(Q1) [60 points] Fill the blanks with true (T) or false (F).
] (1) If $E$ an elementary matrix of type II, then it is both nonsingular and symmetric.
] (2) If $A$ and $B$ are $n \times n$ symmetric matrices, then the matrix $A B+B A$ is also symmetric.
] (3) If $A$ is an $n \times n$ singular matrix, then the system $A x=b$ has infinitely many solutions.
] (4) If E is an elementary matrix of type III, then $E^{-1}=E$.
] (5) If $A$ and $B$ are symmetric matrices, then $A B$ is also symmetric.
] (6) If $A^{2}=I$, then $A^{-1}=A$.
] (7) The product of two elementary matrices is an elementary matrix.
] (8) Any $m \times n$ linear system $A x=0$ has a nontrivial solution if $m>n$.
] (9) If $A$ is a nonsingular matrix, then $A^{T}$ is nonsingular.
] (10) The sum of two triangular matrices is a triangular matrix.
] (11) If $E$ is an elementary matrix, then $E^{T}$ is also elementary of the same type.
] (12) If $A$ is a singular matrix, then the system $A x=0$ has infinite number of solutions.
] (13) If $A$ is a singular matrix and $U$ is the $R R E F$ of $A$, then $U$ must have al least one zero row.
] (14) Any invertible matrix is a product of elementary matrices.
] (15) If $A$ is symmetric and nonsingular, then $A^{-1}$ is symmetric.
] (16) All $5 \times 5$ nonsingular matrices are row equivalent.
] (17) If $A$ is a square matrix and the system $A x=0$ has a nontrivial solution, then $A$ is nonsingular.
] (18) If $A$ is an $n \times n$ nonsingular matrix, then $A^{3}$ is nonsingular.
] (19) If $A$ is a nonsingular matrix and $\alpha$ a nonzero scalar, then $(\alpha A)^{-1}=\alpha A^{-1}$.
] (20) If $A$ and $B$ are $n \times n$ diagonal matrices, then $A B=B A$.
] (21) If $A$ is a $3 \times 3$ matrix with $a_{1}=a_{2}=a_{3}$, then $A x=0$ has infinitely many solutions.
] (22) If $A$ and $B$ are nonsingular $n \times n$ matrices, then $A+B$ is also nonsingular.
] (23) If $A$ is both symmetric and skew-symmetric, then $A$ is a zero matrix.
] (24) If the system $A x=b$ is consistent, then $b$ is a linear combination of the columns of $A$.
] (25) A square matrix $A$ is nonsingular iff its RREF is the identity matrix.
] (26) If $b$ can be written as a linear combination of the columns of a singular matrix $A$, then the system $A x=b$ has infinitely many solutions.
] (27) If $A, B, C$ are $n \times n$ nonsingular matrices, then $A^{2}-B^{2}=(A-B)(A+B)$.
] (28) If $b$ is any column of the matrix $A$, then the system $A x=b$ is consistent.
] (29) The sum of a symmetric and skew-symmetric matrices is skew-symmetric.
] (30) Let $A$ be nonsingular. If $A$ is skew-symmetric, then $A^{-1}$ is skew-symmetric.
] (31) Let $A$ be nonsingular. If $A$ is upper triangular, then $A^{-1}$ is upper triangular.
] (32) Let $A$ be nonsingular. If $A$ is diagonal, then $A^{-1}$ is diagonal.
] (33) If $A$ is a $3 \times 3$ matrix and $(2,3,-1)^{T}$ is a solution to $A x=0$, then $(-6,-9,3)^{T}$ is also a solution.
] (34) If the square system $A x=b$ has more than one solution, then $A$ is singular.
] (35) If $A$ is a $4 \times 4$ nonsingular matrix, then $A A^{T}$ is both symmetric and nonsingular.
] (36) If $A$ is a $4 \times 4$ matrix and $A x=0$ has only the zero solution, then $A$ is row equivalent to $I$.
] (37) If $A$ is a nonsingular matrix, then $\left(A^{T}\right)^{T}=\left(A^{-1}\right)^{-1}$.
] (38) Every linear system with eight unknowns in three equations is consistent.
] (39) If the augmented matrix of a $3 \times 2$ system is row equivalent to $I$, then this system is inconsistent.
] (40) The identity matrix is row equivalent to any elementary matrix of the same size.
