## **Acknowledgement:**

This lecture is based on, but not limited to, chapter 3 in “Discrete Mathematics with Applications by Susanna S. Epp (3<sup>rd</sup> Edition)”.

# In this Lecture

## We will learn

- **Part 1: What is a predicate, and Predicate Logic**
- Part 2: Universal and Existential Quantifiers:  $\forall$ ,  $\exists$
- Part 3: Formalize and Verablize Statements;
- Part 4: Different Writings of Quantified Statements;
- Part 5: Tarski's World (Simple Example)

**Keywords:** Predicates, FOL, First Order Logic, Universal Quantifier, Existential Quantifier, Tarski's World.

# First Order Logic

is also called:

- The Logic of Quantified Statements
- Predicate Logic
- First--Order Predicate Calculus
- Lower Predicate Calculus
- Quantification theory

# First Order Logic

A **proposition** is basically a sentence that has a truth value that can either be true or false, but it needs to be assigned any of the two values and not be ambiguous. Propositional logic is used to analyze a statement or group of statements.

**Predicates** can be seen as properties or additional information to express the subject of the sentence.

A quantified predicate is a proposition, that is, when you assign values to a predicate with variables it can be made a proposition.

# What is First Order Logic?

## Propositional Logic

- Set of propositional symbols  
(e.g., Ahmed, Student,  $P$ ,  $Q$ )  
- No binding of variables  
(joined together by logical operators to form sentences)

$\neg P$  Negation  
 $P \wedge Q$  Conjunction  
 $P \vee Q$  Disjunction  
 $P \rightarrow Q$  Implication  
 $P \leftrightarrow Q$  Equivalence

We regard the world as  
*Propositions*

## First Order Logic

$P(x..y)$ ,  $Q(t,..s)$  Predicates  
(Allows quantification over variables)

$\neg P$  Negation  
 $P \wedge Q$  Conjunction  
 $P \vee Q$  Disjunction  
 $P \rightarrow Q$  Implication  
 $P \leftrightarrow Q$  Equivalence

$\forall$  Universal quantification  
 $\exists$  Existential quantification

We regard the world as  
*Quantified Predicates*

# What is Predicate?

## • Definition

A **predicate** is a sentence that contains a finite number of variables and becomes a statement when specific values are substituted for the variables. The **domain** of a predicate variable is the set of all values that may be substituted in place of the variable.

---

$$P(x_1, x_2, \dots, x_n)$$

## Examples

Person(Amjad)

University(BZU)

StudyAt(Amjad, BZU)

# Arity of Predicates

Arity is the number of arguments or operands taken by a function or relation in logic, mathematics, and computer science

## Examples:

### Unary Predicates:

Person(Amjad),  
University(BZU)

### Binary Predicates:

StudyAt(Amjad, BZU)

### Ternary Predicates

StudyAt(Amjad, BZU, CS)

### Quaternary Predicate:

StudyAt(Amjad, BZU, CS, 2015)

### n-ary Predicate:

StudyAt(Amjad, BZU, CS, 2015, BA, ....)

# Truth of Predicates

## • Definition

If  $P(x)$  is a predicate and  $x$  has domain  $D$ , the **truth set** of  $P(x)$  is the set of all elements of  $D$  that make  $P(x)$  true when they are substituted for  $x$ . The truth set of  $P(x)$  is denoted

$$\{x \in D \mid P(x)\}.$$

$$\{x \in \mathbf{Organization} \mid \mathbf{University}(x)\}$$

The set of all organizations that are universities.

$$\{x \in \mathbf{Person} \mid \mathbf{student}(x)\}$$

The set of all persons that are students.

# In this Lecture

## We will learn

- Part 1: What is a predicate, and Predicate Logic
- **Part 2: Universal and Existential Quantifiers:  $\forall$ ,  $\exists$**
- Part 3: Formalize and Verablize Statements;
- Part 4: Different Writings of Quantified Statements;
- Part 5: Tarski's World (Simple Example)

# The Universal Quantifier: $\forall$

## • Definition

Let  $Q(x)$  be a predicate and  $D$  the domain of  $x$ . A **universal statement** is a statement of the form “ $\forall x \in D, Q(x)$ .” It is defined to be true if, and only if,  $Q(x)$  is true for every  $x$  in  $D$ . It is defined to be false if, and only if,  $Q(x)$  is false for at least one  $x$  in  $D$ . A value for  $x$  for which  $Q(x)$  is false is called a **counterexample** to the universal statement.

$\forall P \in \text{Palestinian} . \text{Likes}(p, \text{Zatar})$

$\forall x \in \mathbf{R}, x^2 \geq x.$

Let  $D = \{1, 2, 3, 4, 5\}$ .  $\forall x \in D, x^2 \geq x.$

# The Existential Quantifier: $\exists$

## • Definition

Let  $Q(x)$  be a predicate and  $D$  the domain of  $x$ . An **existential statement** is a statement of the form “ $\exists x \in D$  such that  $Q(x)$ .” It is defined to be true if, and only if,  $Q(x)$  is true for at least one  $x$  in  $D$ . It is false if, and only if,  $Q(x)$  is false for all  $x$  in  $D$ .

$\exists p \in \text{Person} . \text{Likes}(p, \text{Zatar})$

$\exists m \in \mathbf{Z}^+$  such that  $m^2 = m$ .

Let  $E = \{5, 6, 7, 8\}$      $\exists m \in E$  such that  $m^2 = m$ .

# In this Lecture

## We will learn

- Part 1: What is a predicate, and Predicate Logic
- Part 2: Universal and Existential Quantifiers:  $\forall$ ,  $\exists$
- **Part 3: Formalize and Verablize Statements;**
- Part 4: Different Writings of Quantified Statements;
- Part 5: Tarski's World (Simple Example)

# Verbalizing Formal Statements

Write the following formal statements in an informal language:

$$\forall x \in \mathbf{R}, x^2 \geq 0.$$

$$\forall x \in \mathbf{R}, x^2 \neq -1.$$

$$\exists m \in \mathbf{Z}^+ \text{ such that } m^2 = m.$$

$$\forall x \in \mathbf{R}, \text{ if } x > 2 \text{ then } x^2 > 4.$$

# Verbalizing Formal Statements

Write the following formal statements in an informal language:

$$\forall x \in \mathbf{R}, x^2 \geq 0.$$

All real numbers have non-negative squared value

OR Every real number has a non-negative squared value

OR The square of any real number has a non-negative value

$$\forall x \in \mathbf{R}, x^2 \neq -1.$$

$$\exists m \in \mathbf{Z}^+ \text{ such that } m^2 = m.$$

$$\forall x \in \mathbf{R}, \text{ if } x > 2 \text{ then } x^2 > 4.$$

# Verbalizing Formal Statements

Write the following formal statements in an informal language:

$$\forall x \in \mathbf{R}, x^2 \geq 0.$$

All real numbers have non-negative squared value

OR Every real number has a non-negative squared value

OR The square of any real number has a non-negative value

$$\forall x \in \mathbf{R}, x^2 \neq -1.$$

All real numbers have squares that are not equal to -1

OR No real value has a square equals to -1

$$\exists m \in \mathbf{Z}^+ \text{ such that } m^2 = m.$$

$$\forall x \in \mathbf{R}, \text{ if } x > 2 \text{ then } x^2 > 4.$$

# Verbalizing Formal Statements

Write the following formal statements in an informal language:

$$\forall x \in \mathbf{R}, x^2 \geq 0.$$

All real numbers have non-negative squared value

OR Every real number has a non-negative squared value

OR The square of any real number has a non-negative value

$$\forall x \in \mathbf{R}, x^2 \neq -1.$$

All real numbers have squares that are not equal to -1

OR No real value has a square equals to -1

$$\exists m \in \mathbf{Z}^+ \text{ such that } m^2 = m.$$

There is a positive integer whose square equals to itself

OR We can find at least one positive integer equal to its own

OR some positive integer equals to its own square

$$\forall x \in \mathbf{R}, \text{ if } x > 2 \text{ then } x^2 > 4.$$

# Verbalizing Formal Statements

**Write the following formal statements in an informal language:**

$$\forall x \in \mathbf{R}, x^2 \geq 0.$$

All real numbers have non-negative squared value

OR Every real number has a non-negative squared value

OR The square of any real number has a non-negative value

$$\forall x \in \mathbf{R}, x^2 \neq -1.$$

All real numbers have squares that are not equal to -1

OR No real value has a square equals to -1

$$\exists m \in \mathbf{Z}^+ \text{ such that } m^2 = m.$$

There is a positive integer whose square equals to itself

OR We can find at least one positive integer equal to its own

OR some positive integer equals to its own square

$$\forall x \in \mathbf{R}, \text{ if } x > 2 \text{ then } x^2 > 4.$$

If a real number is greater than 2 then its square is greater than 4

OR The square of any real number is greater than 4

OR the squares of all real numbers greater than 2 are greater than 4

# Formalize Statements

**Write the following informal statements in a formal language:**

All triangles have three sides

No dogs have wings

Some programs are structured

If a real number is an integer, then it is a rational number

All bytes have eight bits

No fire trucks are green

# Formalize Statements

**Write the following informal statements in a formal language:**

All triangles have three sides

*$\forall$  triangles  $t$ ,  $t$  has three sides*

*OR  $\forall t \in T$ ,  $t$  has three sides*

No dogs have wings

Some programs are structured

If a real number is an integer, then it is a rational number

All bytes have eight bits

No fire trucks are green

# Formalize Statements

**Write the following informal statements in a formal language:**

All triangles have three sides

*$\forall$  triangles  $t$ ,  $t$  has three sides*

*OR  $\forall t \in T$ ,  $t$  has three sides*

No dogs have wings

*$\forall$  dogs  $d$ ,  $d$  has no wings*

*OR  $\forall d \in D$ ,  $d$  does not have wings*

Some programs are structured

If a real number is an integer, then it is a rational number

All bytes have eight bits

No fire trucks are green

# Formalize Statements

**Write the following informal statements in a formal language:**

All triangles have three sides

*$\forall$  triangles  $t$ ,  $t$  has three sides*

*OR  $\forall t \in T$ ,  $t$  has three sides*

No dogs have wings

*$\forall$  dogs  $d$ ,  $d$  has no wings*

*OR  $\forall d \in D$ ,  $d$  does not have wings*

Some programs are structured

*$\exists$  a program  $p$  such that  $p$  is structured*

*OR  $\exists p \in P$  such that  $p$  is structured*

If a real number is an integer, then it is a rational number

All bytes have eight bits

No fire trucks are green

# Formalize Statements

Write the following informal statements in a formal language:

All triangles have three sides

*$\forall$  triangles  $t$ ,  $t$  has three sides*

*OR  $\forall t \in T$ ,  $t$  has three sides*

No dogs have wings

*$\forall$  dogs  $d$ ,  $d$  has no wings*

*OR  $\forall d \in D$ ,  $d$  does not have wings*

Some programs are structured

*$\exists$  a program  $p$  such that  $p$  is structured*

*OR  $\exists p \in P$  such that  $p$  is structured*

If a real number is an integer, then it is a rational number

*$\forall$  real numbers  $x$ , if  $x$  is an integer, then  $x$  is a rational number*

*OR  $\forall x \in R$ , if  $x \in Z$  then  $x \in Q$*

All bytes have eight bits

No fire trucks are green

# Formalize Statements

**Write the following informal statements in a formal language:**

All triangles have three sides

*$\forall$  triangles  $t$ ,  $t$  has three sides*

*OR  $\forall t \in T$ ,  $t$  has three sides*

No dogs have wings

*$\forall$  dogs  $d$ ,  $d$  has no wings*

*OR  $\forall d \in D$ ,  $d$  does not have wings*

Some programs are structured

*$\exists$  a program  $p$  such that  $p$  is structured*

*OR  $\exists p \in P$  such that  $p$  is structured*

If a real number is an integer, then it is a rational number

*$\forall$  real numbers  $x$ , if  $x$  is an integer, then  $x$  is a rational number*

*OR  $\forall x \in R$ , if  $x \in Z$  then  $x \in Q$*

All bytes have eight bits

*$\forall x$ , if  $x$  is a byte then  $x$  has eight bits*

No fire trucks are green

# Formalize Statements

**Write the following informal statements in a formal language:**

All triangles have three sides

*$\forall$  triangles  $t$ ,  $t$  has three sides*

*OR  $\forall t \in T$ ,  $t$  has three sides*

No dogs have wings

*$\forall$  dogs  $d$ ,  $d$  has no wings*

*OR  $\forall d \in D$ ,  $d$  does not have wings*

Some programs are structured

*$\exists$  a program  $p$  such that  $p$  is structured*

*OR  $\exists p \in P$  such that  $p$  is structured*

If a real number is an integer, then it is a rational number

*$\forall$  real numbers  $x$ , if  $x$  is an integer, then  $x$  is a rational number*

*OR  $\forall x \in R$ , if  $x \in Z$  then  $x \in Q$*

All bytes have eight bits

*$\forall x$ , if  $x$  is a byte then  $x$  has eight bits*

No fire trucks are green

*$\forall x$ , if  $x$  is a firetruck then  $x$  is not green*

# In this Lecture

## We will learn

- Part 1: What is a predicate , and Predicate Logic
- Part 2: Universal and Existential Quantifiers:  $\forall$ ,  $\exists$
- Part 3: Formalize and Verablize Statements;
-  **Part 4: Different Writings of Quantified Statements;**
- Part 5: Tarski's World (Simple Example)

# Different Writings

$\forall x \in \text{Square} . \text{Rectangle}(x)$

$\forall x . \text{If } x \text{ is a square then } x \text{ is a rectangle}$

$\forall \text{Squares } x . x \text{ is a rectangle}$

Although the book uses this notation but it's not recommended as predicates are not clear.

$\forall p \in \text{Palestinian} . \text{Likes}(p, \text{Zatar})$

$\forall P . \text{Palestinian}(p) \wedge \text{Likes}(p, \text{Zatar})$

$\exists p \in \text{Person} . \text{Likes}(p, \text{Zatar})$

$\exists p . \text{Person}(p) \wedge \text{Likes}(p, \text{Zatar})$

# Quantifications might be Implicit

**Formalize the following:**

If a number is an integer, then it is a rational number.

If a person was born in Hebron then s/he is Khalili

People like Hommos are smart

# Quantifications might be Implicit

**Formalize the following:**

If a number is an integer, then it is a rational number.

$\forall n \cdot \text{Integer}(n) \rightarrow \text{Rational}(n)$

If a person was born in Palestine then s/he is Palestinian

People like Hommos are smart

# Quantifications might be Implicit

**Formalize the following:**

If a number is an integer, then it is a rational number.

$$\forall n \cdot \text{Integer}(n) \rightarrow \text{Rational}(n)$$

If a person was born in Palestine then s/he is Palestinian

$$\forall x \in \text{Person} \cdot \text{BornInPalestine}(x) \rightarrow \text{Palestinian}(x)$$

$$\forall x \in \text{Person} \cdot \text{BornIn}(x, \text{Palestine}) \rightarrow \text{Palestinian}(x)$$

People like Hommos are smart

# Quantifications might be Implicit

## Formalize the following:

If a number is an integer, then it is a rational number.

$$\forall n \cdot \text{Integer}(n) \rightarrow \text{Rational}(n)$$

If a person was born in Palestine then s/he is Palestinian

$$\forall x \in \text{Person} \cdot \text{BornInPalestine}(x) \rightarrow \text{Palestinian}(x)$$

$$\forall x \in \text{Person} \cdot \text{BornIn}(x, \text{Palestine}) \rightarrow \text{Palestinian}(x)$$

People like Hommos are smart

$$\forall x \in \text{Person} \cdot \text{Like}(x, \text{Homos}) \rightarrow \text{Smart}(x)$$

$$\forall x \in \text{Person} \cdot \text{LikeHomos}(x) \rightarrow \text{Smart}(x)$$

# In this Lecture

## We will learn

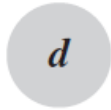

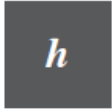

- Part 1: What is a predicate, and Predicate Logic
- Part 2: Universal and Existential Quantifiers:  $\forall$ ,  $\exists$
- Part 3: Formalize and Verablize Statements;
- Part 4: Different Writings of Quantified Statements;
- **Part 5: Tarski's World (Simple Example)**

# Tarski's World Example

The following statements are true or false?

$\forall t . \text{Triangle}(t) \rightarrow \text{Blue}(t).$

$\forall x . \text{Blue}(x) \rightarrow \text{Triangle}(x).$

$\exists y . \text{Square}(y) \wedge \text{RightOf}(d, y).$

$\exists z . \text{Square}(z) \wedge \text{Gray}(z).$
