Computer Vision: Car detection

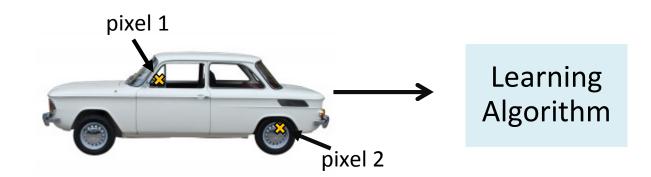

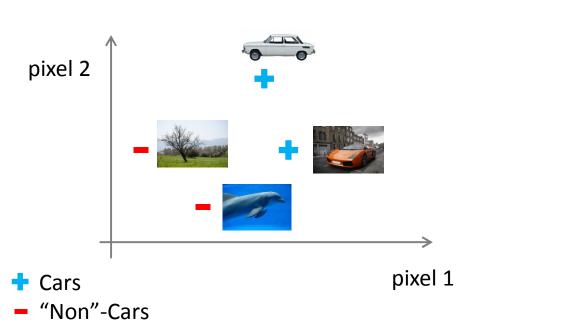

Testing:

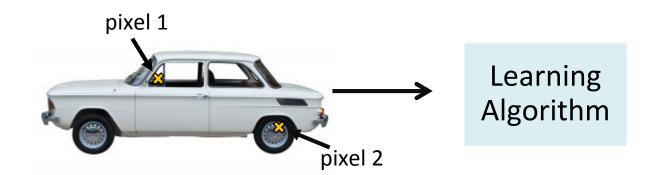

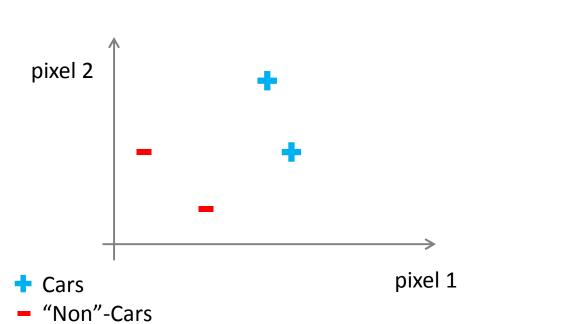

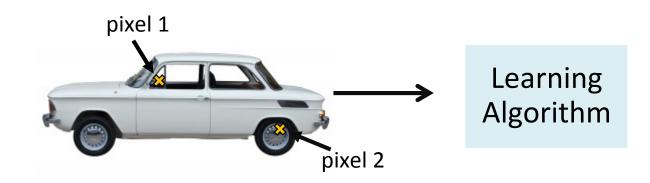

What is this?

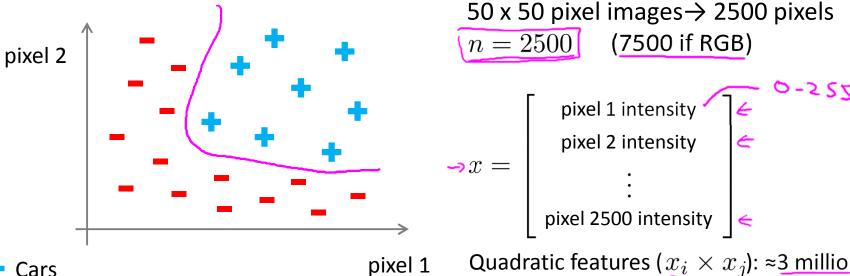

Cars "Non"-Cars Quadratic features ($x_i \times x_j$): ≈ 3 million features

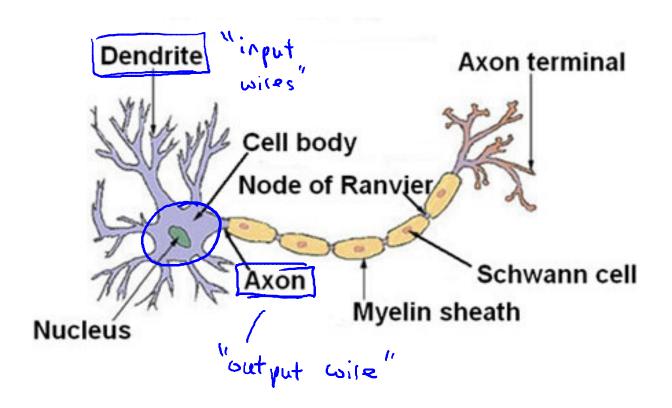

Machine Learning

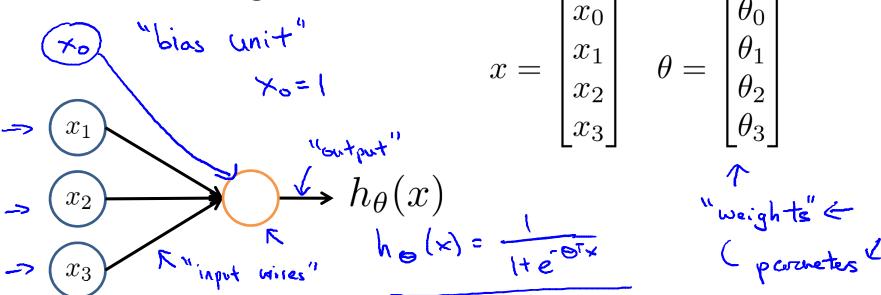

Neural Networks: Representation

Model representation I

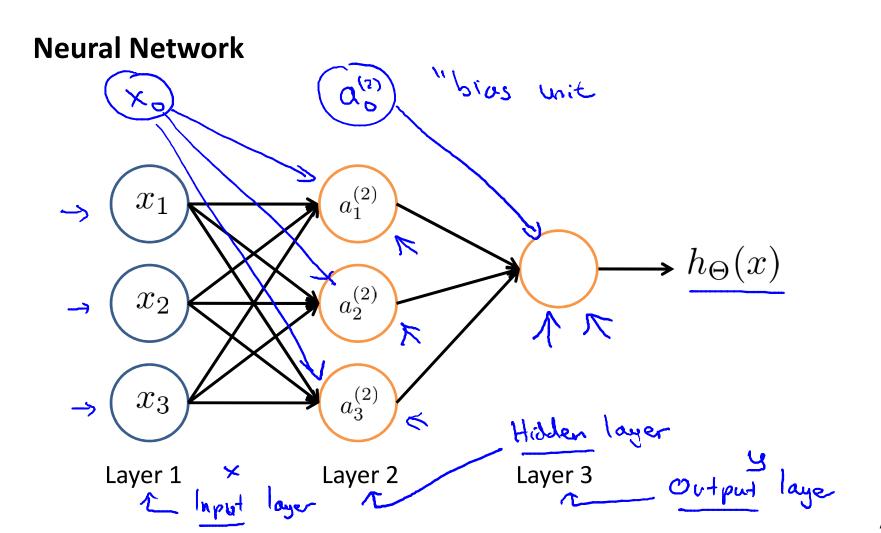

Neuron in the brain

Neuron model: Logistic unit

Sigmoid (logistic) activation function.

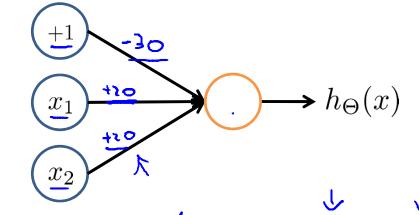

Neural Network $\rightarrow a_i^{(j)} =$ "activation" of unit i in layer j $\rightarrow \Theta^{(j)} = \text{matrix of weights controlling}$ function mapping from layer j to $\Theta^{(i)} \in \mathbb{R}^{3\times 4}$ layer j+1YO(x) , hidden wit $\Rightarrow a_1^{(2)} = g(\Theta_{10}^{(1)}x_0 + \Theta_{11}^{(1)}x_1 + \Theta_{12}^{(1)}x_2 + \Theta_{13}^{(1)}x_3)$ $\Rightarrow a_2^{(2)} = g(\Theta_{20}^{(1)}x_0 + \Theta_{21}^{(1)}x_1 + \Theta_{22}^{(1)}x_2 + \Theta_{23}^{(1)}x_3)$ $\Rightarrow a_3^{(2)} = g(\Theta_{30}^{(1)}x_0 + \Theta_{31}^{(1)}x_1 + \Theta_{32}^{(1)}x_2 + \Theta_{33}^{(1)}x_3)$ $h_{\Theta}(x) = a_1^{(3)} = g(\Theta_{10}^{(2)} a_0^{(2)} + \Theta_{11}^{(2)} a_1^{(2)} + \Theta_{12}^{(2)} a_2^{(2)} + \Theta_{13}^{(2)} a_3^{(2)})$

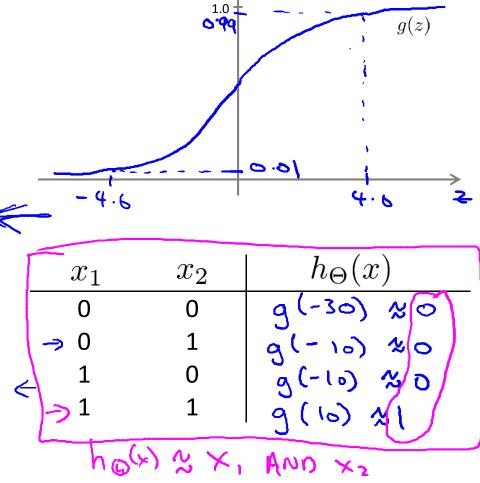

If network has s_j units in layer j, $\underline{s_{j+1}}$ units in layer j+1, then $\underline{\Theta^{(j)}}$ will be of dimension $\underline{s_{j+1}} \times (\underline{s_{j}} + \underline{1})$. $\underline{\varsigma}_{j+1} \times (\underline{\varsigma}_{j} + \underline{1})$

Simple example: AND

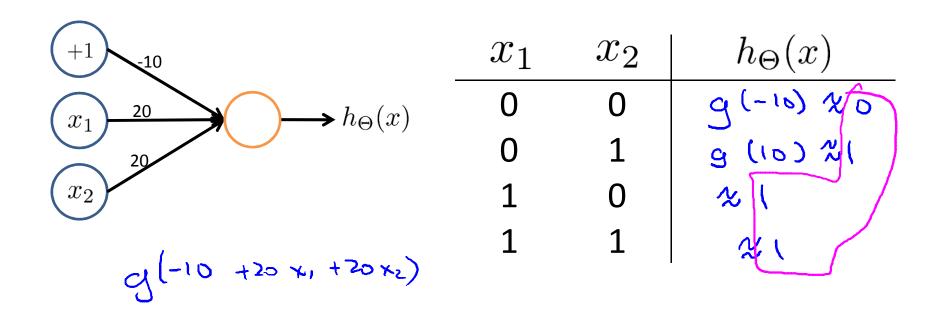

$$x_1, x_2 \in \{0, 1\}$$

$$\rightarrow y = x_1 \text{ AND } x_2$$

Example: OR function

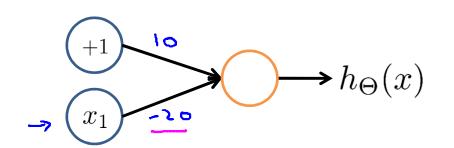

$$\rightarrow x_1 \text{ AND } x_2$$

 $\rightarrow x_1 \text{ OR } x_2$

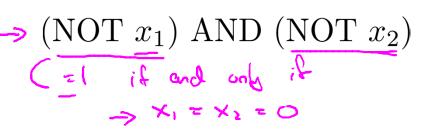

Negation:

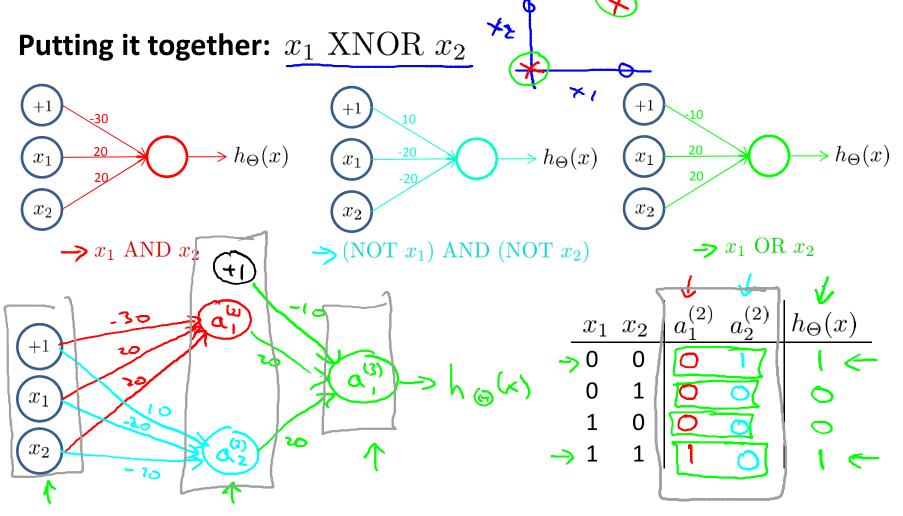

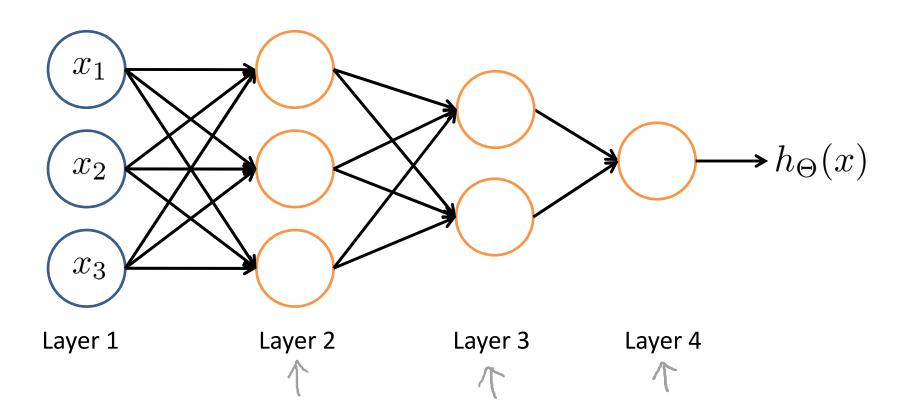

x_1	$h_{\Theta}(x)$
0	9(10) 21
1	9 (-10) 20

$$h_{\Theta}(x) = g(10 - 20x_1)$$

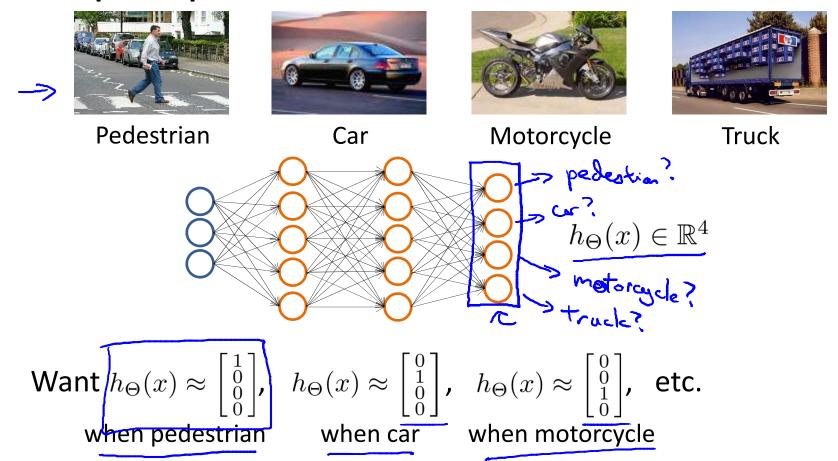

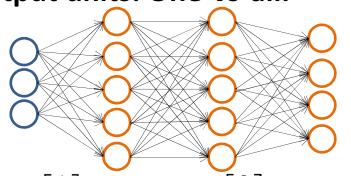

Neural Network intuition

Multiple output units: One-vs-all.

Multiple output units: One-vs-all.

$$h_{\Theta}(x) \in \mathbb{R}^4$$

Want
$$h_{\Theta}(x) \approx \begin{bmatrix} 1 \\ 0 \\ 0 \\ 0 \end{bmatrix}$$
, $h_{\Theta}(x) \approx \begin{bmatrix} 0 \\ 1 \\ 0 \\ 0 \end{bmatrix}$, $h_{\Theta}(x) \approx \begin{bmatrix} 0 \\ 0 \\ 1 \\ 0 \end{bmatrix}$, etc.

when pedestrian when car when motorcycle

Training set:
$$(x^{(1)}, y^{(1)}), (x^{(2)}, y^{(2)}), \dots, (x^{(m)}, y^{(m)})$$

Training set:
$$(x^{(1)}, y^{(1)}), (x^{(2)}, y^{(2)}), \dots, (x^{(m)}, y^{(m)})$$

$$y^{(i)} \text{ one of } \begin{bmatrix} 1\\0\\0\\0 \end{bmatrix}, \begin{bmatrix} 0\\1\\0\\0 \end{bmatrix}, \begin{bmatrix} 0\\0\\1\\0 \end{bmatrix}, \begin{bmatrix} 0\\0\\1\\0 \end{bmatrix}, \begin{bmatrix} 0\\0\\1\\0 \end{bmatrix}, \begin{bmatrix} 0\\0\\1\\0 \end{bmatrix}, \begin{bmatrix} 0\\0\\0\\1 \end{bmatrix}$$
