

⇒ Tapping :-

- ① Forward ⇒ sum of the distance = L
- ② Backward ⇒ sum of the distance = L

Theoretical distance = L

calculations:-

$$AB \text{ avg} = (L_1 + L_2) / 2$$

$$\text{Error } (e) = |AB \text{ avg} - L|$$

$$R_p = 1 / (AB \text{ Avg} / e)$$

⇒ Mapping :-

* offset Method :-

* ties Method :-

Link
⇒ closed leveling :-

- given :- hBM₁, hBM₂

- Measure : B.S, I.S, F.S

• elevations (بؤنوس) و ارتفاعات (ارتفاعات) ←

- Checks :-

$$① \text{ * of setup} = \text{ * T.p} + 1$$

$$② \text{ * B.S} = \text{ * F.S}$$

$$③ \sum B.S - \sum F.S = \text{Elev. L.P} - \text{Elev. F.P}$$

$$④ \sum \text{Elev. all point} - \text{Elev. B.M}_1 = [\sum (\text{HT} * (\text{ * I.S} + \text{ * F.S}))] - \sum \text{I.S} - \sum \text{F.S}$$

→ Discrepancy Error = h B.M calculated - h B.M known

→ Tolerance error (m) = $C \sqrt{K}$ K → kilometre

→ correction (ci) = $-\frac{E}{n}$ * setup using to find the elevation

دائرة مغلقة، انقياس الارتفاعات المحسوبة بالنقطة بالقياس الى نقطة واحدة * نقيس الارتفاعات

$$K = \frac{(\sum D.F.S + \sum D.B.S)}{B.S, F.S} \times 1000 \rightarrow D = (v_1 - v_3) \times 100$$

→ Measuring height of object using Stadia Method:

→ Known: H.B.M

→ measured:

r_1, r_2, r_3 → to the B.M

r_1, r_2, r_3 → point B

HA → a

HA → b

ZA → BM/A

ZA → P/A

ZA → C/A

H.I at the Station

→ Calculation:-

$$\textcircled{1} H_{BM} = H_A + H.I. + \frac{V_{A-BM} - r_2_{BM}}{100}$$

$$V = \frac{1}{2} K r \sin 2(ZA)$$

$$r = \frac{(r_1 - r_3)_{BM}}{100}$$

To calculate H_A

$$\textcircled{2} D_{AB} = \frac{K r \sin^2 ZA}{(r_1 - r_3)_B} \quad \text{B/A}$$

$$\textcircled{3} c = 180^\circ - a - b$$

$$\textcircled{4} D_{AC} = \frac{\sin \left(\frac{H_A b}{D_{AB}} \right)}{\sin c} D_{AB}$$

$$\textcircled{5} V = \frac{D_{AC}}{\tan^2 ZA}$$

$$\textcircled{6} h_c = H_A + H.I. + V$$
