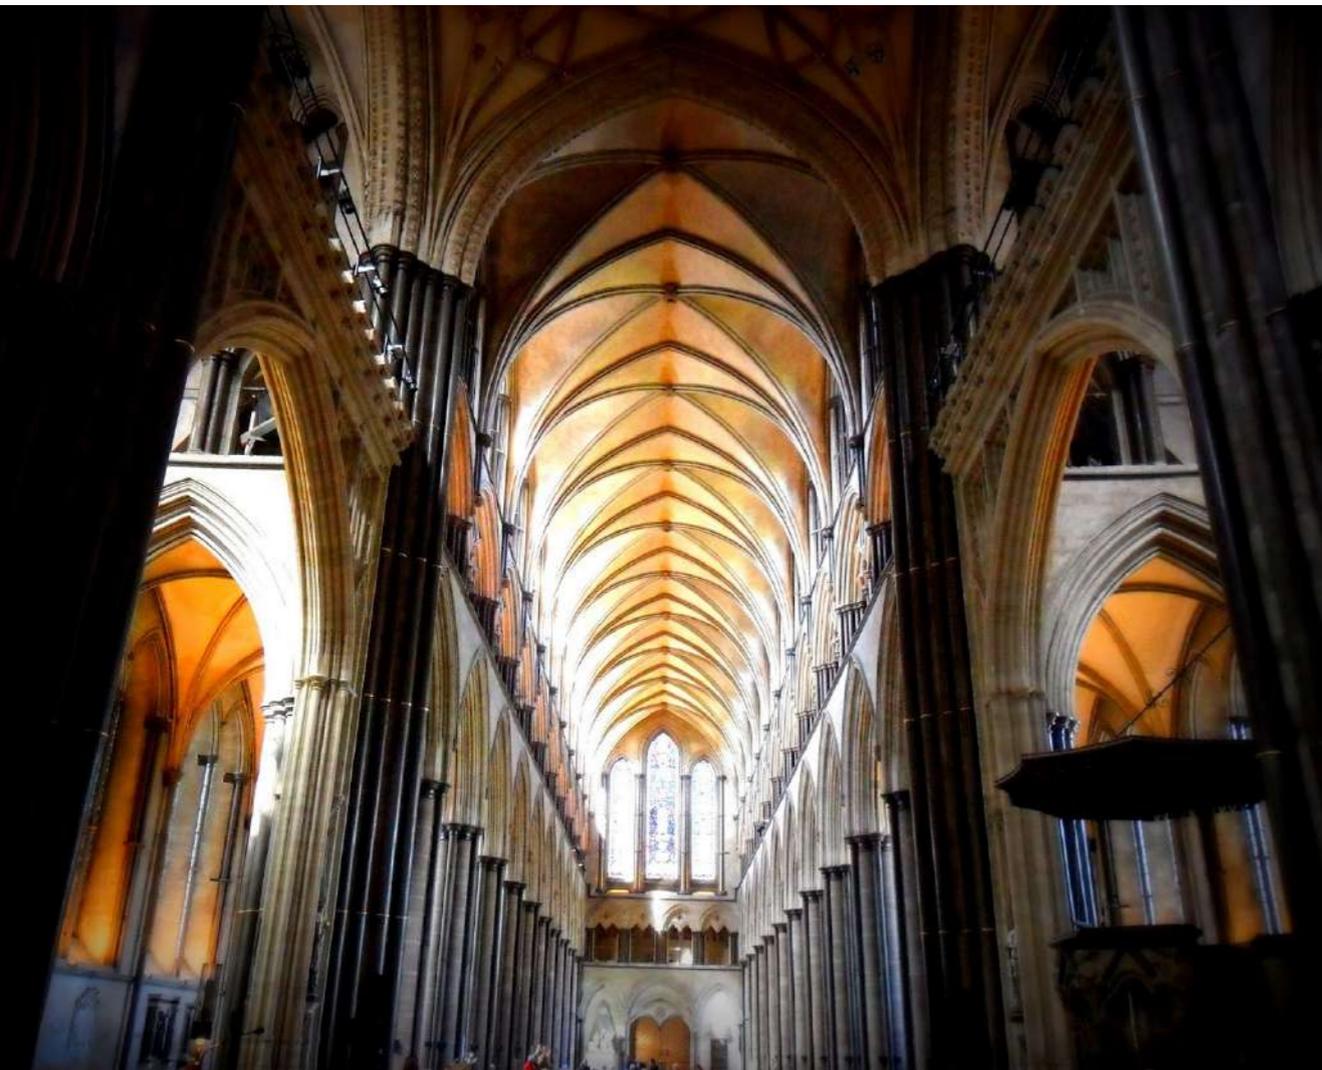

Gothic vault

view from top

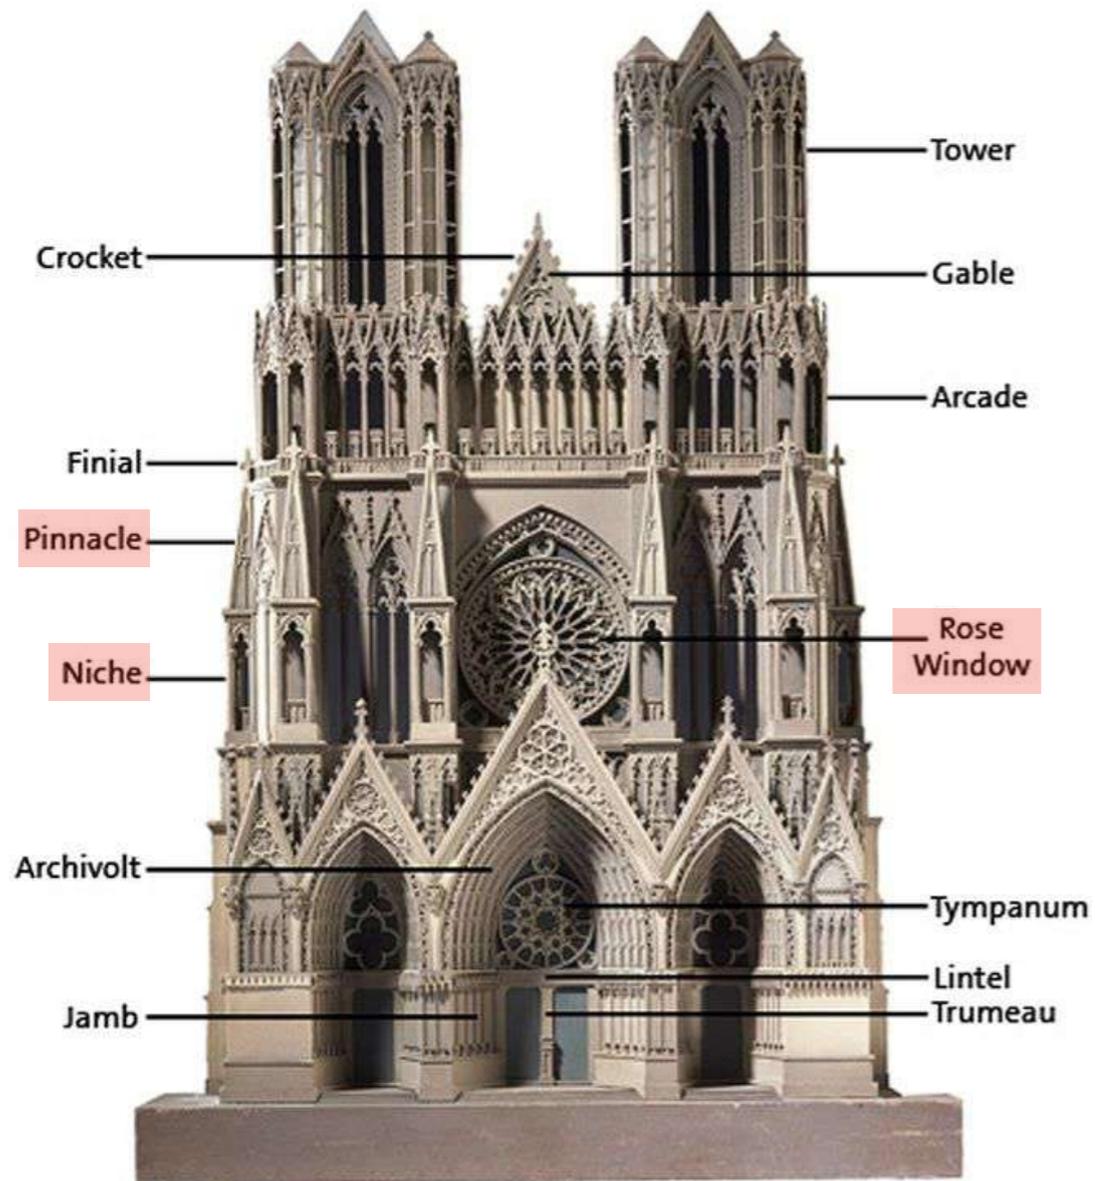

- Light appears to triumph over substance
- Light to **symbolize the eternal light of God**

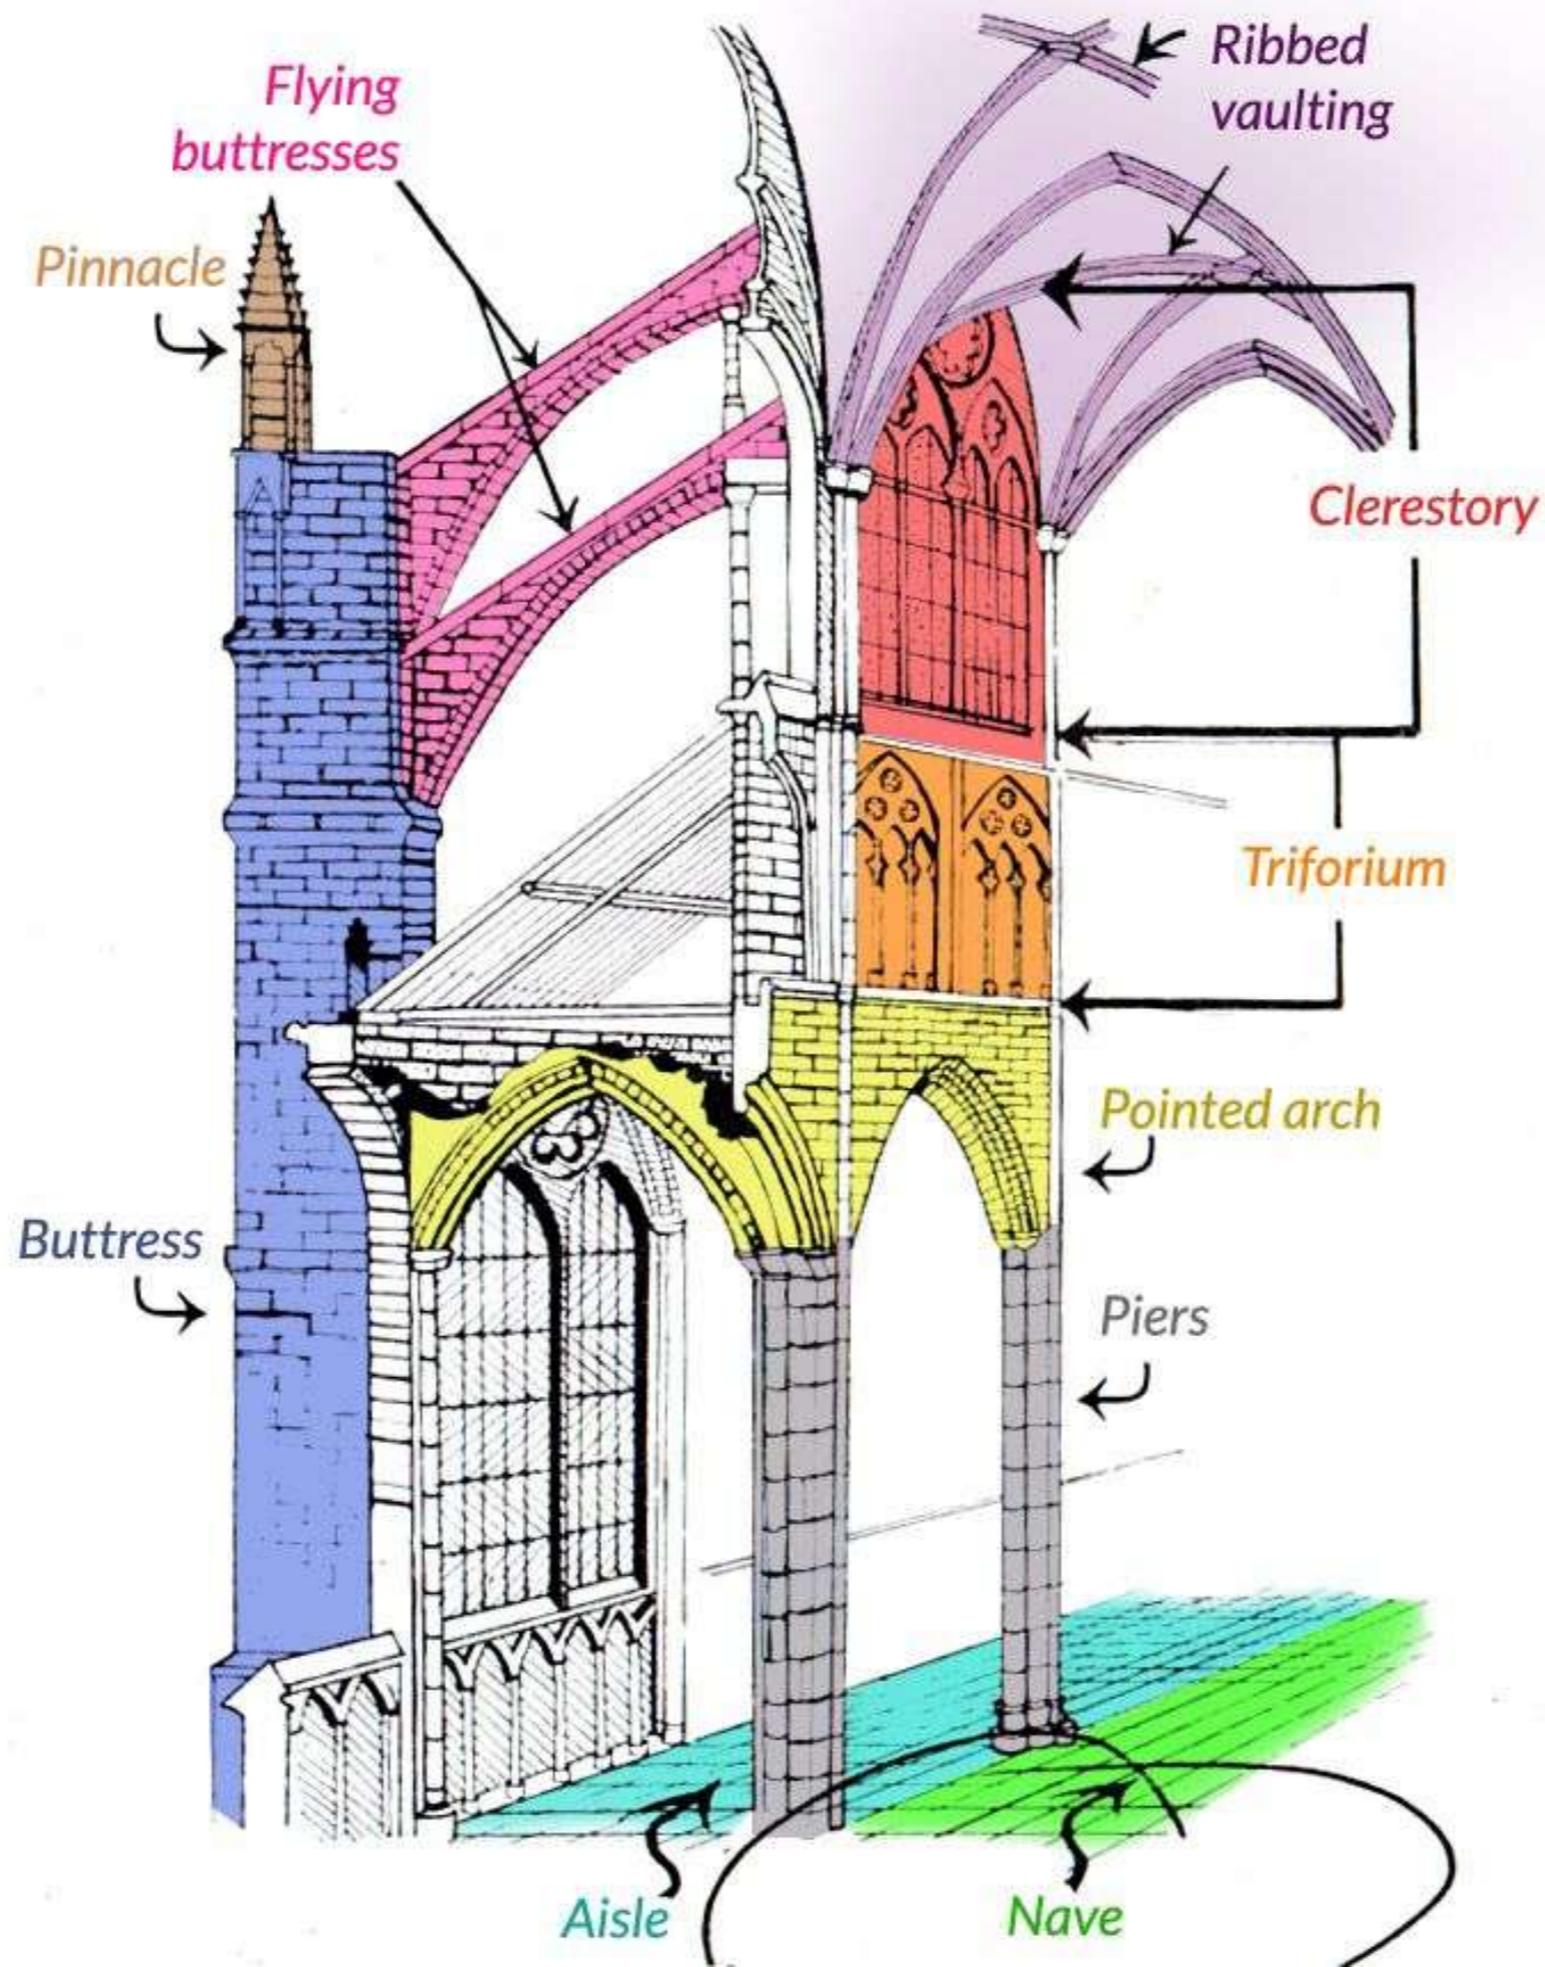

- **Vertical emphasis** both in exterior and interior
- The proportion of the nave height to its width is usually **2:1**, and reaches **3:1** in some cathedrals

- Magnificent **elaborated facade**
- A **central recessed portal**
- A **rose window** and other **patterns of windows**

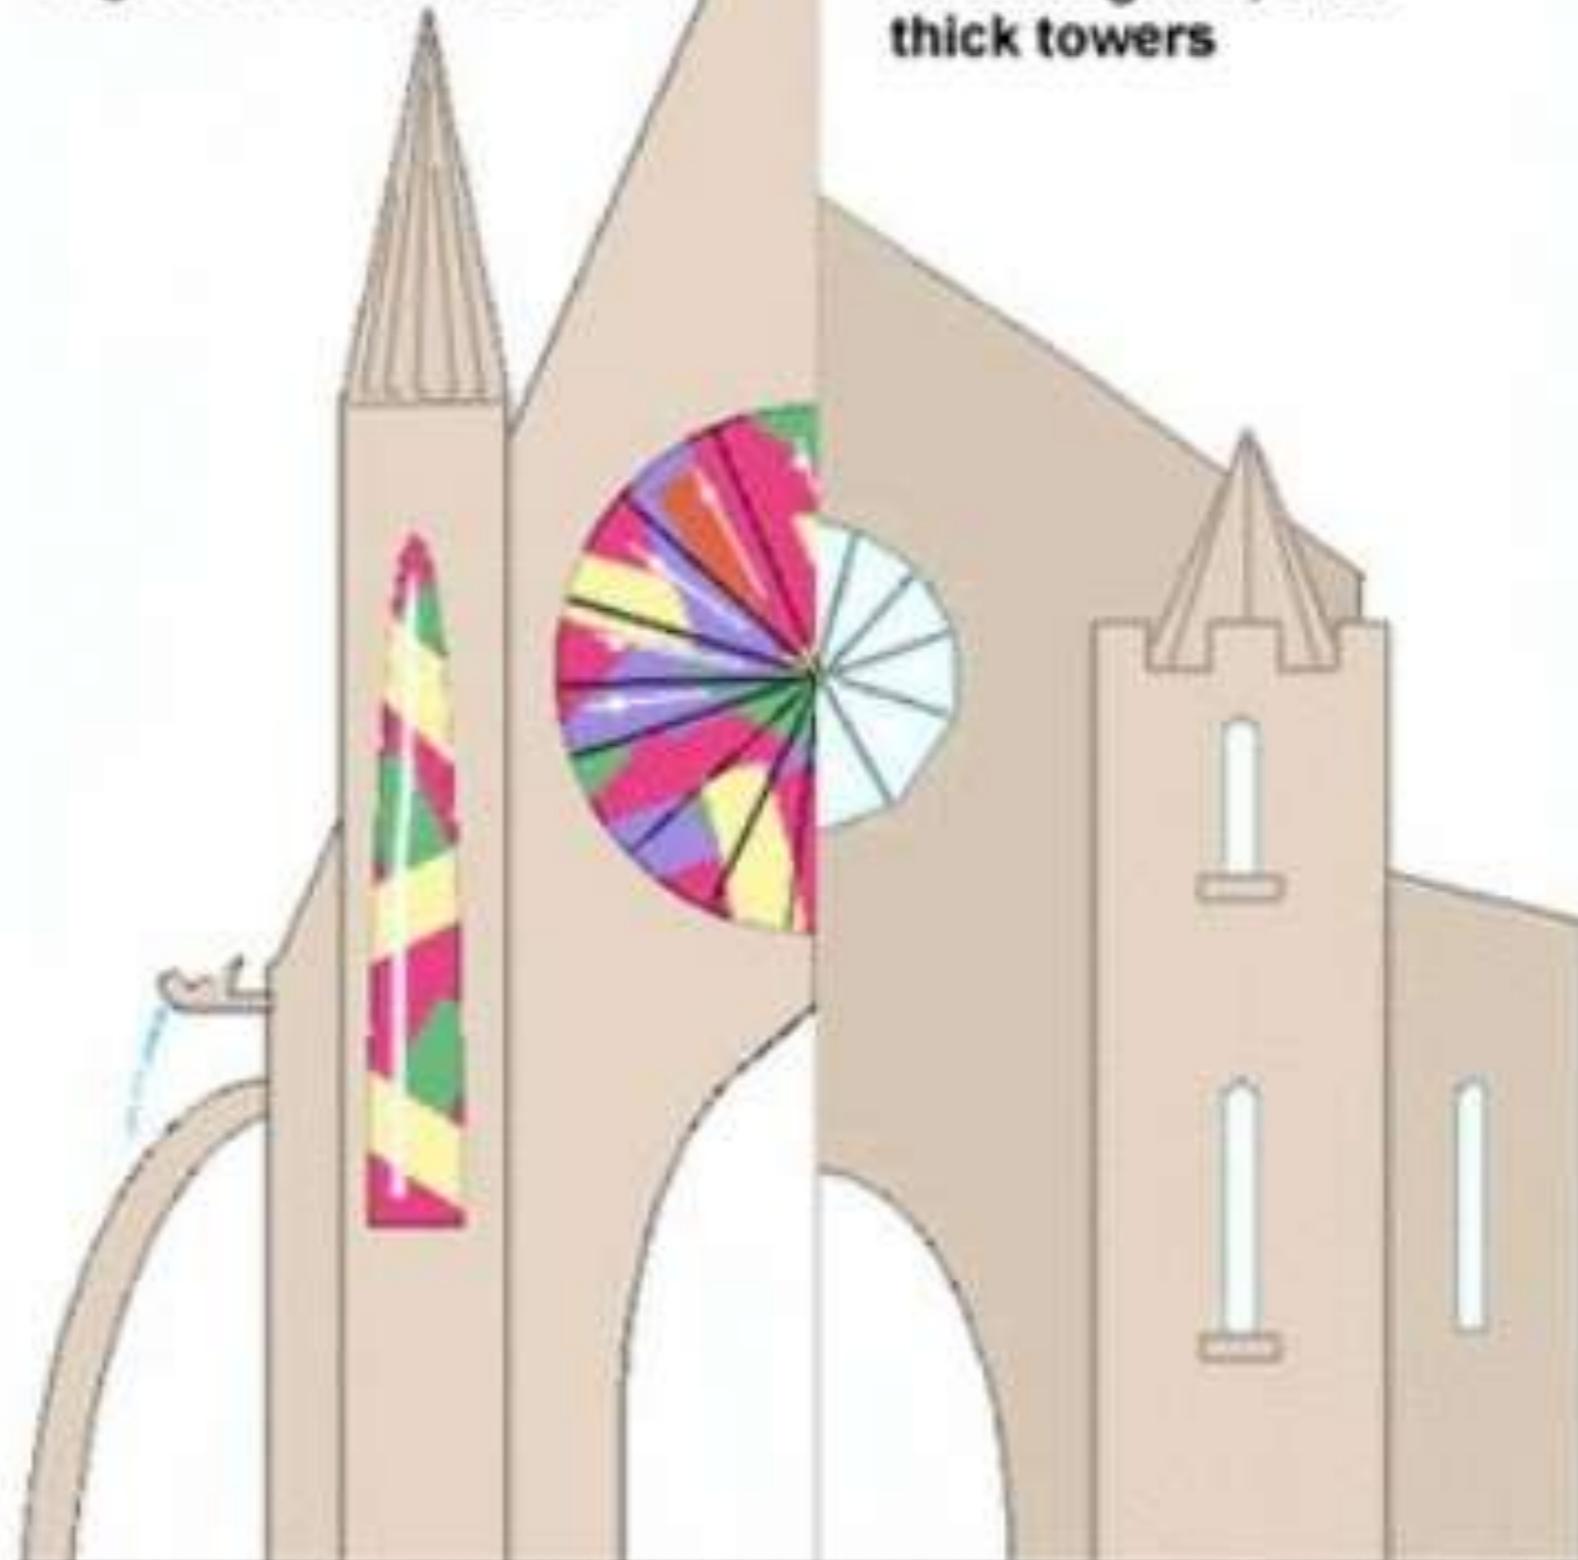

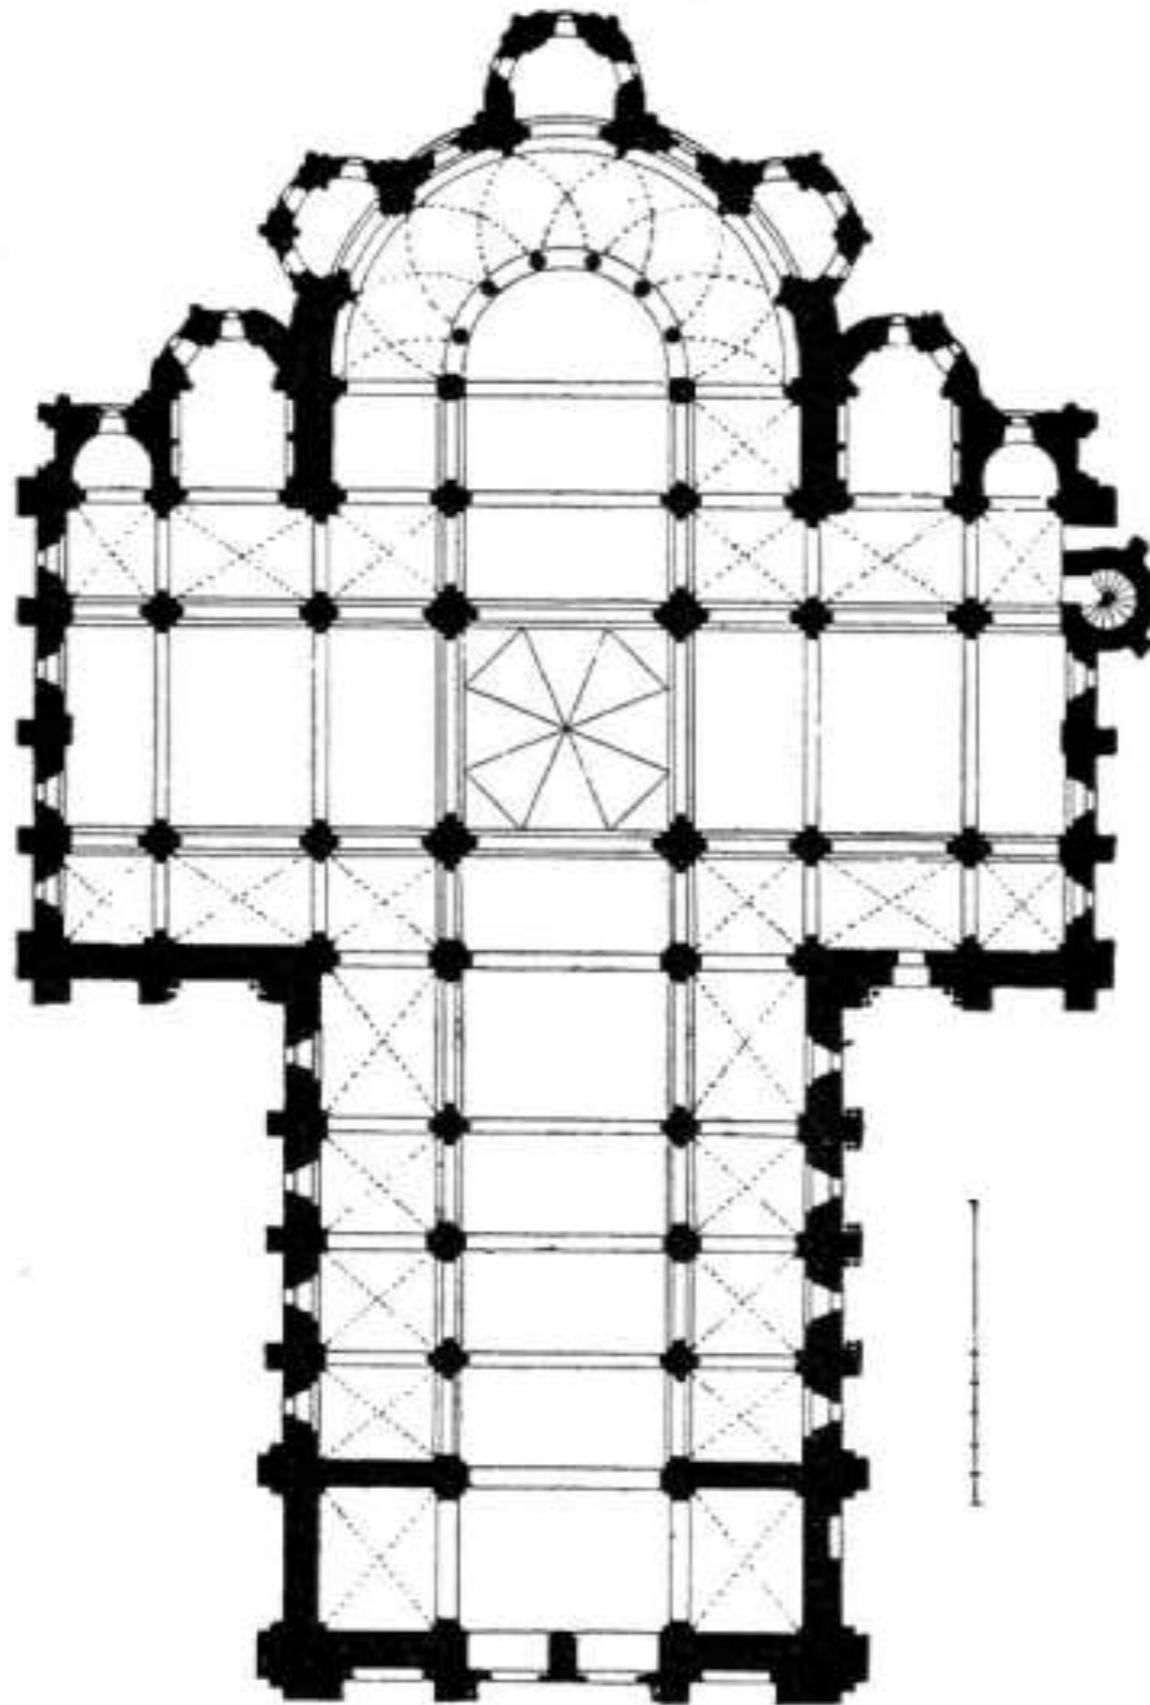

Gothic vs. Romanesque

"Pure" Gothic
High pointed arches and
spires, buttresses, gargoyles,
large colored windows

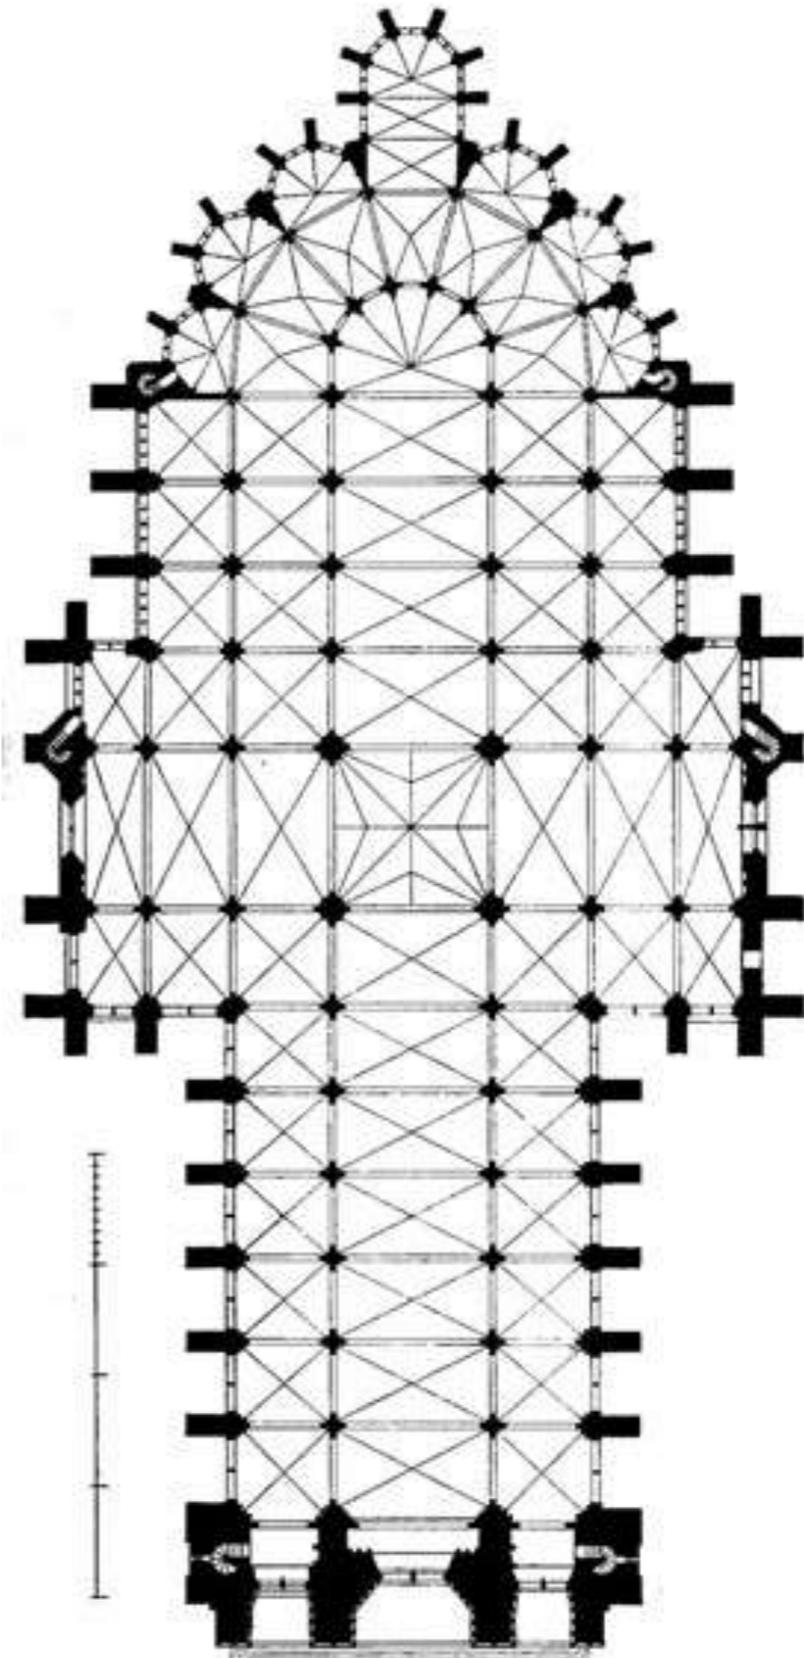

Romanesque Gothic
Thick supporting walls
with a few small windows
of clear glass, and
thick towers

Church facades: Gothic (left) and Romanesque Gothic (right)

Romanesque

Gothic

Church Parts

Review

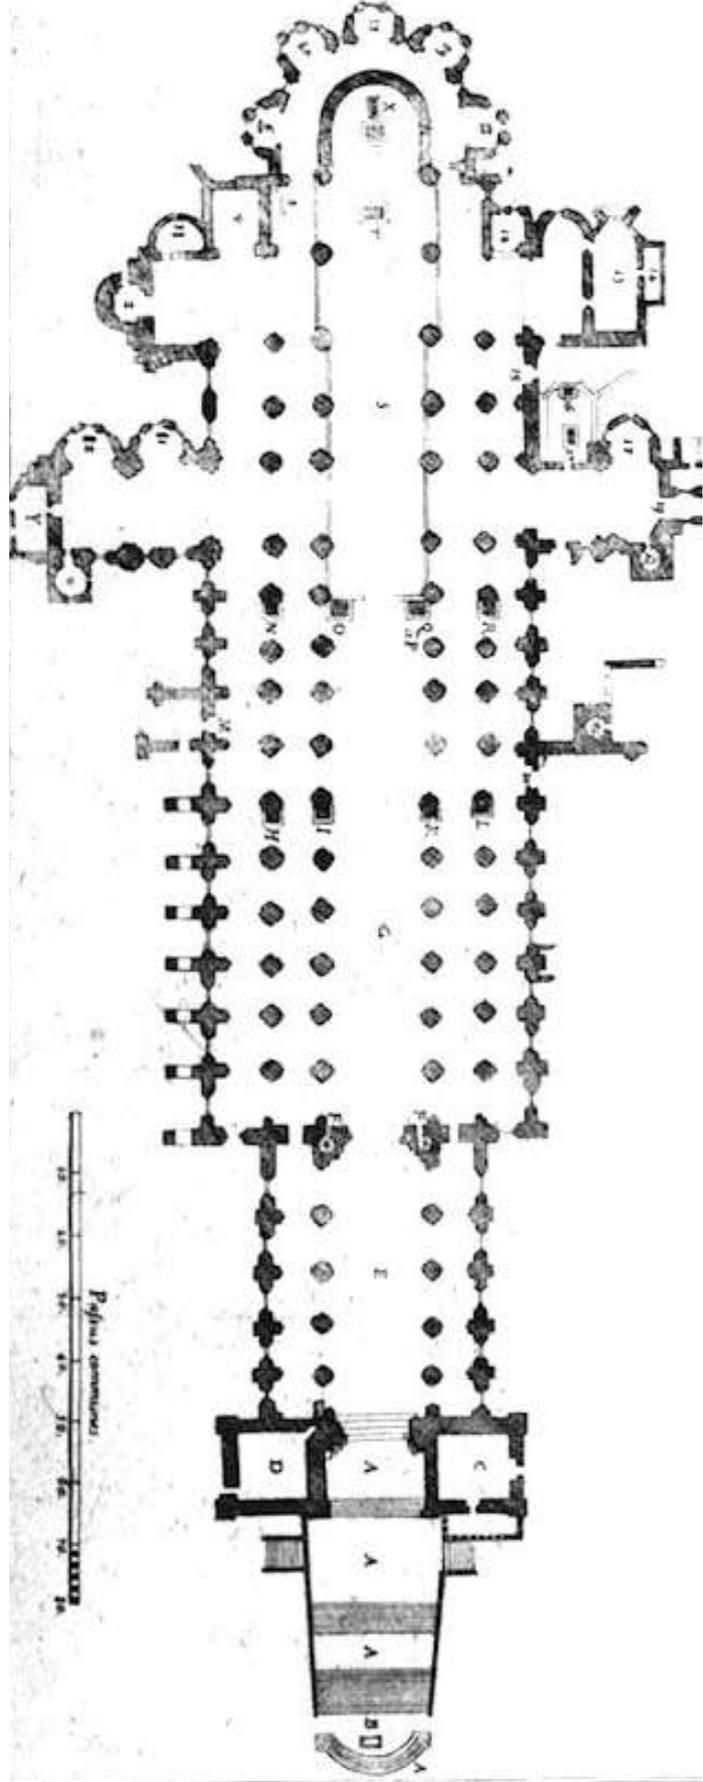

- | | | |
|------------|-------------|--------------------|
| 1. Narthex | 4. Transept | 7. Ambulatory |
| 2. Nave | 5. Crossing | 8. Apse |
| 3. Aisles | 6. Choir | 9. Apsidal chapels |

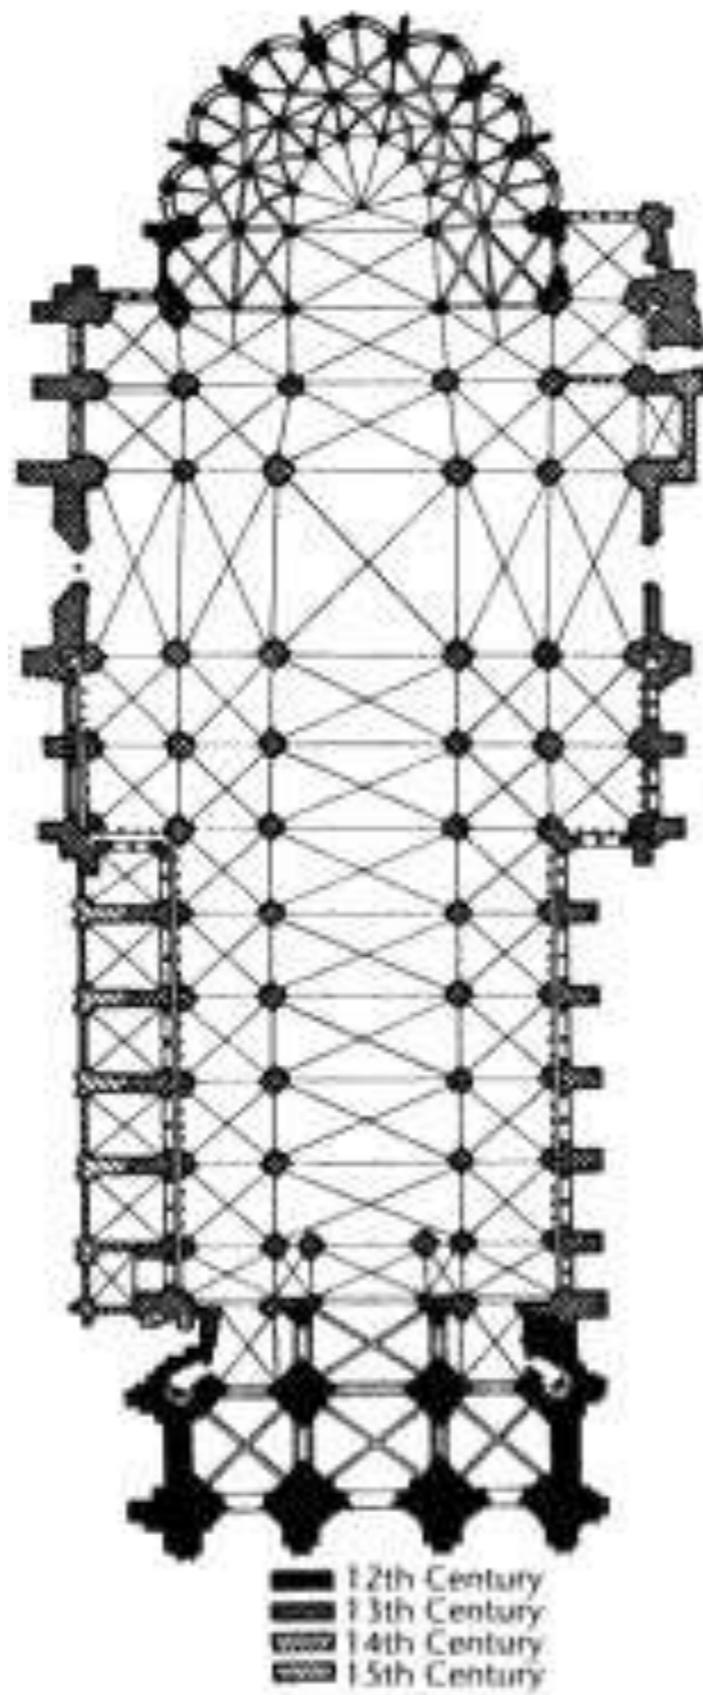

French Gothic

The new emphasis on **light** is what distinguished Gothic Architecture from the Romanesque

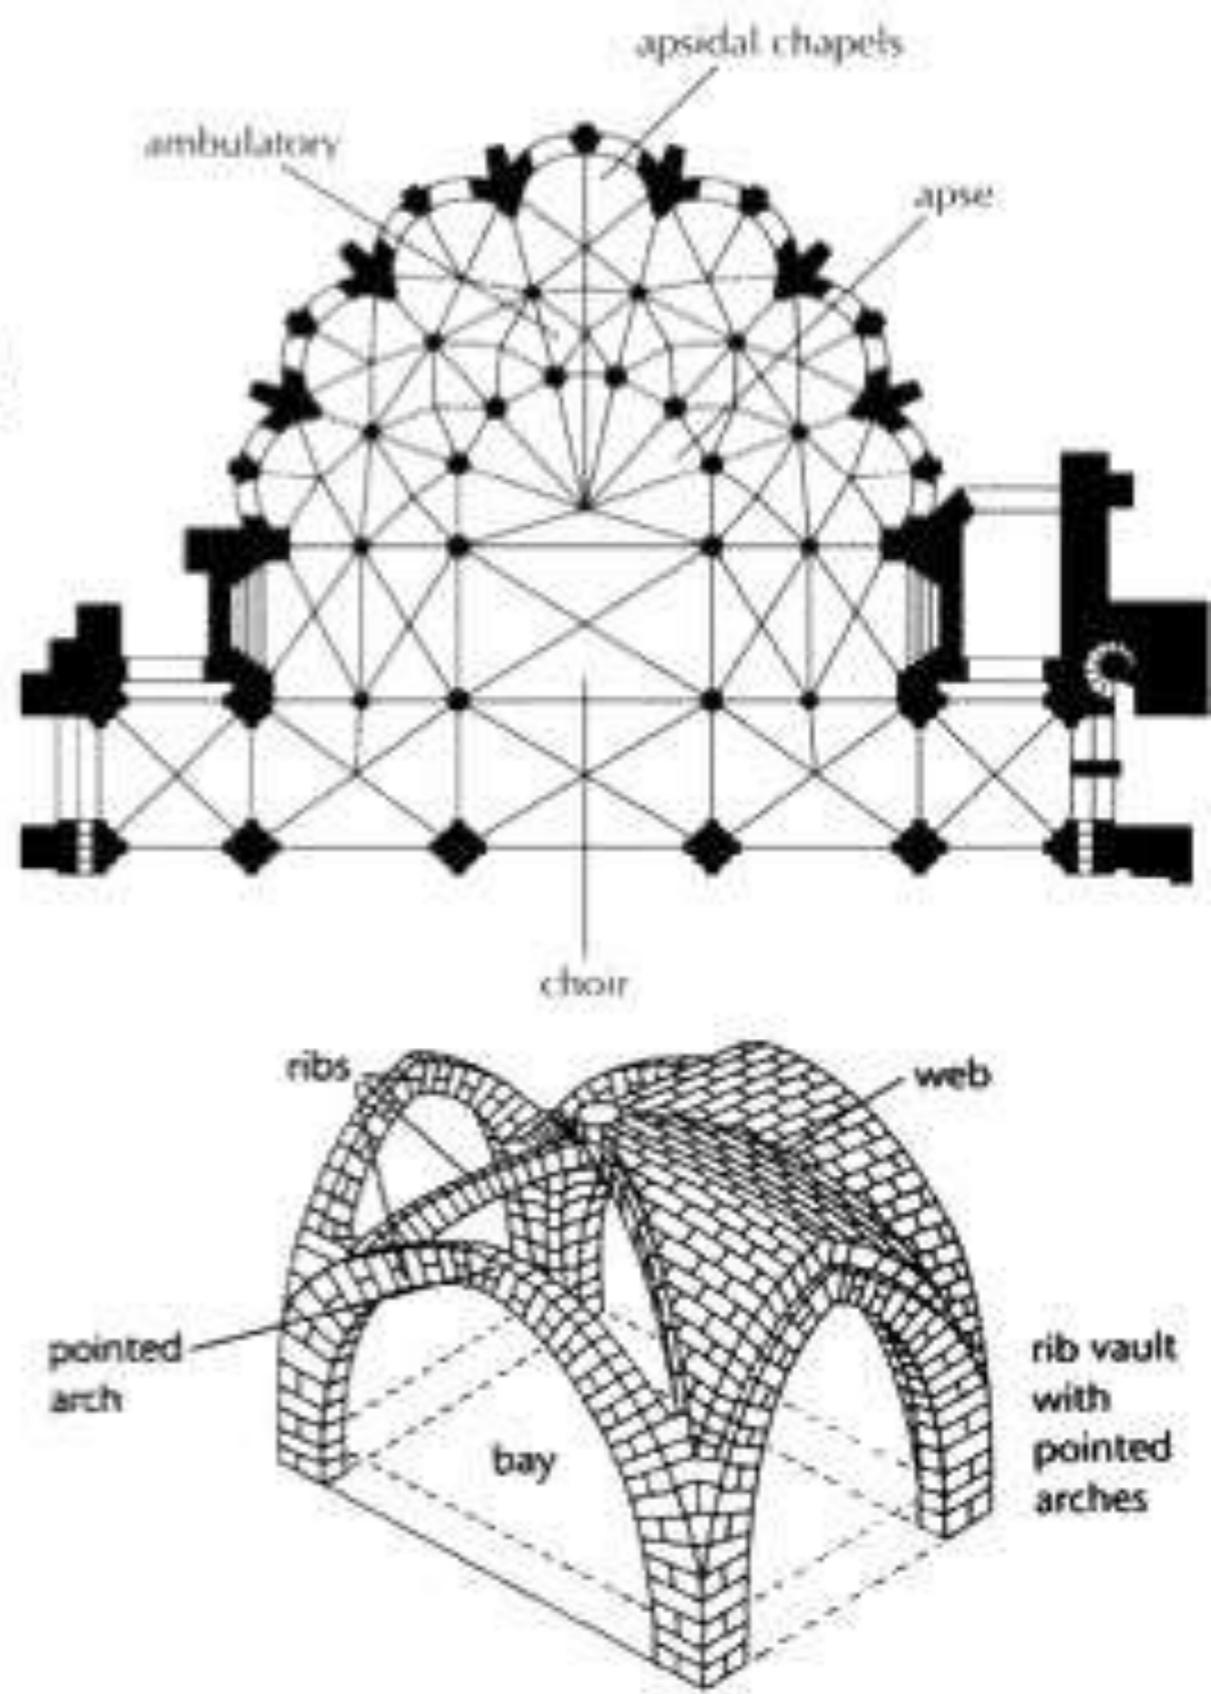

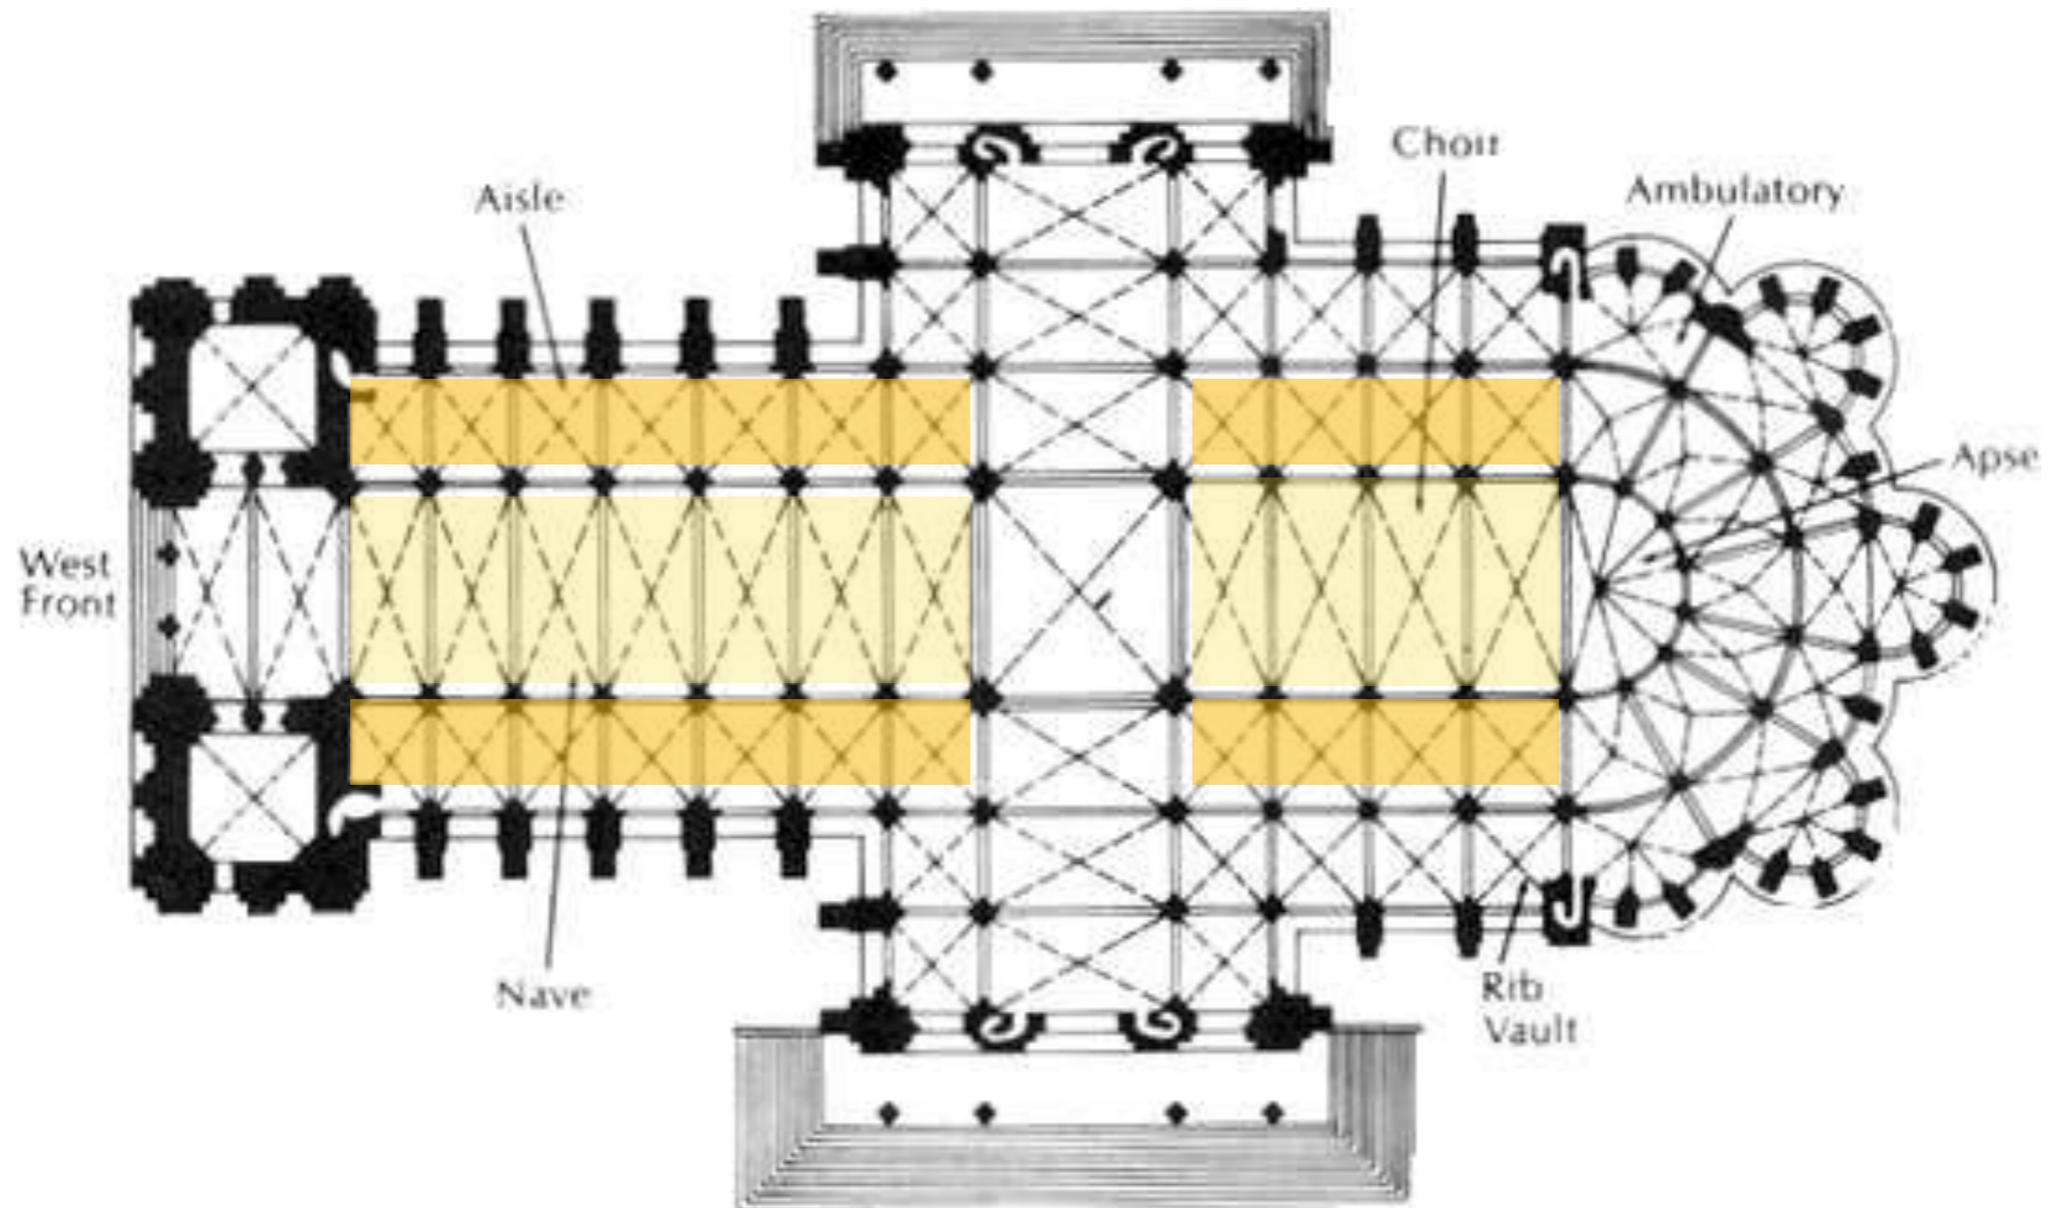

Cluny Abbey
Romanesque

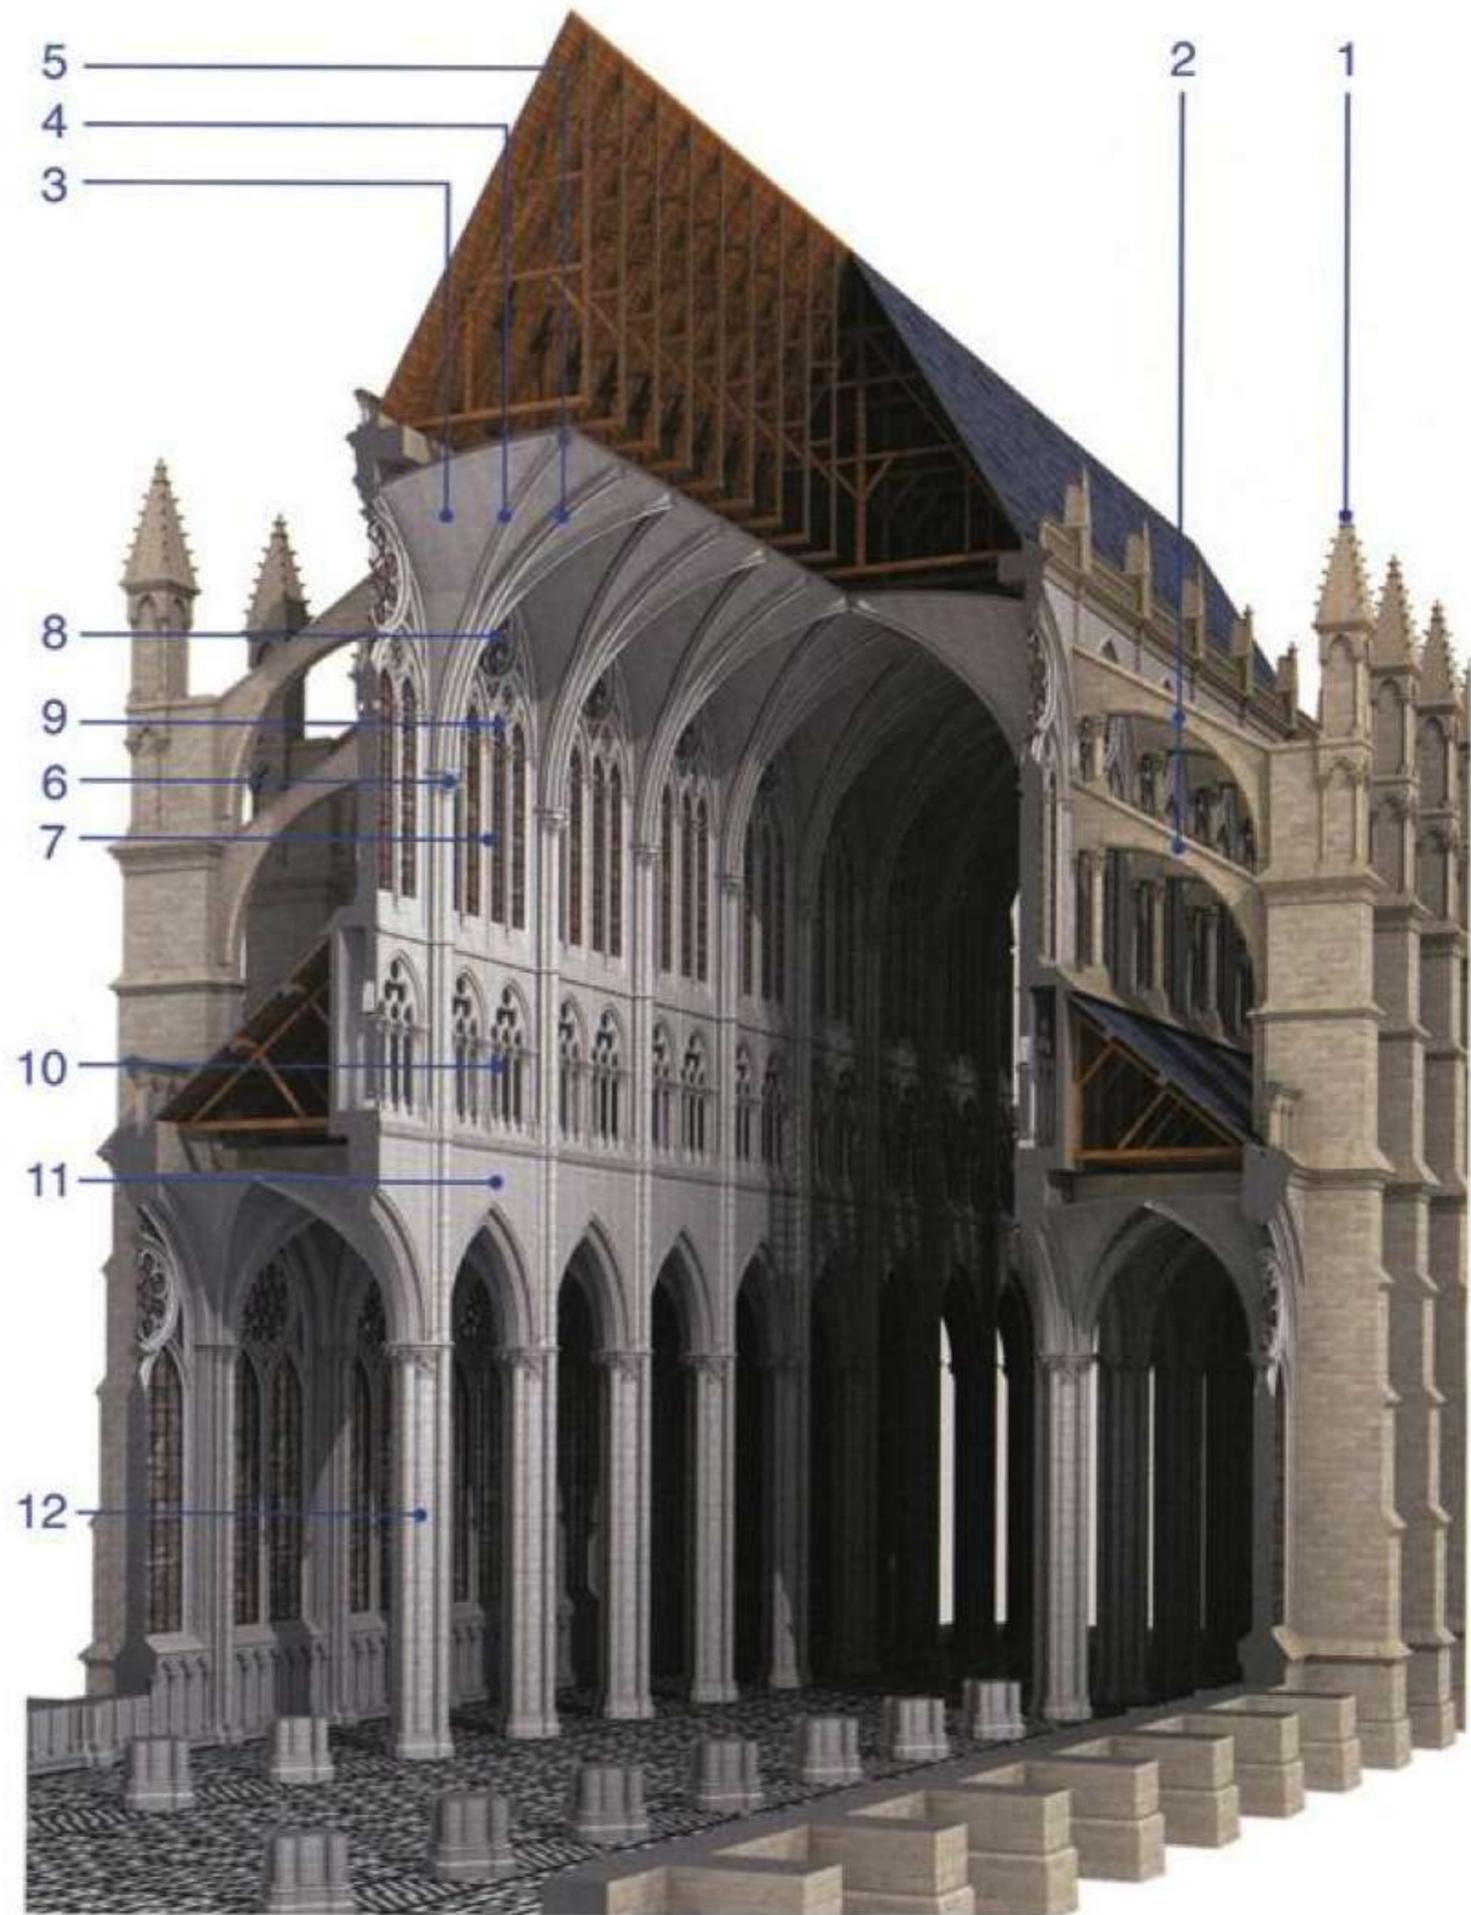

Basilica of St. Denis
Gothic

- The main change in the plan was the **choir**, became much larger
- Another change was in the creation of elaborated **entrances** not only at the west façade but also **at the end of each transept arm**
- Externally **flying buttresses** and tall vertical towers were visible

- 1) Pinnacle
- 2) Flying Buttress
- 3) Vaulting Web
- 4) Diagonal Rib
- 5) Transverse Rib
- 6) Springing
- 7) Clerestory
- 8) Oculus
- 9) Lancet
- 10) Triforium
- 11) Nave Arcade
- 12) Compound Pier with responds

French Gothic

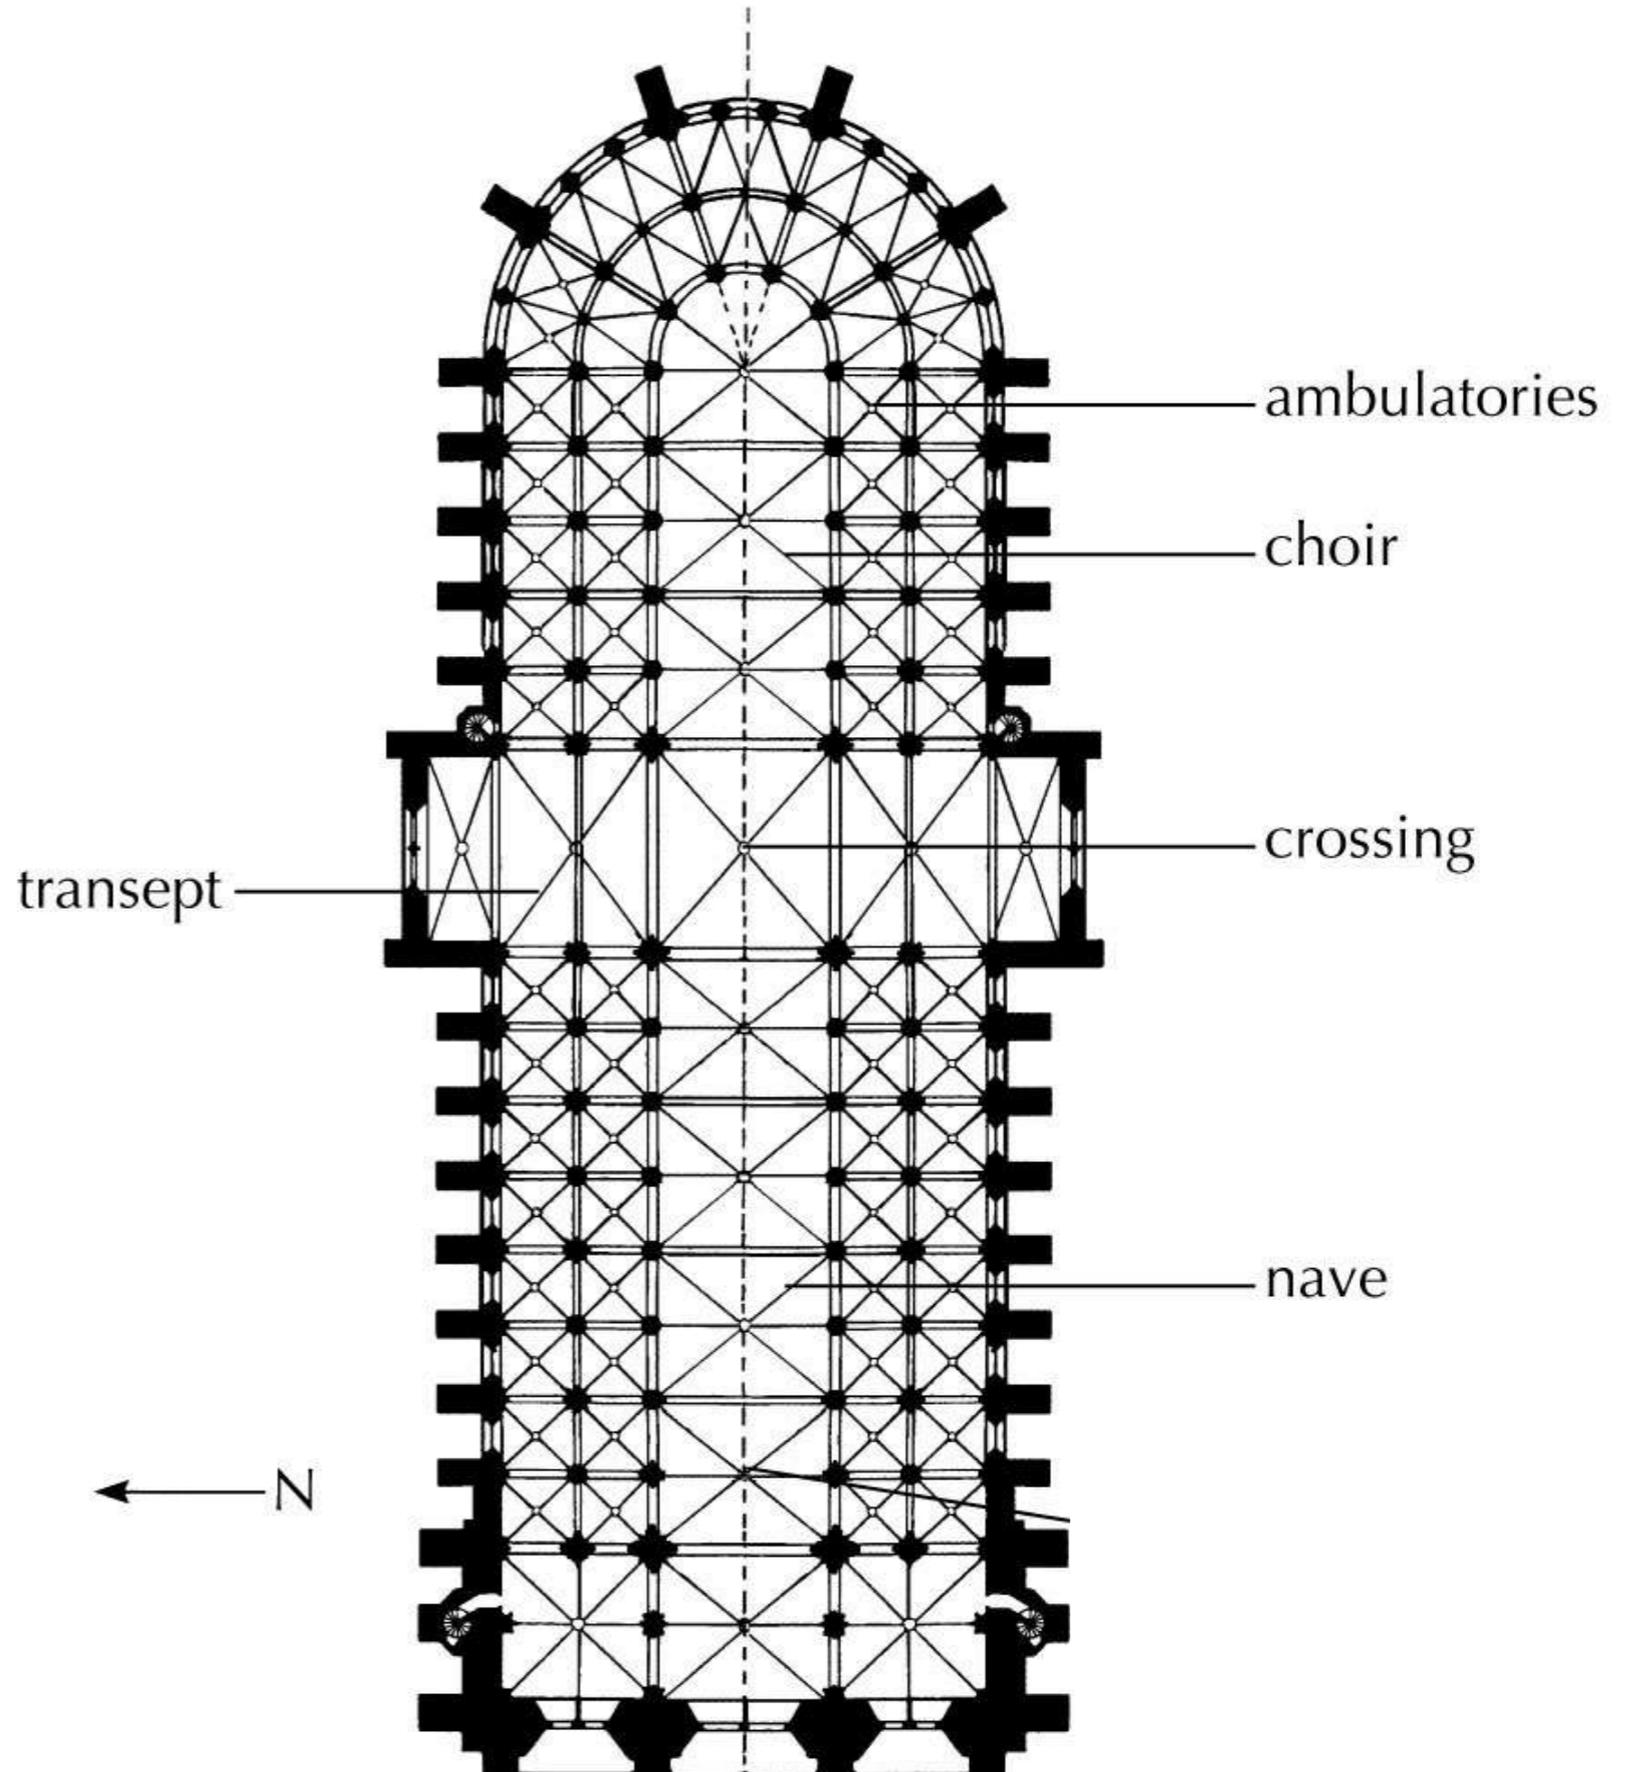

Cathedrals

Notre Dame Paris (1163-1214)

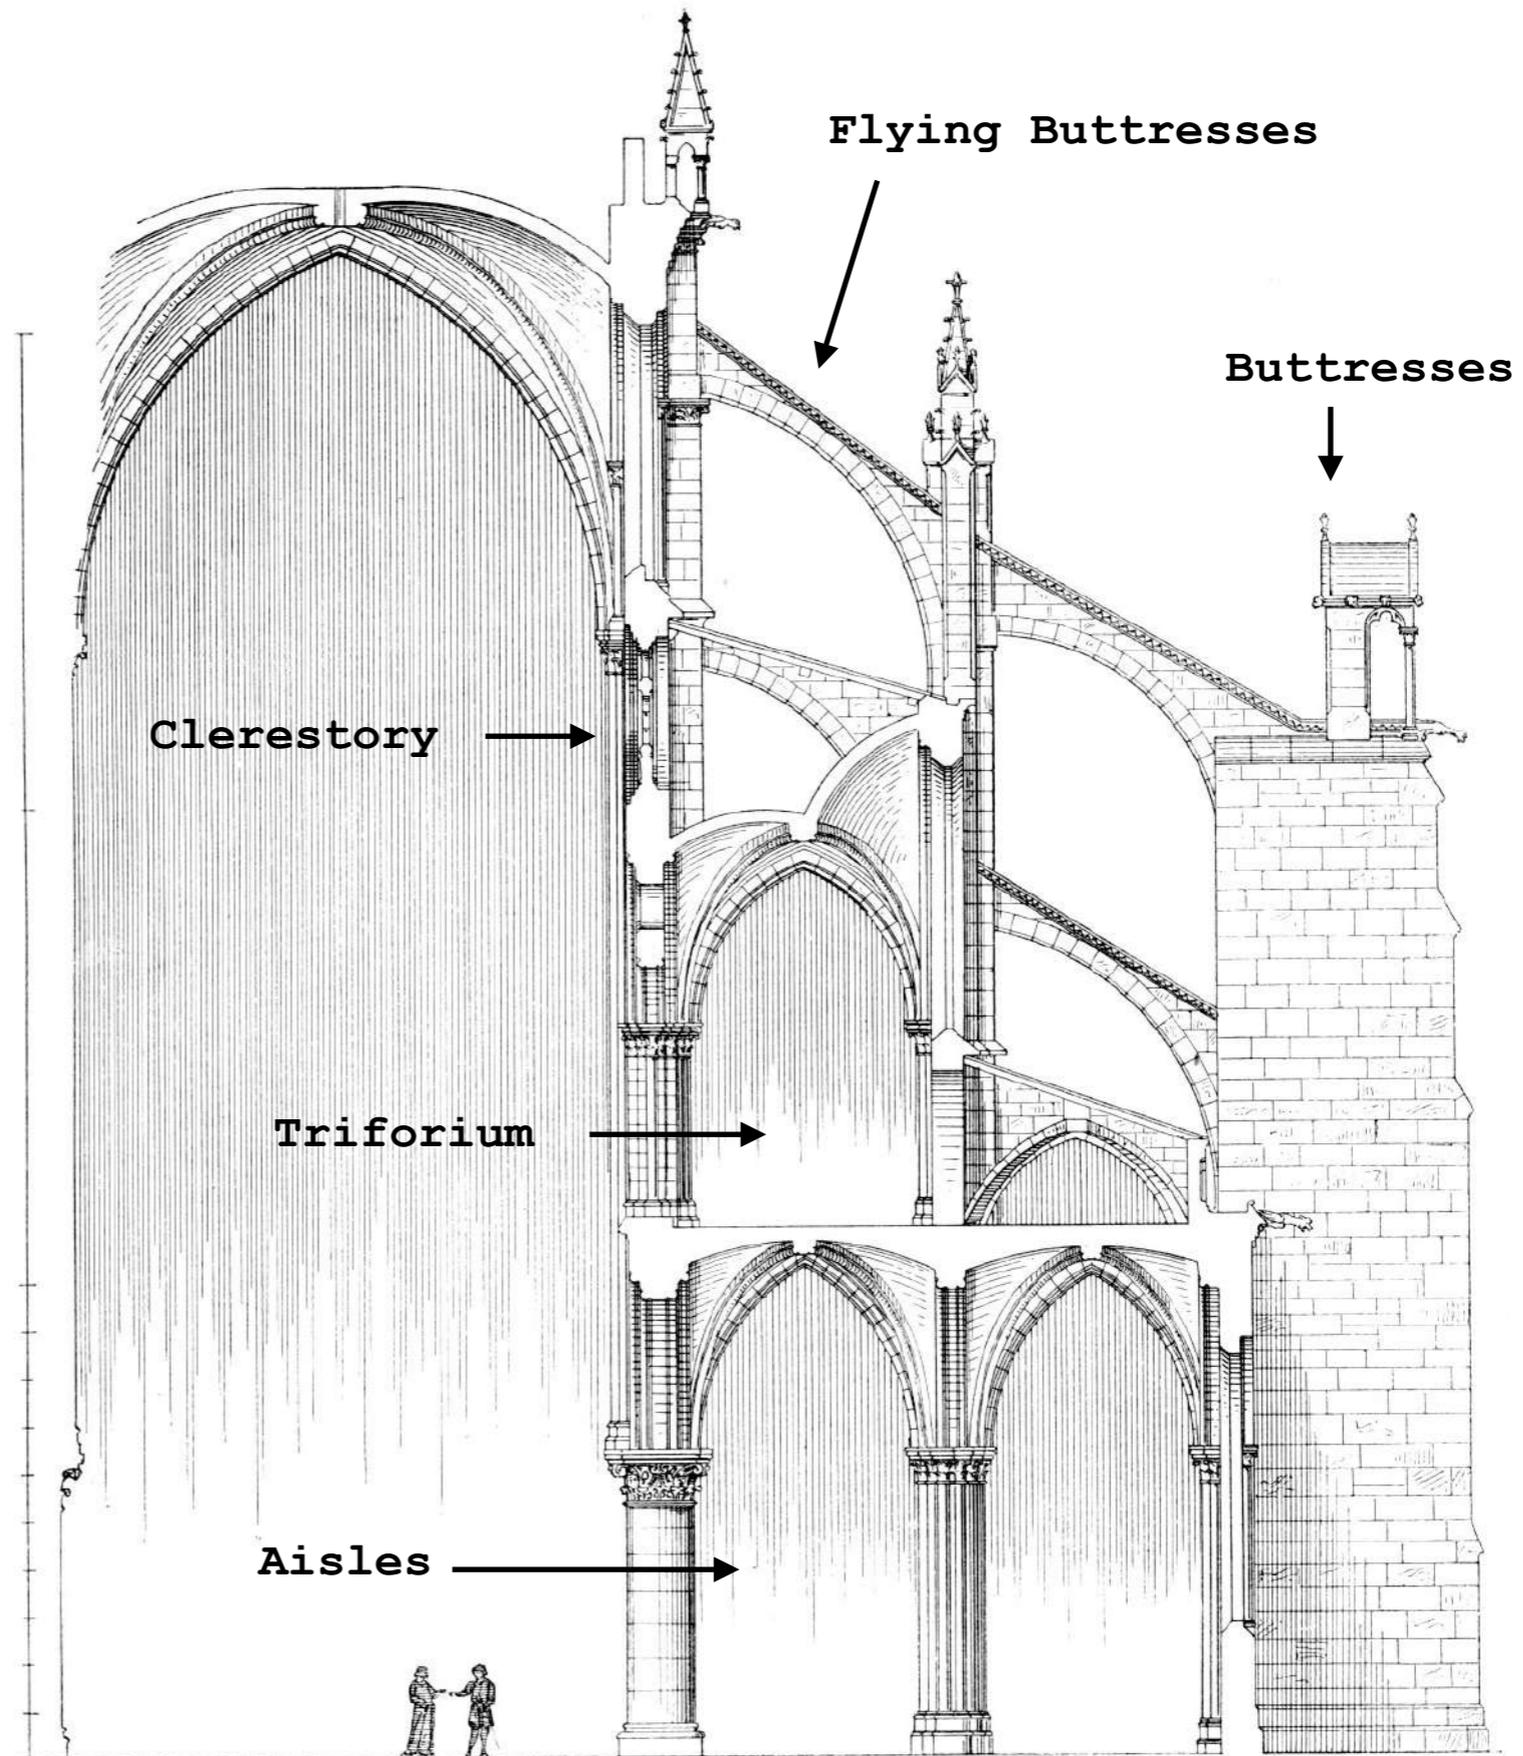

Notre Dame Paris (1163-1214)

- Typical plan with wide central nave and double aisles
- Transept with small projection
- **Chevet** arrangement with its double aisles (ambulatories)
- First use of flying buttresses

Notre Dame Paris (1163-1214)

Notre Dame Paris (1163-1214)

The west facade shows characteristics of Gothic Architecture:

- Three recessed portals
- Statues in niches
- Circular wheel window (rose window)

Beauvais

French Gothic
Late Gothic Cathedrals

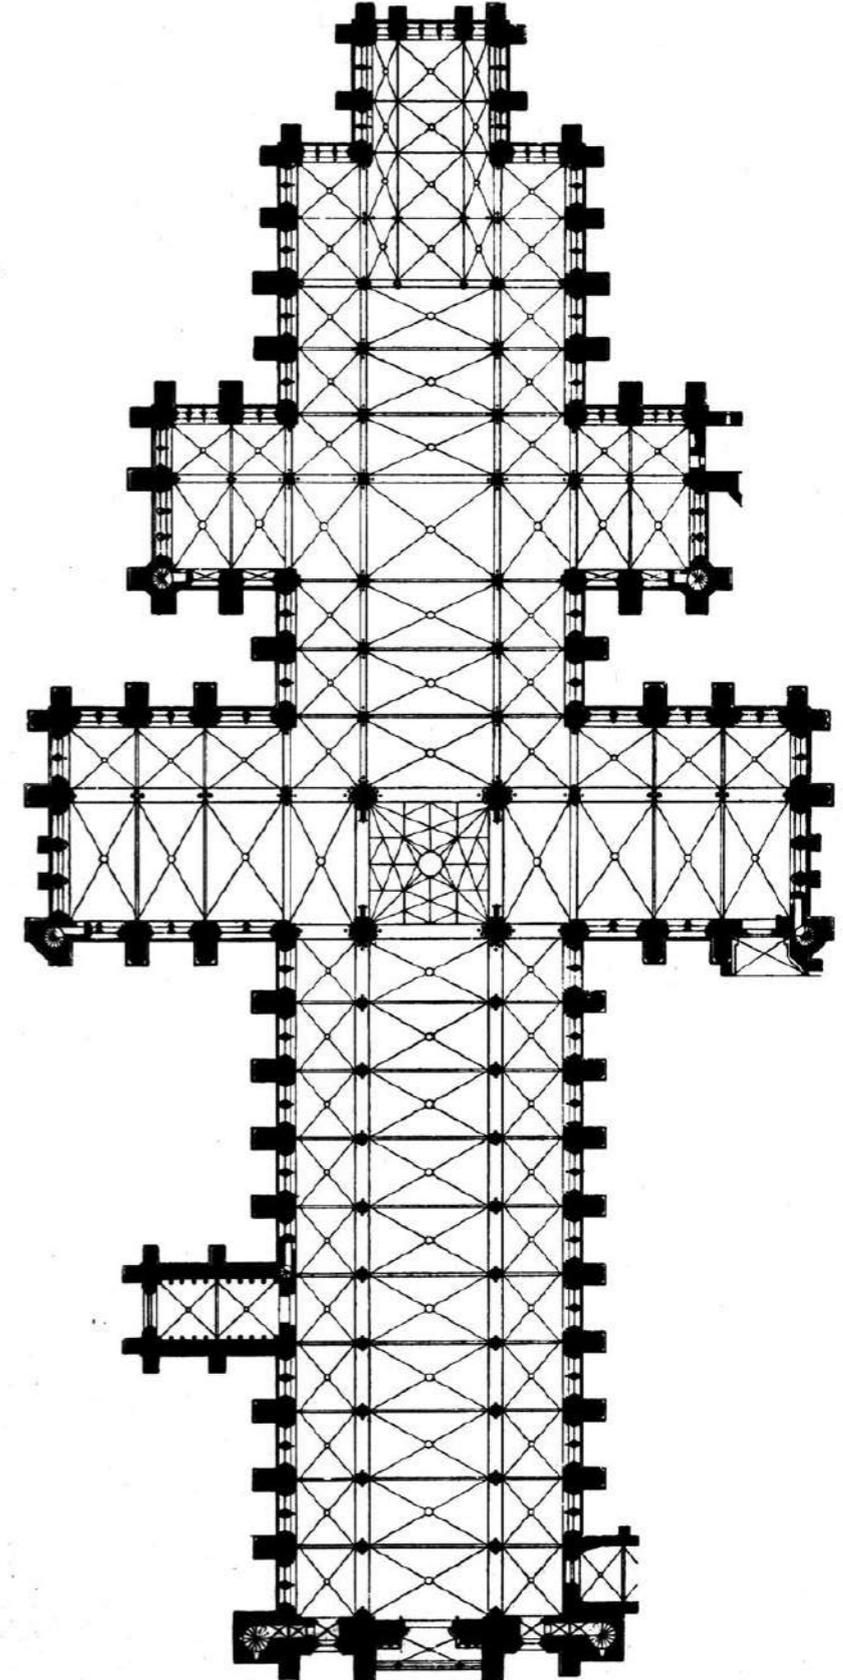

- In France, the embellishment of the architecture resulted in decorative forms, especially in the stone tracery of stain glass windows
- The tracery had wavy fluidity like fire (**Flamboyant gothic**)

English Gothic

Unlike French vertical Cathedrals, the English cathedrals had:

1. lateral extension of the cathedrals
2. Keeping the vertical dimensions much lower than they were in France
3. Stressing the horizontal moulding and string - courses of masonry that marked the edge of the three horizontal divisions in interior (arcade, triforium, clearstory)
4. Cathedrals main tower was at the crossing
5. The cathedrals had two transepts
6. The churches had flat east ends instead of a curved chevet
7. Ceilings had a large degree of decoration and fantasy

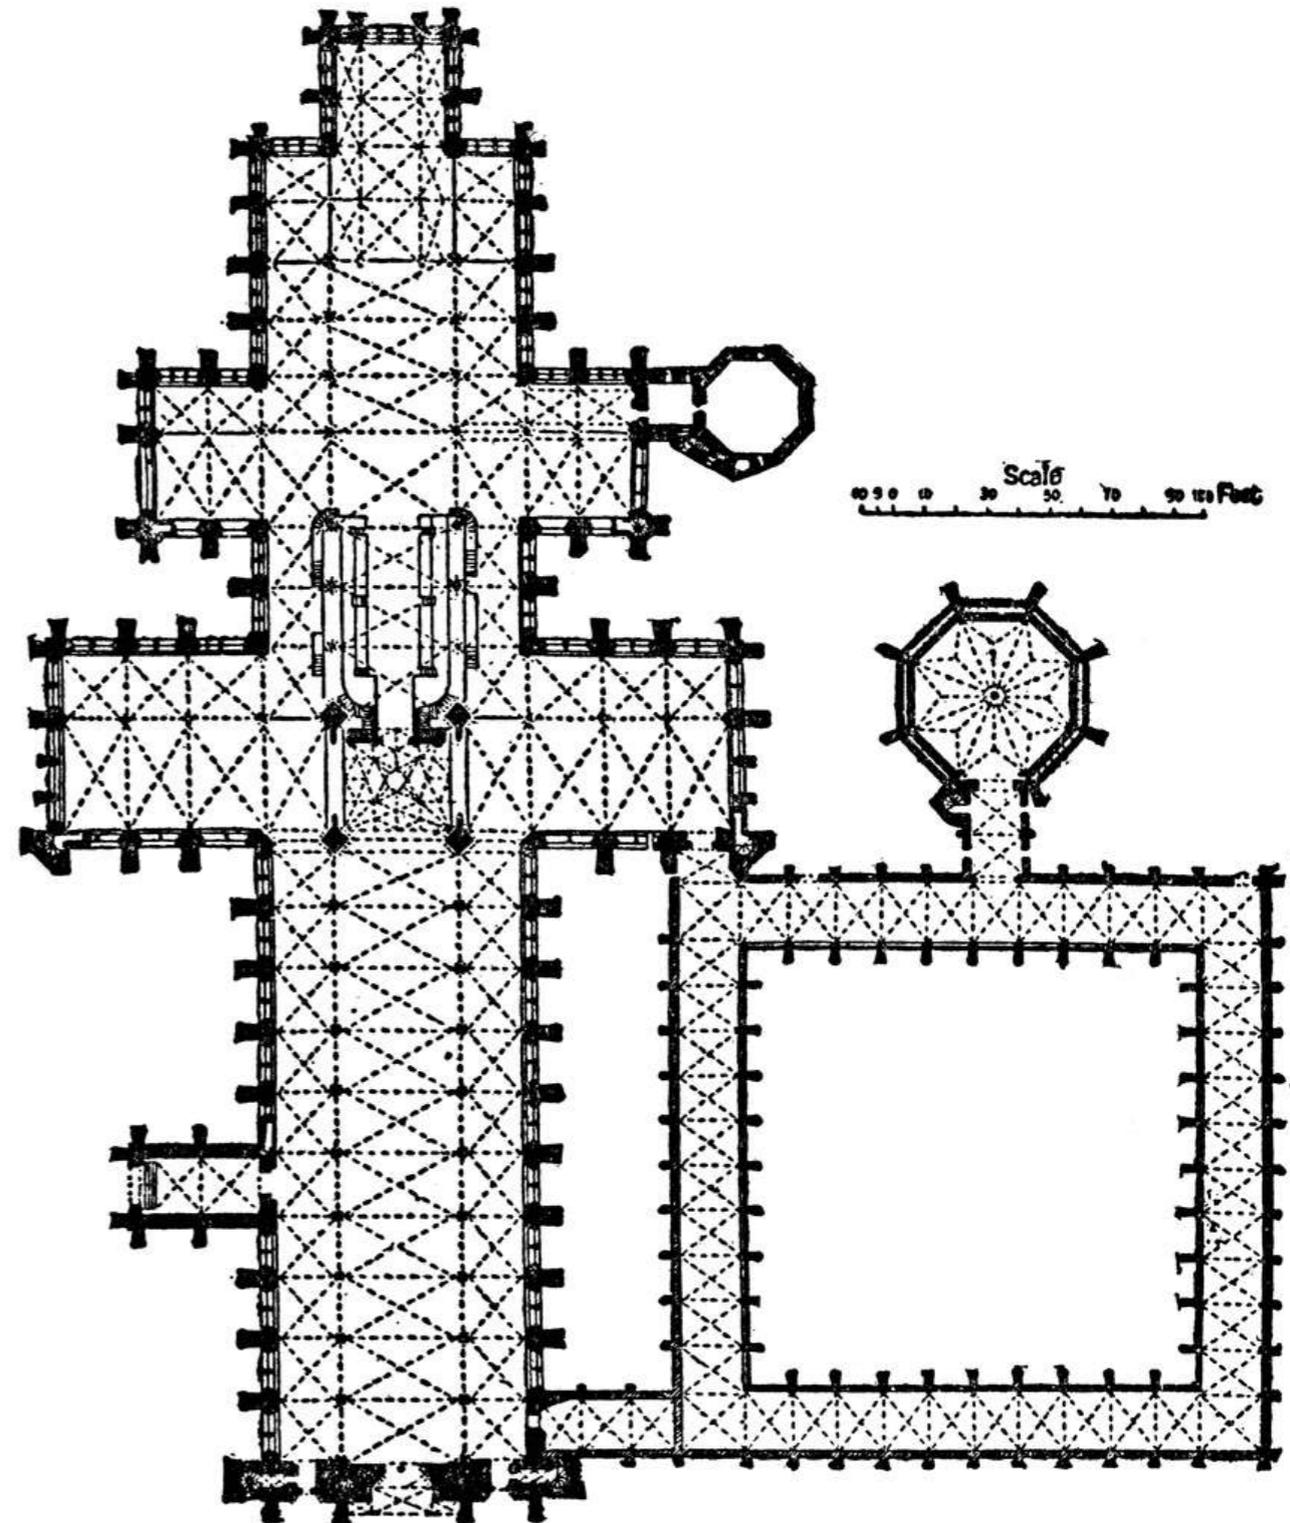

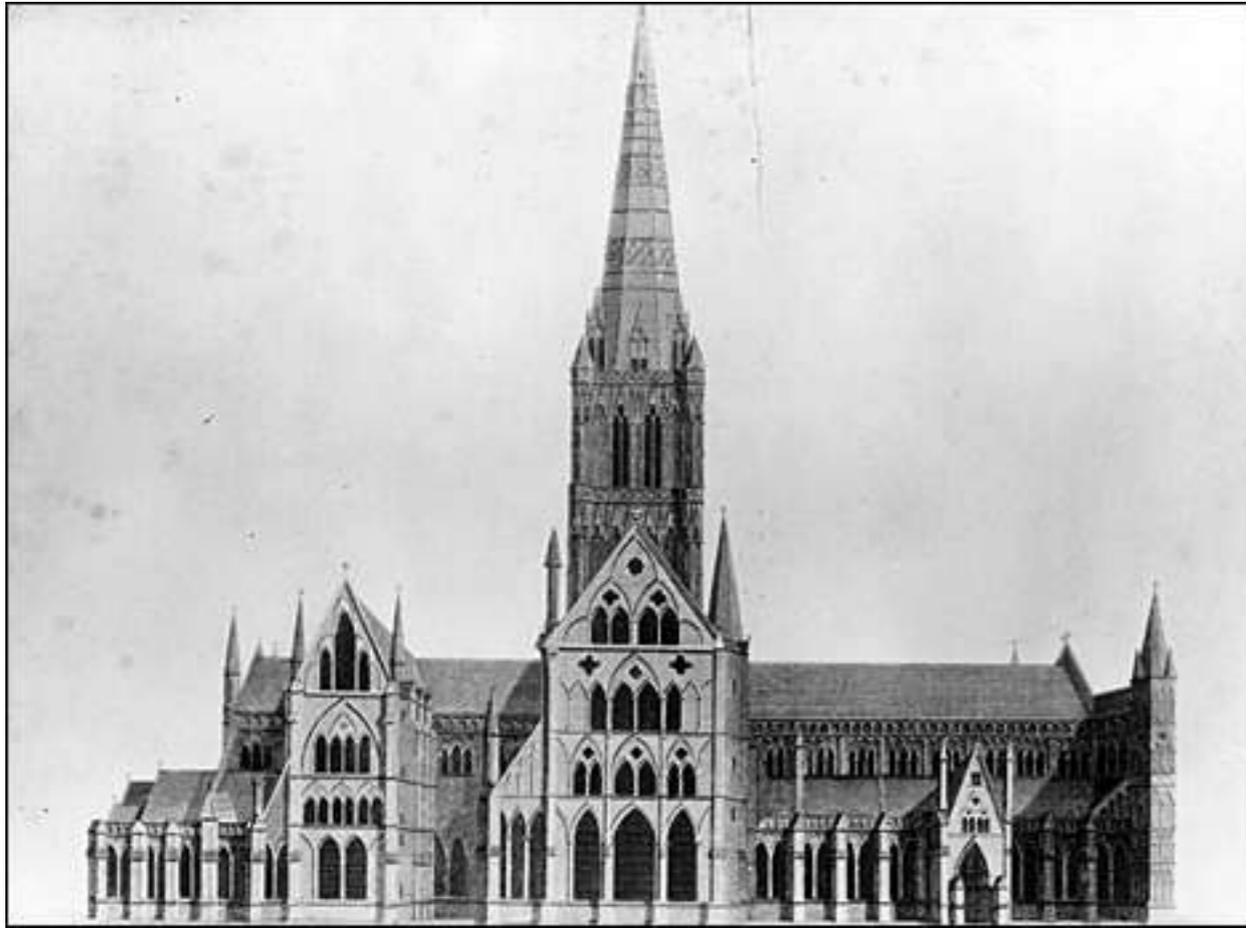

Salisbury Cathedral

Salisbury Cathedral

- Classic example of English gothic
- Central tower
- Horizontal moulding create a lateral emphasis (The facade emphasizes horizontality by horizontal bands of decoration)

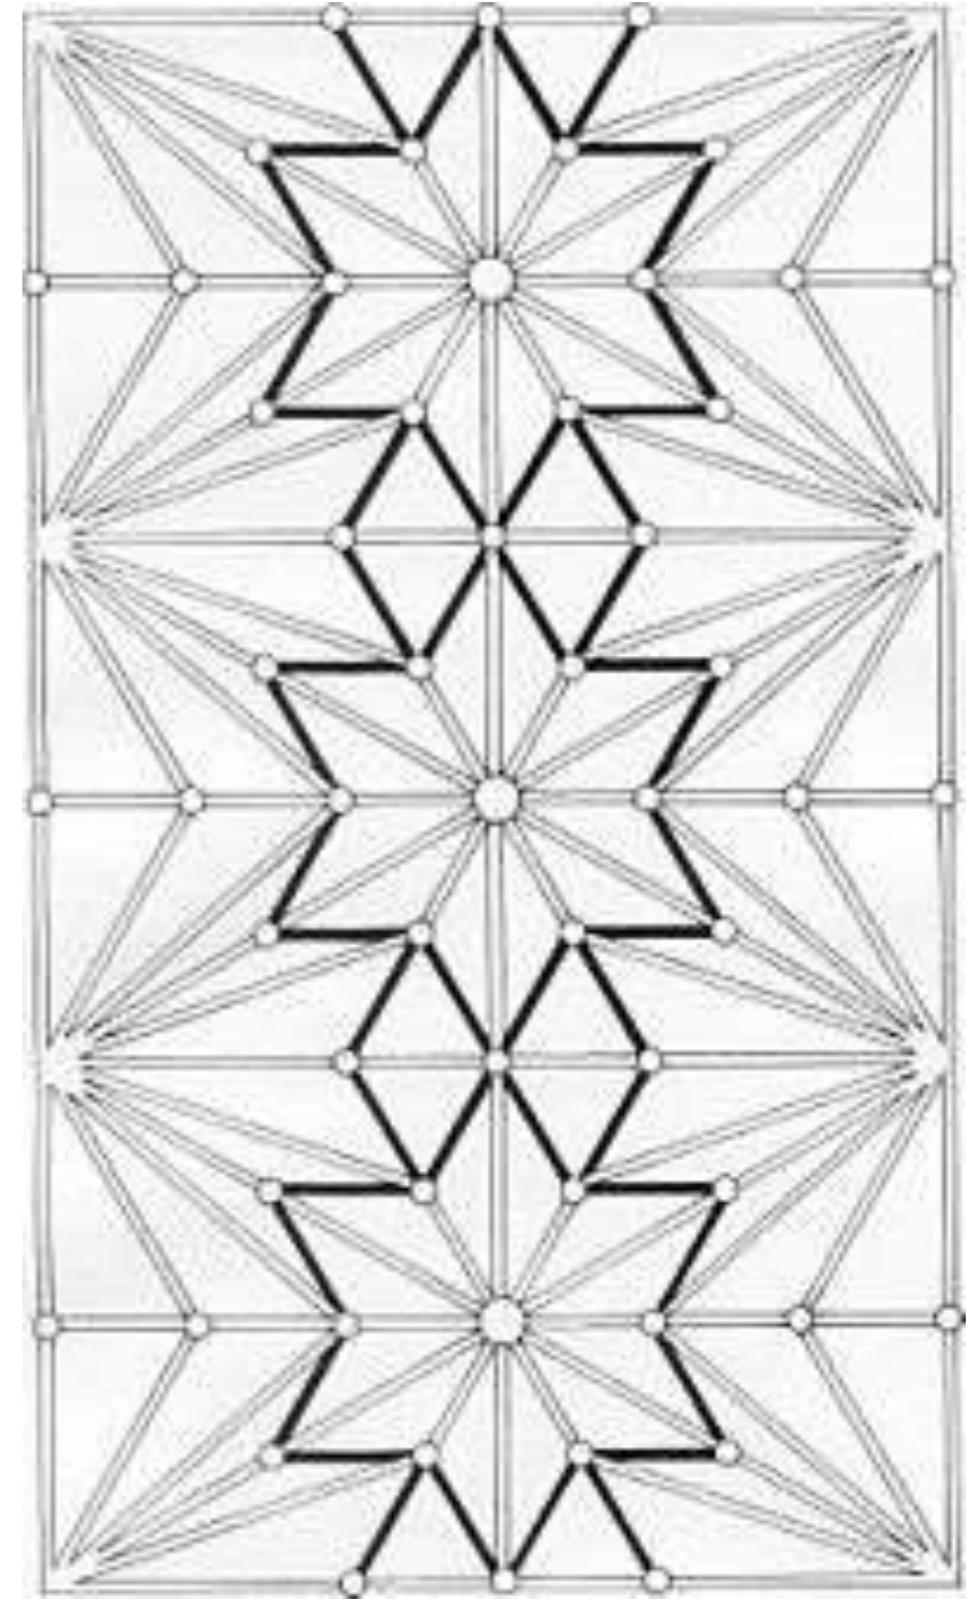

Salisbury Cathedral

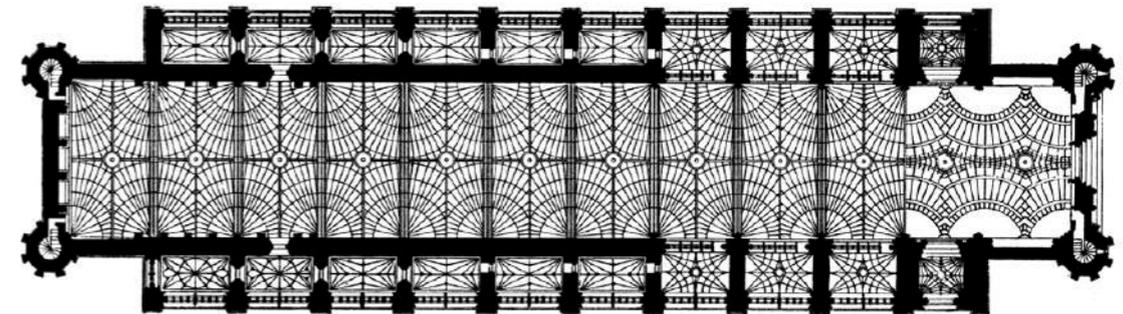

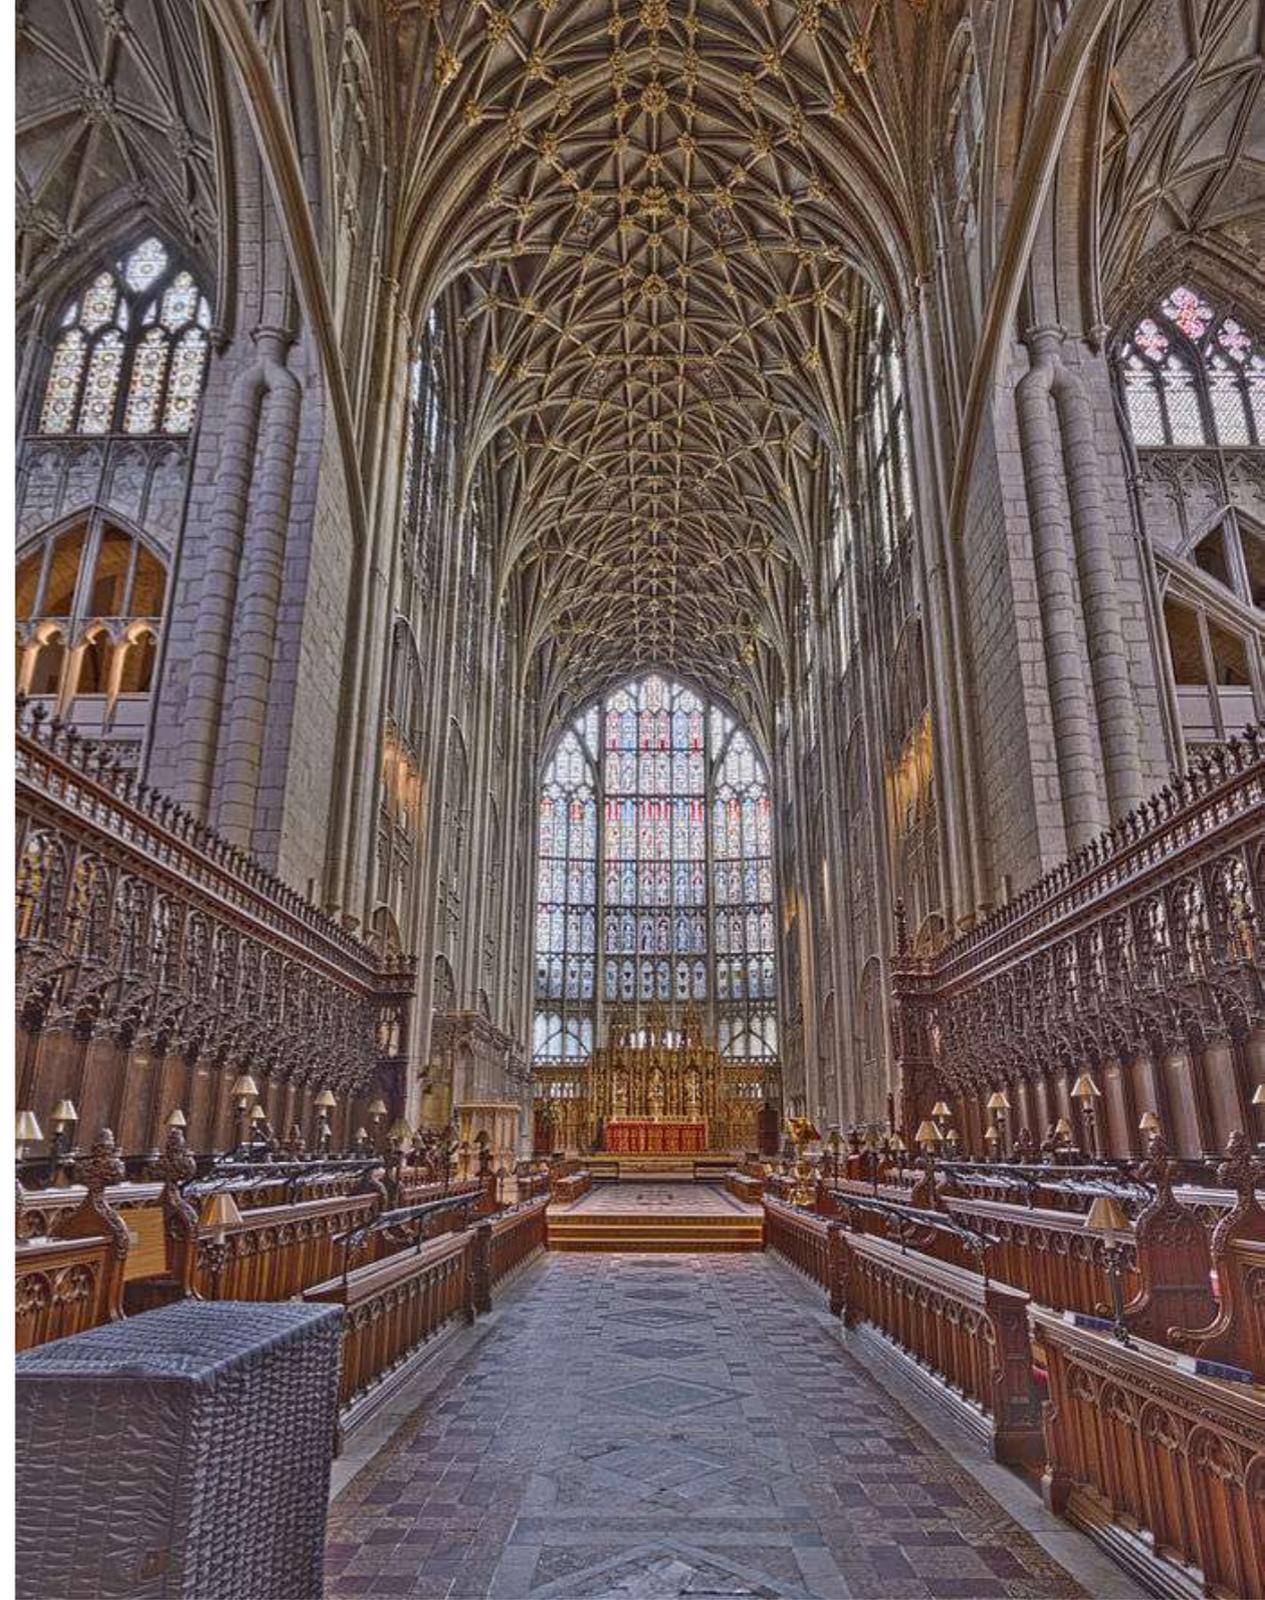

English Gothic
Late Gothic Cathedrals

- **Lierne vaulting** where the rib vaults are multiplied to become an overlay of decoration

- Another style that was found in late England was the **fan vaulting** where a dense cluster of **non-structural thin ribs** radiate out from each column from each column

CAMBRIDGE: KINGS COLLEGE CHAPEL.
